CASHES LEDGE NATIONAL MARINE SANCTUARY NOMINATION

July 2024

Conservation
Law Foundation

I. SECTION I – BASICS

Nomination Title: Cashes Ledge National Marine Sanctuary.

Nominators request that the selection of the Proposed Sanctuary's name be determined during the scoping process to ensure broad public participation, engagement, and input.¹

Nominator Name(s) and Affiliation(s): Conservation Law Foundation

Nomination Point of Contact: Dr. Priscilla Brooks, Vice President, Ocean Conservation, Conservation Law Foundation, 62 Summer St., Boston, MA 02110, (617) 860-1737, pbrooks@clf.org.

II. SECTION II – INTRODUCTION

A. Narrative Description

The Gulf of Maine is one of the most productive ecosystems in the world. It plays a significant role in the history and culture of New England and is the foundation for a coastal economy characterized by commercial and recreational fishing, aquaculture, recreational boating, beachgoing, shipping, and tourism. At its heart lies an extraordinary undersea mountain range and one of the most unique ecological structures in U.S. ocean waters. This 32-mile underwater expanse of sharply rising, submerged granite ridges comprise the Cashes Ledge, Sigsbee Ridge, and Parker Ridge formations; together with the deep reaches of Cashes Basin and Ammen Basin that flank the mountain range, this "Cashes Ledge Area" supports a treasure trove of marine life among its diverse terrain. In this relatively small expanse of ocean, the Cashes Ledge Area encompasses all the bottom types typical of the offshore Gulf of Maine—each supporting its own interacting mix of species, and altogether remarkable and rich biodiversity. On the top and flanks of its highest peak, Ammen Rock, lies the deepest, densest cold-water kelp forest on the eastern seaboard and the jewel in the crown of the Cashes Ledge Area. Rising hundreds of feet off the ocean floor to within 30 feet of the surface, Ammen Rock punctures ocean currents and forces water to swirl around and over the underwater mountain range. The resulting mix of nutrient- and oxygen-rich water fosters a vibrant diversity of marine plants, fish, invertebrates, marine mammals, and seabirds.

Striking patterns of biodiversity occur over the wide depth range and different bottom types found in the area. The marine communities situated along the top and sides of these long ridges are characterized by high productivity, high growth rates of benthic invertebrates, and high predation by fish and other predators, resulting in an exceedingly productive and unique offshore ecosystem. The base of the ridges and adjacent basins support a variety of soft substrate-dwelling organisms and delicate biogenic habitat structure, fueled by the high productivity at shallower depths. Much of the Cashes Ledge Area is vital habitat for supporting large numbers of a variety of fish species. Cashes Ledge and Cashes Basin are also a hotspot for species richness and abundance of marine mammals. The Cashes Ledge Area provides a glimpse back in time to an undisturbed Gulf of Maine, prior to the influences of human industrial activities and where abundant large predatory fish still play a dominant role in the ecosystem. Taken as a whole, the result is a highly productive, inter-connected, and unique offshore system that constitutes one of

the most comprehensive opportunities for biodiversity and climate stewardship in the North Atlantic.

A locally led coalition of diverse supporters has sought to secure the protection of Cashes Ledge for nearly a decade. With this nomination we build on that effort and seek the designation of the Cashes Ledge Area as a National Marine Sanctuary (“Proposed Sanctuary”). A sanctuary designation in this area will help conserve and protect the extraordinary and vulnerable marine wildlife and habitats of the Cashes Ledge Area, provide unparalleled scientific research and education opportunities, build climate resilience in a region that is among the fastest warming in the world’s oceans, and help secure a healthy marine ecosystem upon which the region’s coastal communities depend.

A sanctuary designation will complement existing regulatory and management efforts by the National Marine Fisheries Service (NMFS), regional fishery management councils, and the Atlantic States Marine Fisheries Commission (Commission) to conserve and manage resources found at the Cashes Ledge Area, and, such efforts should include consultation with Tribal Nations and Indigenous communities and their respective natural resources or fisheries departments. It will also provide more comprehensive and coordinated management of other exceptional resources in the area, while providing an exciting platform for research and monitoring, public education, and marine stewardship.

The Proposed Sanctuary will preclude incompatible activities such as oil, gas, and mineral extraction, and offshore wind development to protect vulnerable fish and wildlife populations and support the Tribal Nations and Indigenous communities, coastal communities, fisheries, and tourism industries that depend on a healthy ocean ecosystem. The Proposed Sanctuary includes a fully protected area that prohibits all extractive and otherwise damaging activities to safeguard the biodiversity of the rare, intact kelp forest and interconnected, adjacent habitats, in the face of dramatic climate impacts. Permanent protection of this fully protected area will also provide a living laboratory for research and a better understanding of the marine environment, allowing resource managers and scientists to study the impacts of climate change in the offshore Gulf of Maine waters apart from additional human impacts.

B. Goals Description

The primary goal of the Cashes Ledge National Marine Sanctuary is to conserve and protect the extraordinary and vulnerable marine wildlife and habitats of the Cashes Ledge Area. The Proposed Sanctuary will support the management and conservation of the remarkable diversity of species and habitats that make up the Cashes Ledge Area’s marine ecosystem for future generations. Additional goals of the Proposed Sanctuary are to:

- **Enhance opportunities for scientific research and monitoring:** The Proposed Sanctuary will increase opportunities for scientific research and monitoring on a multitude of topics in marine ecology, oceanography, and fisheries science. The fully protected area will provide a crucial natural laboratory to study ecosystem function and monitor climate change impacts on the health of the Gulf of Maine in the absence of the confounding influences of extractive and otherwise damaging activities.
- **Foster collaborative conservation:** The Proposed Sanctuary will enable diverse tribal, federal, state, local, and private partnerships to promote the benefits of marine

conservation amid the current climate and biodiversity crises and foster a coordinated and comprehensive approach to conservation and management that facilitates related educational and scientific opportunities.

- **Increase ocean-climate and natural and cultural heritage awareness and participation:** The Proposed Sanctuary will increase opportunities to build upon formal and informal ocean education and awareness efforts in the region that honor its rich marine natural resources and cultural heritage and recognize the Gulf of Maine's uniquely accelerated climate change impacts.
- **Advance the goal of conserving and restoring the Nation's lands and waters for the benefit of all people:** The Proposed Sanctuary is a locally led, collaborative conservation effort that will help safeguard the biodiverse Cashes Ledge Area for the benefit of the Nation. The Proposed Sanctuary will contribute to the scientific recommendation to conserve at least 30% of the earth's land and ocean by 2030 to stem biodiversity loss and build resilience against climate change.²
- **Enhance and promote sustainable fisheries, tourism, and recreation:** The Proposed Sanctuary will advance a comprehensive management scheme that promotes the long-term sustainability of blue economies. The Proposed Sanctuary will increase the Cashes Ledge Area's climate resilience and sustain its outstanding biodiversity and fragile habitats through layers of protection including well-managed, multi-use areas.

A Cashes Ledge National Marine Sanctuary is an investment in the future of the Gulf of Maine and will help ensure that its exceptional natural heritage is available for future generations.

C. Location Description

The center of the Proposed Sanctuary sits approximately 90 miles (mi) from the coastlines of Portland, ME, Portsmouth, NH, and Gloucester, MA (see Figure 1) and encompasses an area of approximately 766 square miles (sq. mi.). The Proposed Sanctuary includes a fully protected area encompassing approximately 25% of the total area or roughly 194 sq. mi. (see Consideration 1). The Cashes Ledge Area constitutes approximately 2.1% of the Gulf of Maine by area and 0.2% of the U.S. East Coast exclusive economic zone. The Proposed Sanctuary comprises roughly 60% of the size of New Hampshire's White Mountain National Forest.

The Proposed Sanctuary encompasses the full contiguous underwater mountain range and overlying water column formed by Cashes Ledge, Parker Ridge, and Sigsbee Ridge, along with portions of the ecologically inter-connected adjacent deep basins (see Figure 2). Central to the Cashes Ledge Area is a sharply rising granitic ridge with widely spaced

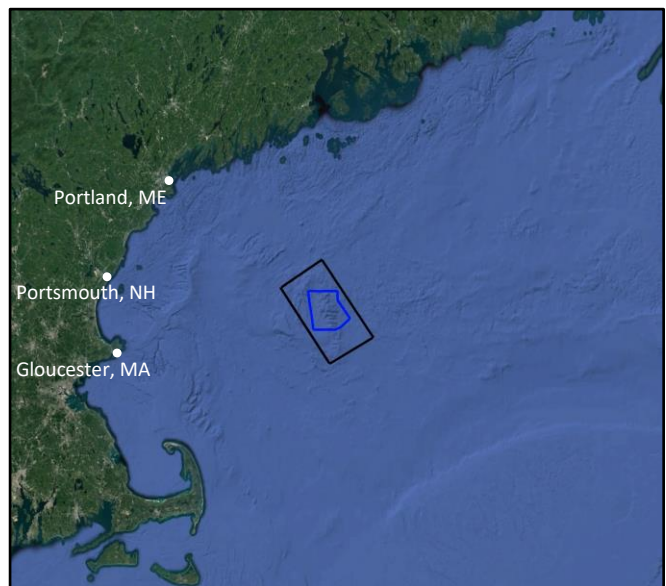

Figure 1: Map of the Proposed Sanctuary (black) including the fully protected area (blue); centered near 43° N, 69° W.

pinnacles and knolls that runs generally parallel to the coast and extends approximately 32 mi from the southeastern extent of Parker Ridge, through Cashes Ledge itself, to the northeastern tip of Sigsbee Ridge. Flanking this underwater mountain range are the deeper reaches of Cashes Basin to the west and Ammen Basin to the east with maximum depths of approximately 725 feet (ft).³

Figure 2: Map of the Proposed Sanctuary (black) including the fully protected area (blue).

The highest peak on Cashes Ledge, Ammen Rock rises to within 30 ft of the surface. Ammen Rock is a dome-shaped, steeply sloping granite bedrock outcrop that is home to unusual biological and topographic diversity, including the kelp forest and associated marine life.

Surrounding the exposed bedrock of Ammen Rock and adjacent pinnacles of Cashes Ledge are cascading slopes and talus fields of cobble and large boulder outcroppings reminiscent of the slopes of the White Mountains on land, interspersed with patches of sand and gravel. Sand and gravel plains extend deeper than 250 ft to the base of the ridge, with sand and silt carpeting the deeper depths in the adjacent basins.

I. SECTION III – CRITERIA INFORMATION

1. **National Significance Criteria 1:** *“The area’s natural resources and ecological qualities are of special significance and contribute to: biological productivity or diversity; maintenance or enhancement of ecosystem structure and function; maintenance of ecologically or commercially important species or species assemblages; maintenance or enhancement of critical habitat, representative biogeographic assemblages, or both; or maintenance or enhancement of connectivity to other ecologically significant resources.”*

A Mosaic of Habitats: The Cashes Ledge Area remains one of the best opportunities for biodiversity and climate stewardship in the North Atlantic. Far from the influence of coastal pollution and benefiting from two decades of commercial fishing restrictions (see Consideration 5), the biodiversity of the Cashes Ledge Area is still largely intact. This diversity is underpinned by a high degree of seafloor complexity over a large depth range, with a complex mosaic of bottom types, including bedrock, boulder fields, gravel, sand, and silt/mud bottoms. The Proposed Sanctuary is thus unique because in a relatively small area and nested within the multiple water masses typical of the Gulf of Maine it contains all of the representative bottom types found across the offshore Gulf of Maine—each supporting its own interacting mix of species.⁴ The highly complex topography engenders high diversity, high prey subsidy, and high connectivity among adjacent habitats (Figure 3).⁵ A defining feature is the densest and deepest kelp forest on the eastern seaboard, while vibrant seafloor communities and abundant pelagic species also characterize the area. The multiple habitats and depth zones are intricately inter-connected through oceanography, trophic interactions, and dispersal of life stages. By encompassing the entire underwater mountain range of Cashes Ledge, Sigsbee, and Parker Ridges, along with portions of the adjacent deep Ammen and Cashes Basins, the Proposed Sanctuary supports the conservation of these inter-connected habitats and communities, offering significant ecosystem benefits in a relatively small area.

Productivity: High productivity stemming from the confluence of ocean currents is a major factor underlying

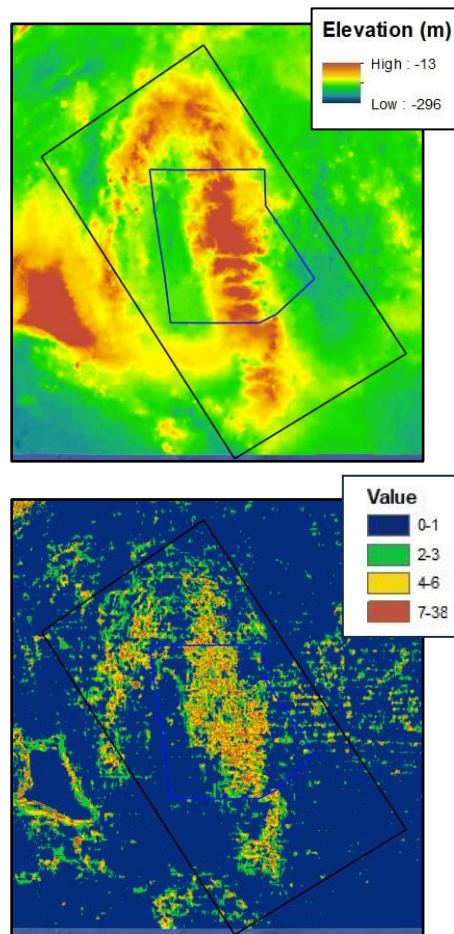

Figure 3: Bathymetry (upper panel) and topographic roughness index (lower panel). Reproduced from Kraus et al. (2016).

the ecological health and diversity of the Cashes Ledge Area's ecosystem. These currents, heavily influenced by Gulf of Maine oceanographic gyres, provide a constant supply of cold, nutrient-laden waters.⁶ Due to its prominence in the water column, the ridge of the Cashes Ledge Area intersects the ocean currents and the layered water masses characteristic of the offshore Gulf of Maine (typified by Maine surface, intermediate and deep-water regimes),⁷ mixing plankton with nutrient-rich water. This mixing helps create an environment ideal for marine life, and, at shallow depths exposed to sunlight—such as on Ammen Rock—leads to vibrant benthic plant life.

A stunning oceanographic phenomenon known as “internal waves” yields even more biological productivity in this highly dynamic area, essentially serving as a food elevator to the seafloor. Generated by the steep topography and stratified water column around Ammen Rock, these internal waves push warm water from the upper levels of the water column against the peaks and slopes of the ridge, driving it down to mix with the colder depths and delivering a rich supply of plankton to the bottom habitat.⁸ The warm water then rises back to the upper photic zone where it is again pushed along Cashes Ledge and forced downward. This process repeats itself 20 to 25 times each day during the late spring through fall, producing drastic fluctuations in water temperature and plankton supply. Each time an internal wave passes through, temperature changes of as much as 9 degrees centigrade occur and phytoplankton on the bottom (100 ft depth) increases two-to three-fold.⁹ Enhanced water flow at the shallower peaks of Cashes Ledge is also biologically significant to organisms living on the bottom. Between 225 and 100 ft deep, currents speed up more than three-fold along the Cashes Ledge “ramp” and promote high growth rates of benthic invertebrates.¹⁰ Taken together, the marine communities situated along the top and sides of the long ridge of Cashes Ledge reflect an incredible dynamism, characterized by high productivity, high growth rates of benthic invertebrates, and high predation by demersal fish and likely other predators such as squid.¹¹ In turn, this shallow productivity trickles down to the communities at the base of the ridge and adjacent basins in ways that have yet to be fully explored.

Species & Assemblages

Kelp Forests: On the top and flanks of Ammen Rock lies the densest and deepest kelp forest on the eastern seaboard.¹² Resembling kelp forests in coastal regions at half the depth and thriving at deeper depths likely due to the clarity of water and greater light penetration¹³—the kelp forest on Ammen Rock stands out as one of the most unique ecological structures in the Gulf of Maine. As is the case for kelp forests worldwide, the kelp at Ammen Rock are important ecosystem engineering species, providing complex three-dimensional biogenic habitat for a wide range of organisms.¹⁴ The offshore kelp forest at Cashes Ledge is also denser and supports a more robust fish assemblage than coastal areas, where a combination of factors has led to the degradation of many kelp forests. Researchers who have spent decades studying the region via SCUBA diving surveys have described the kelp forest community at Ammen Rock as an “oasis of unusually high kelp and fish abundance in the Gulf of Maine.”¹⁵

There are three main kelp species in the Gulf of Maine, all of which are found at Cashes Ledge. The shallowest portion of the Ammen Rock kelp forest is dominated by Laminarian kelp (sugar kelp, *Saccharina latissima*, and horsetail kelp, *Laminaria digitata*) up to 20 ft tall.¹⁶ Deeper than 100 ft, shotgun kelp (*Agarum clathratum*) becomes more dominant. For the canopy-forming

sugar kelp, average biomass at Ammen Rock has been recorded to be 3 orders of magnitude greater and density up to 162 higher compared to coastal sites at similar depth; these are the greatest levels of biomass and density recorded for this species in the western North Atlantic.¹⁷ To the south of Ammen Rock, a deeper kelp forest (90 ft and below) also exists at Ammen Rock Pinnacle, where initial surveys conducted via submersible suggested that, based on its morphology and anatomy, the dominant *Laminaria* kelp may represent a unique species, distinct from coastal regions.¹⁸ Whether this is the case or whether it represents a deep-water phenotype of *Laminaria digitata* awaits genetic confirmation.

The ecological role of the kelp extends beyond the immediate habitat offered by the structural aspects of the kelp forests themselves. As has been shown for shallower kelp ecosystems of similar composition elsewhere in the northwestern Atlantic, kelp detritus (i.e., kelp particles that have eroded and broken free over time) drifting down from the kelp forests likely provides a key source of energy to deeper, lower productivity waters.¹⁹ Supporting this hypothesis, detached kelp plants have been observed in the basins flanking Cashes Ledge from submersibles at depths greater than 260 ft.²⁰ Currents flowing along the ridge and reversing with the tide²¹ likely transport the kelp detritus and contribute to a stream of nutrients and energy to waters all around the ridge, providing a food source to support the vibrant benthic community of invertebrates. The intent of the Proposed Sanctuary, including the fully protected area (see Consideration 1), is to encompass both the kelp forests and the adjacent deeper waters that are energetically linked to the kelp and shallower processes.

Invertebrate Communities: The diversity of bottom types in the Cashes Ledge Area provides habitat for a wide variety of bottom-dwelling invertebrates, including bright orange, red and yellow sponges, sub-arctic species of sea stars, brittle and feather stars, sea squirts, sea pens, sea anemones, worms, northern shrimp, horse mussels and myriad encrusting bryozoans. These animals form vibrant communities along the ridges' depth gradient, establishing identifiable shallow, intermediate, and deep-water zones.²² Although these species can be found in other deep rocky habitats along the New England and southern Nova Scotia coast, the topography, geographic setting, and enhanced productivity of Cashes Ledge has produced communities with uniquely different compositions and that occupy different depth ranges than in those coastal habitats.²³ Several newly discovered and un-named species of sponges occur at Cashes Ledge including one extremely rare species of blue sponge that has only been seen in rock wall communities at Cashes Ledge.²⁴ The horse mussel beds provide biogenic habitat structure and refuge for other marine invertebrates and serve as mini biodiversity hotspots on their own.²⁵ The species richness of invertebrates at Northern Ammen Rock Pinnacle (a nearby peak north of Ammen Rock proper) is higher than at any rock wall site at comparable depths in the Gulf of Maine, with densities of up to 14.6 species per 0.25 m².²⁶ Benthic data analysis of the greater Cashes Ledge

Area confirms high biodiversity at Ammen Rock and the ridge of Cashes Ledge, and also at Parker Ridge and in the deeper waters of Ammen and Cashes Basins (see Figure 4).²⁷

In the shallow zone, which extends down to a depth of approximately 130 ft, the kelp forest habitat provides support and shelter for a diverse array of organisms (Figure 5). Kelp-dominated patches at the tops of the ridges are often intermixed with large aggregations of sea anemones (*Metridium senile*).²⁸ Encrusting and mobile invertebrates proliferate in part due to the abundance of kelp.²⁹ An intermediate zone characterized by abundant suspension feeding invertebrates begins below the kelp-dominated zone and continues to approximately 200 – 230 ft where the continuous rock slope ends. A particularly vulnerable species of large sea anemone (*Urticina crassicornis*)³⁰ and orange sea stars (*Hippasteria phrygiana*) are common predators in this range. Other prevalent invertebrates include brachiopods, small crinoids and ascidians, and crustose coralline algae covers much of the substrate. Soccer ball-sized yellow mounding sponges (*Mycale lingua*) dot the seascape on these deep rocky slopes.³¹ From 230-250 ft the slope begins to level off and the continuous bedrock of the shallow and intermediate zones gives way to a mixture of boulders, cobble, gravel, sand, and muddy bottoms. In this deep zone, sponges, brachiopods, and colonial ascidians are found attached to cobble and hard substrate, while the soft bottom benthic community contains numerous tube worms (*Myxicola infundibulum*), mud anemones (*Cerianthus borealis*) and northern shrimp (*Pandalus borealis*).³² Such burrowing organisms dominate in the deepest parts of the Area, below 250 ft, characterized by muddy sand and fine silts.

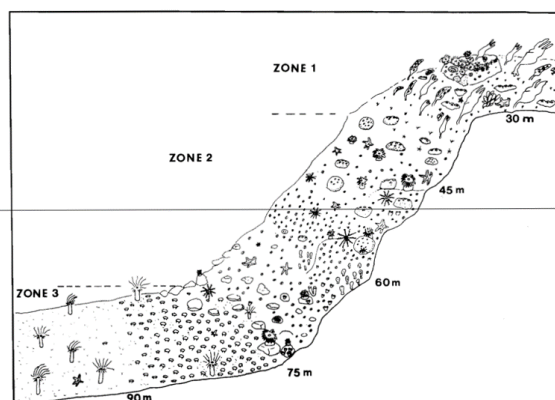

Figure 5: Schematic of benthic invertebrate community zonation from observations made at Ammen Rock Pinnacle. Reproduced from Witman and Sebens (1988).

Fish: The Cashes Ledge Area provides key habitat and supports large numbers of a variety of fish species, including Atlantic wolffish, cod, monkfish, haddock, pollock, redfish, white hake, silver hake, and American plaice.³³ Many of these species are depleted stocks subject to overfishing, overfished, or both. For example, the Gulf of Maine haddock stock is subject to overfishing; Gulf of Maine Atlantic cod is both subject to overfishing and overfished; and, Atlantic wolffish is overfished with possession prohibited.

A large portion of the region is designated as essential fish habitatⁱ for species such as Atlantic cod, haddock, pollock, monkfish, American plaice, white hake, witch flounder, and halibut. For example, the rocky cobble and gravel substrates of Cashes Ledge are critical for juvenile Atlantic cod; its sandy and algal dominated areas serve as habitat for pollock eggs, larvae, and juveniles; and its deep muddy areas are essential habitat for white hake. On Ammen Rock, average fish biomass is 305 times greater than in coastal kelp communities at the same depth and numerical density more than twice the average in temperate western North Atlantic waters, which is likely from a combination of complex habitat, associated feeding opportunities, and fishing protections.³⁴

ⁱ See 16 U.S. Code § 1802(10) (“Essential fish habitat” means those waters and substrate necessary for fish for spawning, breeding, feeding or growth to maturity.).

The Proposed Sanctuary, and the kelp forest on Ammen Rock specifically, provide important juvenile and adult habitat for one historically significant predator finfish in particular: Atlantic cod.³⁵ Cod are depleted in waters throughout New England, and older, larger, more productive cod are increasingly rare.³⁶ Analyses of cod caught inside the Cashes Ledge Groundfish Closure Area (see Figure 12), including some areas that fall within the Proposed Sanctuary's boundaries, relative to adjacent outside waters have shown greater length and age inside the closed area, suggesting that the closure is having a successful impact; greater gut fullness and differences in stable isotopic signatures also indicate greater availability of prey resources and a broader range of prey types.³⁷

Figure 6: Two Atlantic cod caught on the same line at Cashes Ledge: one an olive cod (thought to be a more migratory form) and the other a red cod (thought to be resident in the area). From Sherwood and Grabowski (2010).

Ammen Rock has also been shown to support a significantly higher abundance of cod compared to coastal kelp sites,³⁸ and cod up to three feet long have been found within the relatively shallow kelp forest there.³⁹ Cashes Ledge even hosts a resident form of “red cod” (see Figure 6): an effect likely due to some combination of diet, environmental conditions, and possibly genetics.⁴⁰ Juvenile cod are also abundant in the kelp forest, which likely provides an important refuge from predators.⁴¹

Large pelagic fish species are also common in the Cashes Ledge Area, with blue sharks, basking sharks, and ocean sunfish often sighted.⁴² Some limited recreational fishing for bluefin tuna occurs in the area and observations have been reported of bluefin tuna herding Atlantic herring against the slope of Cashes Ledge.⁴³

Marine Mammals and Sea Turtles:

In addition to thriving benthic and fish communities, the Cashes Ledge Area is seasonally home to a wide variety of larger marine species. The Gulf of Maine overall supports a large diversity of marine mammals relative to more southern continental shelf areas along the eastern

seaboard.⁴⁴ Sightings data are in some cases limited in spatial and seasonal coverage, but analysis of available data in the Cashes Ledge Area shows a high species richness and abundance of whales and dolphins (including up to 11 species), particularly over Cashes Ledge itself and in the area over Cashes Basin just to the west, and that the central portion of the Proposed Sanctuary is a hotspot for whales and dolphins relative to adjacent waters (Figure 7).⁴⁵ Critically endangered North Atlantic right whales use the area⁴⁶ as do endangered sei whales.⁴⁷ Relative to other parts of the Gulf of Maine, the Cashes Ledge Area is also a region of high abundance for humpback, minke, and fin whales, especially during the summer months, and multiple

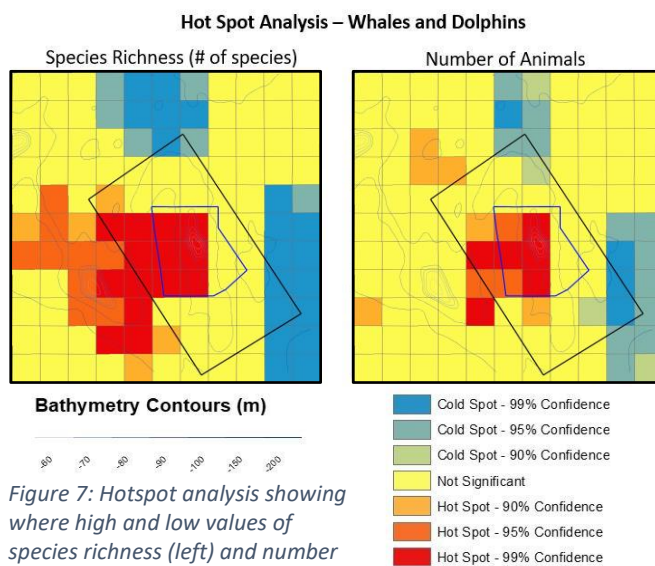

Figure 7: Hotspot analysis showing where high and low values of species richness (left) and number of animals (right) cluster in the proposed area and vicinity based on sighting survey data (1963-2014). Reproduced from Kraus et al. (2016).

odontocete species have been observed (including sightings of harbor porpoise, pilot whales, and bottlenose, Risso's, common and white-sided dolphins), presumably drawn to the area's plentiful feeding grounds.⁴⁸ Sea turtles are mostly associated with warmer water regions, and data are limited, but endangered loggerhead and leatherback sea turtles move seasonally into the offshore Gulf of Maine in summer, likely including the Cashes Ledge Area.⁴⁹

Seabirds: Seabirds have not been well studied in the Cashes Ledge Area, but sightings data and habitat modeling show that a large variety of birds use the area, including the black-legged kittiwake, Cory's shearwater, double-crested cormorant, great black-backed gull, great shearwater, herring gull, Leach's storm-petrel, northern fulmar, northern gannet, pomarine jaeger, red-necked phalarope, and Wilson's storm-petrel, as well as the Atlantic puffin, a species listed as vulnerable by the International Union for Conservation of Nature.⁵⁰ Tracking studies using electronic tags also confirm the central Gulf of Maine to be an overwintering ground for the Atlantic puffin while away from summertime breeding colonies off Maine.⁵¹

Ecosystem Structure and Function: Cashes Ledge provides a window into how the undisturbed Gulf of Maine once looked, prior to the influence of human industrial activities. Comparisons to similar locations in coastal Maine where populations of commercial groundfish species are generally depleted have suggested that the high abundance of large fish such as cod, pollock and wolffish leads to an ecosystem where their predation still plays a dominant role.⁵² For example, kelp forests in many regions, including the coastal Gulf of Maine, have suffered from enhanced grazing by surging sea urchin populations released from predation due to the depletion of the commercial fish species that naturally regulate their populations. But at Cashes Ledge, where there exist healthier populations of predatory fish, scientists hypothesize that these fish maintain natural food web interactions that regulate sea urchin populations, allowing the kelp to thrive.⁵³ In turn, the healthy kelp forests provide key habitat and cover from predators for juvenile cod,⁵⁴ demonstrating how maintenance of complex predator-prey interactions can create positive feedback loops and support biogenic habitat.

Beyond the kelp forest on Ammen Rock, the ecosystem dynamics in the Proposed Sanctuary have been less studied but tantalizing glimpses of those dynamics suggest a rich complexity. For example, at bottom depths immediately deeper than the kelp forests, filter feeders dominate, fueled by the strong currents generated by the ramping topography and primary production settling from shallower depths.⁵⁵ As hard substrate gives way to mud and silt along the deep margins of Cashes Ledge and into the adjacent basins, much of the habitat structure in these deep soft substrate communities is biogenic, consisting of burrows, pits and delicate thickets of projecting tubes of mud anemones.⁵⁶ In the overlying water column, aggregative patterns of zooplankton and micronekton and interactions with higher predators have not been examined, but, from studies at nearby Platts Bank, active internal waves interacting with the shallow topography and swimming behaviors may serve to concentrate zooplankton prey like krill for Atlantic herring, which are then themselves prey for a variety of seabirds, including gulls, shearwaters, and storm-petrels, and marine mammal predators.⁵⁷ Overall, species interactions within and among the different habitats constitute key directions for additional future research.

Ecosystems with high abundances and diversity of species such as the largely intact Cashes Ledge Area also have greater capacity to resist, recover from, and adapt to stressors associated

with change, including warming and extreme events such as heatwaves and storms. At the species level, healthy and more abundant populations are more resilient to stress, while at the ecosystem level, more diverse ecological communities are more likely to maintain natural ecosystem interactions and function; this latter effect might provide an “insurance policy” that ecosystem functioning will be maintained even if some species decline.⁵⁸

Ecological connectivity, or the degree to which important habitats are linked through transport of eggs and larvae or active movements, is an important consideration in siting protected areas that can also facilitate shifts in range and natural communities in response to climate change.⁵⁹ The connectivity of the diverse plant, fish, and invertebrate communities of the Proposed Sanctuary with other ecologically significant locations in the region is an area of ongoing investigation, but initial studies indicate the Cashes Ledge Groundfish Closure Area could serve as both a source and recipient of egg and larval transport for a variety of species.⁶⁰ Specifically, analyses of dispersal pathways in surface currents indicate that sites off coastal Maine can act as sources of cod larvae to the Cashes Ledge Groundfish Closure Area. In turn, the Cashes Ledge Groundfish Closure Area can act as a source of larvae to coastal regions in the Western Gulf of Maine off New Hampshire and Massachusetts, as well as a source of larvae to the Cashes Ledge Groundfish Closure Area itself (i.e., self-recruitment).⁶¹

2. National Significance Criteria 2: *“The area contains submerged maritime heritage resources of special historical, cultural, or archaeological significance, that: individually or collectively are consistent with the criteria of eligibility for listing on the National Register of Historic Places; have met or which would meet the criteria for designation as a National Historic Landmark; or have special or sacred meaning to the indigenous people of the region or nation.”*

Paleogeographic significance: The Cashes Ledge Area has a fascinating paleogeographic history. The geological contours of Cashes Ledge were formed by the same natural forces that created the slopes of Acadia National Park and the Presidential Range in the White Mountain National Forest.⁶² Samples collected at Ammen Rock pinnacle reveal a granite composition⁶³—thought to be Ordovician;⁶⁴ the Cashes Ledge Area is believed to be the “seaward extension” of the same rocks that form New England’s coast.⁶⁵ And though today the Cashes Ledge Area is submerged, the entirety of the Gulf of Maine is thought to have remained above sea level from the Early Jurassic period (190 million years ago) to the early Eocene (55 million years ago).⁶⁶

Archaeological, cultural, and historical significance: The Gulf of Maine has been tied to North American history and culture for millennia. Archeologists and historians believe that the entirety of the continental shelf contains the possibility of prehistoric remains as a result of both the period of time that the continental shelf spent above sea level followed by an intensity of shipping off the U.S. northeastern coast.⁶⁷ Fishing is thought to have occurred in the Gulf of Maine since prehistoric times.⁶⁸ Indigenous knowledge, archaeological information, and written and oral history document Tribal Nations and Indigenous communities’ long-time dependence on and relationship with the Gulf of Maine both materially and spiritually. For example, ancestors of Maine’s present-day Wabanaki Nations—Maliseet, Micmac, Penobscot, and Passamaquoddy, known collectively as the Wabanaki⁶⁹—have been fishing all along the Maine coastline for thousands of years.⁷⁰ And more than 5000-year-old fish bones collected in Penobscot Bay suggest cod was an important food source.⁷¹

As early as 1616, there is documented interest in the commercial fishing potential of the Gulf of Maine.⁷² The first known map to indicate Cashes Ledge as an important geological feature in the Gulf of Maine dates back over two centuries ago. Captain Cyprian Southack presented “A New Chart of the English Empire in North America” in 1717, and identified Cashes Ledge in what was the first engraved map printed in the present-day United States (see Figure 8).⁷³ Despite appearing on Captain Southack’s 1717 map, Cashes Ledge was likely not regularly fished commercially until the mid-1800s. Atlantic cod was the fourth highest export from the American colonies heading into the Revolutionary War and a review of 1,500 of the earliest available cod fishing logs from New England ports (dated to the mid-19th century) was used to extrapolate overall catch based on fishing patterns within the logs, indicating that Cashes Ledge was not a common fishing ground at the time.⁷⁴ However, in 1887, when U.S. Fish Commissioner Goode first attempted to describe the Gulf of Maine’s fishing grounds, the Cashes Ledge Area was among the three furthest distances to be charted.⁷⁵ Goode’s report described Cashes Ledge at the time as “not now a very important fishing ground except for a brief period in the spring, although it is resorted to somewhat by the shore fishermen in summer and fall, when good trips are usually obtained.” By the next report of Cashes Ledge in 1929, the U.S. Bureau of Fisheries “found it furnishing at least its quota in recent years and in apparently increasing volume” and that the “principal fishing on these grounds is for cod, haddock, hake, and cusk.”⁷⁶

Figure 8: “A new chart of the English Empire in North America,” McCorkle, B.B., *New England in Early Printed Maps*, photo available from John Carter Brown Library.

Based on the National Oceanic and Atmospheric Administration’s (NOAA) Office of Coast Survey’s Automated Wreck and Obstruction Information System Database, there are no known shipwrecks in the Proposed Sanctuary. Shipwrecks dating back to the 1920s are found outside but near to the Proposed Sanctuary,⁷⁷ however, and it is conceivable that a more in-depth exploration of the sort that might be facilitated by the Proposed Sanctuary will reveal more, increasing the public’s access to the area’s maritime heritage (see Consideration 1).

3. National Significance Criteria 3: “The area supports present and potential economic uses, such as: tourism; commercial and recreational fishing; subsistence and traditional uses; diving; and other recreational uses that depend on conservation and management of the area’s resources.”

New England and its coastal communities, including those that border or are near the Gulf of Maine, have long been economically dependent on a healthy ocean ecosystem. As recognized by NOAA’s Office of National Marine Sanctuaries (ONMS), “[a] healthy ocean is the basis for thriving recreation, tourism and commercial activities that drive coastal economies.”⁷⁸ NOAA’s most recent marine economy report finds that, as of 2021, ocean resources supported more than 250,000 jobs and \$23.7 billion in economic activity in New England.⁷⁹ More than 66% of these jobs and \$11.6 billion of this economic activity come from the tourism and recreation sector

including the whale watching, recreational fishing, and seabird viewing industries.⁸⁰

Tourism and Recreational Uses: In addition to fishing, coastal communities bordering the Gulf of Maine are highly dependent upon tourism and recreation. Across the entire Northeast region, the top five waterfront and marine recreation activities are beachgoing, scenic enjoyment, swimming/body surfing, biking/hiking, and wildlife viewing.⁸¹ While the offshore location of the Cashes Ledge Area currently limits broad public access, a Sanctuary designation will significantly increase regional and national awareness and interest in this remarkable area, sparking additional efforts to view and enjoy the area by the public. Already, some whale watching, recreational fishing, diving, and seabird viewing have occurred in the Proposed Sanctuary. For example, this past October 2023, FLUKES International Whale Tours led a natural history tour to the Cashes Ledge Area aboard the ship Friendship V with guides from FLUKES, Bar Harbor Whale Watch, Field Guides, Maine Audubon, and PhotosbyMike.⁸² Passengers, naturalists, and expert photographers on the all-day whale and seabird trip encountered finback whales, Atlantic bottlenose dolphins, shearwaters, terns, gulls, gannets, fulmars and more.⁸³

Commercial and Recreational Fishing: The Gulf of Maine has long supported an active fishing culture and industry, and the industry continues to support the region's economy. Ancestors of Maine's present-day Wabanaki Nations have been subsistence fishing along the Maine coastline for thousands of years,⁸⁴ and members of the Wabanaki Nations continue to fish today. The most recently assessed total commercial landings of seafood in New England amounted to 447.7 million pounds (2022) at a dockside value of \$1.4 billion, with recreational fishing landings amounting to 39.9 million pounds.⁸⁵ Within Maine alone, Maine's Department of Marine Resources' most recently assessed commercial landings (2023) amounted to 204.7 million pounds, at a dockside value of \$611.3 million in value.⁸⁶

A combination of the jagged underwater topography and regulatory measures have limited commercial groundfishing activity in the Cashes Ledge Area. First charted as a fishing ground in the late 1880s, commercial fishing was the initial, predominant human use of the Cashes Ledge Area post European settlement.⁸⁷ While fishermen initially avoided the area due to its topographic roughness,⁸⁸ by the 1920s, they were nonetheless harvesting cod, haddock, and other species in the Cashes Ledge Area. By the end of the 20th century, commercial trawl fishing became common with the advent of new technologies, such as "rock-hopper" gear that enabled trawling over rocky sea floors.

Today, both commercial and recreational fishing in the Cashes Ledge Area are managed by NMFS in coordination with the councils under the Magnuson-Stevens Fishery Conservation and Management Act (MSA) and with the Commission under the Atlantic Coastal Fisheries Cooperative Management Act, and other applicable laws. NMFS currently prohibits the use of all gear capable of catching groundfish in the Cashes Ledge Groundfish Closure Area with additional restrictions in the Cashes Ledge, Ammen Rock, and Fippennies Ledge Habitat Management Areas (see Consideration 5). However, numerous fishing gears are still allowed in the Cashes Ledge Area, including lobster pot gear, mid-water trawl gear, purse seines, and limited pelagic gears. Outside of and adjacent to the groundfish mortality closure while still within the Proposed Sanctuary boundaries, there is substantial commercial groundfishing effort, particularly to the east and southeast of the closure. The data available indicates limited

recreational fishing occurs in the Cashes Ledge Area in part based on its distance from shore.

Offshore Energy: Offshore wind development planning is currently underway in the Gulf of Maine (see Consideration 5). On March 15, 2024, the Bureau of Ocean Energy Management (BOEM) designated a final Wind Energy Area in the Gulf of Maine and on May 1, 2024, BOEM issued a Proposed Sale Notice⁸⁹ identifying eight potential lease areas.⁹⁰ The final Wind Energy Area currently excludes the Cashes Ledge Groundfish Closure and nearly all of the Proposed Sanctuary. None of the proposed lease areas⁹¹ are within the Proposed Sanctuary boundary (see Figure 12).⁹²

Deep Sea Cables: There are no known submarine cables or plans for wind energy transmission cables or related infrastructure, likely due to the extreme topography of the area (see Consideration 5).

Shipping: The Cashes Ledge Area is situated approximately 114 mi from Boston, MA, and 90 mi from Portland, ME—the largest and second largest tonnage seaports in New England, respectively. The Port of Portland is one of the largest oil ports on the East Coast.⁹³ In 2023, the Port of Portland brought in an estimated 44,000 20-foot-equivalent shipping containers;⁹⁴ and in 2020, a City of Portland-commissioned study estimated that Portland Harbor contributes approximately \$800 million of total economic output via industrial marine, commercial fishing, recreational, and tourism activities.⁹⁵ The Port of Boston is New England’s only full-service container terminal, supporting \$8.2 billion in economic impact annually with 66,000 jobs.⁹⁶ With roughly 2.3 million metric tons of cargo passing through the Port of Boston each year, the Conley Terminal services approximately 2,500 businesses and 15 million people.⁹⁷ A review of data collected from vessels carrying Automatic Identification System (AIS) transponders shows limited numbers of recreational and commercial vessels transiting over the Cashes Ledge Area in 2022. The current traffic separation schemes, which direct vessels in and out of these very busy ports, do not extend as far offshore as the Cashes Ledge Area, so there is no formal routing of vessels in the waters over and around the area.

Ecosystem Services: In addition to the more readily quantified ecosystem services of recreation, tourism, food/fisheries production, and transportation, the Cashes Ledge Area may provide important services related to its role in the regional carbon cycle. In the offshore Gulf of Maine, likely including the Cashes Ledge Area, some carbon sequestration occurs through burial of organic carbon in the bottom sediments of the deep basins.⁹⁸ Much of this stems from phytoplankton productivity in the overlying water column that makes its way through the food web and ultimately settles to the bottom as particulate organic matter. In the basins of the Cashes Ledge Area this may also be supplemented by carbon derived from kelp. Kelp detrital production and pathways are not well studied at Ammen Rock, but globally the production of kelp detritus through erosion and dislodgement accounts for 82% of annual kelp primary production⁹⁹ and detached kelp plants have been observed on the seafloor in the basins flanking Cashes Ledge.¹⁰⁰ In addition to subsidizing energetically the benthic communities at depths deeper than the kelp forest (see Criteria 1), some fraction of the organic carbon derived from this sinking kelp detritus, likely reworked by passage through the benthic food web, may ultimately be buried in the sediments of the deep basins and thus sequester carbon. While ecosystem services associated with burial and sequestration of kelp-derived carbon in continental shelf slopes and the deep ocean have received increased attention,¹⁰¹ the potential for sequestration of organic carbon from

kelp in shelf sediments has been explored less and represents a research avenue for the region.

4. National Significance Criteria 4: “The publicly derived benefits of the area, such as aesthetic value, public recreation, and access to places depend on conservation and management of the area’s resources.”

The Cashes Ledge Area is a biological treasure that represents the best example of a relatively undisturbed Gulf of Maine ecosystem. Home to myriad, and often vulnerable, marine species and habitats, a sanctuary designation in this area will help provide scientific research opportunities, support the rebuilding of New England’s depleted fish populations, and maintain high-quality habitat for ocean wildlife. The Cashes Ledge Area comprises a high degree of habitat variability with multiple bottom types over short spatial scales (see Criteria 1). Further, as the Gulf of Maine warms faster than most ocean areas on the planet,¹⁰² the still largely intact benthic habitats and diversity of the Cashes Ledge Area constitute one of the most comprehensive opportunities for biodiversity and climate stewardship in the Gulf of Maine.

Public Access: The Proposed Sanctuary will create new opportunities to access nature by creating physical and virtual engagement and collaboration opportunities for communities that foster understanding of marine habitats and wildlife, deepening their connection with the ocean and nature in New England’s own backyard. There is strong support for marine protected areas in New England; a 2022 survey of adults living in New England states found that a healthy ocean is vital to many aspects of the region’s well-being and there is wide support for permanently protecting ocean waters in the region (81%; 51% strongly).¹⁰³ The top five reasons given to support a

marine protected area include 1) protection of endangered species (71%); 2) helping damaged ocean habitats and ecosystems (69%); 3) providing fish and marine mammal populations areas for feeding, breeding, and nursing (66%); 4) restoring fish populations to support New England’s fishing industry (61%); and protecting ocean habitats and wildlife, such as cold-water corals and kelp beds (61%).¹⁰⁴ Such efforts to increase public access through awareness and education of this special place will in turn facilitate inclusive outreach to the entire, diverse New England public through the development of community-grounded, accessible resources. Such efforts

Figure 9: Images captured at the Cashes Ledge Area

should also prioritize serving communities that have historically lacked access to nature and outdoor spaces, as well as ensure that engagement resources are provided in multiple languages. Sanctuary programs in the Atlantic¹⁰⁵ support numerous opportunities for citizen science, K-12 and college educational programs, volunteer opportunities, wildlife viewing, and more (see Consideration 2). Through similarly structured opportunities, a Sanctuary will enhance access to the Cashes Ledge Area, bringing alive this magnificent place to communities through virtual programs and at sea expeditions.

Aesthetic Value: The Nation’s public lands and waters are world-renowned for their beauty and attract visitors in all seasons. The Gulf of Maine is no different. The Cashes Ledge Area contains unrivaled, natural phenomena and areas of exceptional natural beauty. On dive expeditions to the Proposed Sanctuary, National Geographic photojournalist Brian Skerry captured the Cashes Ledge Area’s dramatic and spectacular array of marine life (see Figure 9) recalling: “[w]hat can be seen in those sun-bathed shallows . . . is not found anywhere else in the Gulf. Colorful kelp forests, anemones, and sponge colonies support a remarkably diverse collection of marine life, from cod and cunner fish to horse mussels and sea stars.”¹⁰⁶ A Sanctuary that protects such incomparable, undersea beauty will serve the public through the area’s ability to inspire, delight, and bring wonder. Described as the “Yellowstone of the North Atlantic,” the Cashes Ledge Area’s capacity for aesthetic value is unequivocal.¹⁰⁷

II. SECTION IV – CONSIDERATION INFORMATION

1. Management Consideration 1: *“The area provides or enhances opportunities for research in marine science, including marine archaeology.”*

Cashes Ledge has long attracted marine scientific research (*as summarized under* Criteria 1), although a wide variety of important and outstanding questions remain. The Proposed Sanctuary will provide additional opportunities for research and, most importantly, a platform for enhancing the understanding of climate change impacts and associated changing patterns of biodiversity in the Gulf of Maine. The Proposed Sanctuary includes a fully protected areaⁱⁱ where all extractive and otherwise damaging activities will be prohibited, including harvesting, removing, taking, injuring, destroying, collecting, moving, or causing the loss of any Proposed Sanctuary resource (see Figures 2, 10). Centered on the Ammen Rock kelp forest and encompassing adjacent, inter-connected habitats, the fully protected area will have the goals of conserving biodiversity, building climate resilience, and facilitating research. In addition to conserving biodiversity and engendering ecosystem resilience to climate change, full protection of this sub-area will allow investigation of a multitude of questions in the absence of any additional human impacts, providing an unparalleled reference site for identifying and understanding the impacts of climate change in the Gulf of Maine.

Potential topics that could be examined within the Proposed Sanctuary include:

ⁱⁱ See e.g., ONMS, Channel Islands National Marine Sanctuary, *Marine Reserves*, <https://channelislands.noaa.gov/marineres/> (last visited June 26, 2024); see e.g., Proposed Research Area Within the Gray’s Reef National Marine Sanctuary, 76 Fed. Reg. 63,824 (Oct. 14, 2011) (In 2011 NOAA created a research area within Gray’s Reef National Marine Sanctuary—prohibiting all fishing, diving, and stopping a vessel while transiting in the research area.).

- Study of climate change impacts on organisms, habitats, ecological interactions, and oceanography in the Proposed Sanctuary and Gulf of Maine as a whole;
- Further exploration of patterns of biodiversity in relation to habitat type, including historically under-sampled ecosystem components such as microbes;¹⁰⁸
- Bioenergetic linkages between habitats, notably between the benthos and water column, and between the kelp forests and deeper regions;
- Kelp detrital pathways and other mechanisms for carbon export and sequestration;
- Fisheries-related investigations including use of essential fish habitat and patterns of movement within the Proposed Sanctuary and between the Proposed Sanctuary and outside;
- Larval connectivity between the Cashes Ledge Area and other regions, and related investigations of recruitment;
- Bio-physical interactions between pelagic zooplankton, micronekton, and fish with oceanographic processes and topography;
- Predator-prey interactions including with the many mobile higher predators in the region;
- Acoustic ecology studies, defining biological and anthropogenic soundscapes to identify fish and cetacean diversity, behaviors, habitat use and effects of human disturbance;
- Investigation of the archaeological, cultural, and maritime heritage of the Cashes Ledge Area; and
- Evaluation of productivity impacts and large-scale changes within the Proposed Sanctuary as compared to the Gulf of Maine's Wind Energy Area.

The 194 sq. mi. fully protected area (see Figure 10) will encompass bottom depths ranging from 30 to more than 700 ft and the full range of bottom types typical of the region, including

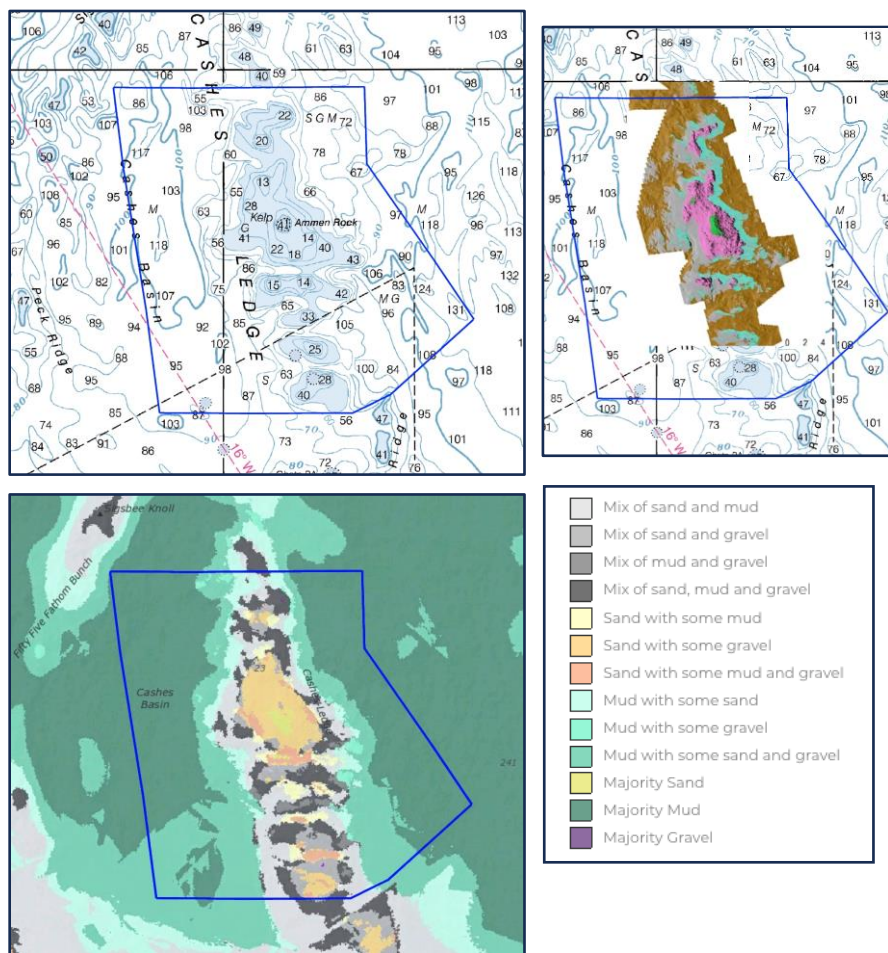

Figure 10: Top left: Proposed Sanctuary's fully protected area (blue line) relative to bathymetry (fathoms). Top right: Bottom types and associated communities: kelp forest (green), bedrock (pink), sand (cyan), gravel (grey), and mud/silt (brown) communities from multi-beam mapping validated by drop camera sampling (reproduced from Calvert and McGonigle, 2020). Bottom left: Soft sediment type for the greater area surrounding Cashes Ledge (2020 update to the 2010 TNC Northwest Atlantic Marine Ecoregional Assessment; Greene et al. 2010).

bedrock, boulder/cobble, gravel, sand, and mud/silt bottom types. The associated interconnected biological communities described above will thus be fully represented, along with the entirety of the kelp forests on Ammen Rock and Ammen Rock Pinnacle. Sampling outside of the fully protected area will provide a basis for comparison, and many of the research topics listed above could be pursued in the greater Sanctuary as well as in the fully protected area.

Permanent and full protection will allow this fully protected area—with its representative habitats and communities across broad depth zones—to be used as a natural laboratory for monitoring and teasing apart the effects of large-scale climate impacts on the Gulf of Maine from local impacts such as fishing and pollution, using the invaluable early surveys of Cashes Ledge from the 1980s as baseline data.

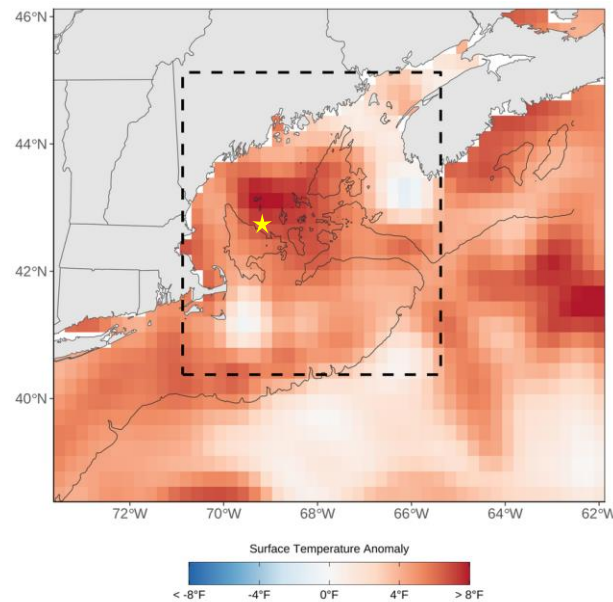

Figure 11: Sea surface temperature anomalies in summer 2022 relative to the long-term average (1982-2011). Darker red indicates stronger anomalies and greater warming. Yellow star indicates approximate location of Ammen Rock. Map reproduced from Gulf of Maine Research Institute's Gulf of Maine Warming Update: Summer 2022.

The importance of climate change impacts on the Gulf of Maine cannot be overstated. The past five years (2019–2023) have been some of the warmest on record¹⁰⁹ and waters are currently warming faster than 97% of the global ocean.¹¹⁰ The area appears to be especially susceptible to warming due to large-scale processes, including an increase in the influence of the Gulf Stream. A wide variety of impacts on benthic and pelagic organisms are being observed throughout the region.¹¹¹ Within the overall Gulf of Maine area, there is also spatial variability and differences over the course of the year in warming trends: warming has been especially pronounced in the central Gulf of Maine and Cashes Ledge Area during summer (see Figure 11).¹¹² As these trends continue, the scientific value and importance of protecting this portion of Cashes Ledge as a living laboratory and oceanographic research platform only increase.

2. Management Consideration 2: “The area provides or enhances opportunities for education, including the understanding and appreciation of the marine and Great Lakes environments.”

A Cashes Ledge National Marine Sanctuary could serve as a vital educational resource to help connect the public to the ocean, build appreciation for its unique features, and foster a sense of ocean stewardship. Ocean education could be facilitated and strengthened through established land-based and at-sea college and K-12 education programs, staff speaking engagements, film nights, online webinars, and booths at community festivals.¹¹³ Citizen volunteer opportunities will encourage public participation in the Proposed Sanctuary, including through volunteer data review regarding the amazing wildlife found in the Cashes Ledge Area. Through research, resource protection and education, sanctuary staff and volunteers could work together to protect and enhance its natural and cultural heritage for future generations. The Proposed Sanctuary

could engage with students through marine art contests, an ambassador program, internship opportunities, as well as classroom educational resources for educators.¹¹⁴ Given the success of existing Sanctuary programs, replicated efforts with Cashes Ledge will provide the opportunity to increase access to the benefits that the Gulf of Maine marine ecosystem can provide.

Further, the Cashes Ledge Area has already been used to educate the public and inspire environmental stewardship by numerous institutions. For example, Cashes Ledge-dedicated exhibits are currently displayed at the Seacoast Science Center’s Dynamic Gulf of Maine Exhibition.¹¹⁵ In February 2023, the Gulf of Maine EcoArts and Maine Maritime Museum debuted a yearlong art and natural science exhibition on the rich ecosystem of Cashes Ledge in the Gulf of Maine, developed with a goal of inviting “reflection on our collective human impact on our shared oceans in hopes of preserving their future.”¹¹⁶ Cashes Ledge was also previously featured in the “Majestic Fragility” exhibit at Bigelow Laboratory for Ocean Sciences in 2021,¹¹⁷ as well as in an exhibit at the Harvard Museum of Natural History’s Marine Life in the Putnam Family Gallery that debuted in 2015.¹¹⁸ Additionally, there is a wealth of universities, institutions, and organizations with strengths in marine science in the New England region and Cashes Ledge has long attracted marine scientific research (*as summarized in* Criteria 1). Research has facilitated collaborative outreach and education efforts including through projects launched to explore the Cashes Ledge Area’s wonders by National Geographic,¹¹⁹ Mission Blue,¹²⁰ and the Rozalia Project.¹²¹ Most recently in 2023, a scientific expedition to Ammen Rock was conducted by academic research institutions including Brown University, University of Florida, and Bigelow Laboratory for Ocean Sciences (see Consideration 3). In July 2024, GBH launched a three-part documentary series, *Sea Change: The Gulf of Maine*, which will showcase this 2023 expedition, including by exploring Cashes Ledge as a vantage point for how the Gulf came to be.¹²² These exhibits and research expeditions not only demonstrate the ability of the Proposed Sanctuary to engage the public, but also reflect local interest in connecting with this unique place as a living classroom and protecting it for future generations.

3. Management Consideration 3: “Adverse impacts from current or future uses and activities threaten the area’s significance, values, qualities, and resources.”

The greatest assets of the Cashes Ledge Area—its productivity, biodiversity, complex habitat, and regional significance—are also its greatest vulnerabilities if not adequately conserved. Maintaining and enhancing the abundance and diversity of species, and diversity of habitats, in the Cashes Ledge Area ecosystem will require comprehensive management that considers all existing and potential threats and development of a plan to manage them now and into the future with those goals in mind. The Proposed Sanctuary will consider overlapping activities, their associated stressors, and the interactions between these stressors, holistically.¹²³

Fisheries: Fishery management actions have provided some protections to the Cashes Ledge Area (see Consideration 5), but they are focused on achieving optimum yield from managed species in the area, not protecting the ecosystem for the purpose of maintaining biodiversity. The current conservation and management measures in the Cashes Ledge Area were promulgated under the MSA and include (1) fishing restrictions that limit the gear types that can be used; (2) essential fish habitat designations for council managed species (through Habitat Management Areas); and (3) measures to rebuild overfished stocks (through the groundfish closure) (see Consideration 5). But future adverse effects in the Proposed Sanctuary from a plethora of threats

exist because existing management measures are limited in scope and not permanent and can be modified or removed through fishery management actions.

One reason this is problematic is because the area's bottom invertebrate communities are typically highly vulnerable to human disturbance. While these communities currently experience a low rate of disturbance, modeling simulations indicate that, if damaged by extractive or otherwise damaging activities including fishing, recovery rates of these invertebrate species range from 7 to more than 200 years, with rarer species taking a longer amount of time.¹²⁴ Another reason is that the deep-sea kelp forests are particularly susceptible to damage from fishing gears like otter trawl nets that drag the ocean's floor as well as fixed gears like pots and gill nets. Although kelp is known to re-grow within one to two years of removal, it would take many years for the tall kelp forests found on Cashes Ledge pinnacles to return to their current stature if stripped clear by mobile fishing gear or significantly shredded by repeated impact from lines, hooks, traps, or other human influences. Further, certain fishing gear destroys seafloor habitat and diversity by removing or severely damaging rock structures and other components that comprise seafloor habitat. For example, overfished Atlantic wolffish are just one of many species that need the deep crevices among rocky boulders to survive and thus would be negatively affected by fishing gear that removed or spread out boulders: after spawning wolffish eggs are hidden in nests from predators, where they are guarded exclusively by an adult male for the next three to nine months.¹²⁵

The Proposed Sanctuary's fully protected area will help NMFS meet its duties to prevent overfishing, rebuild overfished stocks, achieve optimum yield, and identify "actions to encourage the conservation and enhancement of" essential fish habitat.¹²⁶ The fully protected area will also help NMFS achieve the purposes of the MSA, which include conserving and managing fishery resources off the coasts of the United States, promoting domestic commercial and recreational fishing under "sound conservation and management" principles, as well as promoting the protection of essential fish habitat.¹²⁷ Finally, the very definition of "conservation and management" in the MSA includes rebuilding, restoring, and maintaining council-managed species, as well as avoiding irreversible or long-term adverse effects on the marine environment.¹²⁸ The fully protected area will also facilitate sustaining managed species within the Proposed Sanctuary to perform their functional roles. This will allow the Proposed Sanctuary to meet the National Marine Sanctuaries Act's purpose to "maintain the natural biological communities in the national marine sanctuaries, and to protect, and, where appropriate, restore and enhance natural habitats, populations, and ecological processes."¹²⁹ The Proposed Sanctuary will also contribute to the scientific recommendation to conserve at least 30% of the earth's lands and waters while advancing sustainable fisheries management.¹³⁰

Climate Change: The impacts of climate change on the ocean, as well as the associated and ongoing global biodiversity crisis, create an urgent need to build resilience into the region's ocean ecosystem (see Criteria 1). Ocean warming is leading to shifts in the distribution and abundance of multiple species in the Gulf of Maine. The impacts of warming are particularly acute for species such as kelp, as well as for Atlantic cod for which the Gulf of Maine is near the southernmost extent of the species' North Atlantic range.¹³¹ On Ammen Rock, declines in sugar kelp abundance between initial surveys in the 1980s and a recent survey in 2015 were attributed to the rapid warming of the Gulf of Maine system, and the 2012 heat wave in particular, in combination with the spread of an invasive species of white bryozoan (*Membranipora*

membranacea) encrusting the kelp blades.¹³² Analyses from a 2023 scientific expedition to the Cashes Ledge Area are underway, and preliminary analysis suggests that while overall kelp abundance remains high, the proportion of sugar kelp relative to horsetail kelp has continued to decline and that the percent coverage of the invasive red alga (*Dasyatispongia japonica*) has increased substantially.¹³³

In addition to providing a vital opportunity to study the system without the confounding effect of fishing or additional human impacts, protecting these most pristine yet still vulnerable kelp forests of the Gulf of Maine will maximize their resilience in the face of continued warming.¹³⁴ Kelp forests are also increasingly recognized as playing an important role in climate change mitigation through storage and sequestration of carbon (i.e., as a form of “blue carbon”).¹³⁵ In the Gulf of Maine, the sediments of the deep basins sequester carbon¹³⁶, and in the Cashes Ledge Area this may include organic carbon derived from the kelp (see Criteria 3). Preventing disturbance of the sedimentary basins as well as the kelp forests of the fully protected area will thus allow the system to continue to contribute to its full capacity to the regional carbon cycle.

Energy Development and Minerals Mining: New industrial uses of the ocean threaten ocean resources worldwide and the Gulf of Maine, including the Cashes Ledge Area, is not isolated from these threats.¹³⁷ While the Gulf of Maine and other offshore areas in New England are not currently the subject of offshore oil and gas exploration and development, that is not true of wind energy development. Offshore wind energy planning is currently underway in the Gulf of Maine.¹³⁸ BOEM announced a Final Wind Energy Area in the Gulf of Maine in March 2024 that excludes the Cashes Ledge Groundfish Closure and nearly all of the Proposed Sanctuary (see Figure 12). In May 2024, BOEM released a Proposed Lease Sale Notice that excludes the area of the Proposed Sanctuary.¹³⁹ While not well understood, it is expected that offshore wind energy development will result in direct and indirect impacts to marine habitat and biological communities from construction and operation. Adverse impacts that pose a potential threat to the area of the Proposed Sanctuary include marine wildlife disturbance from construction and operation activities and seabed disturbances resulting from the location of seafloor subsea electrical transmission cables and turbine anchoring systems. Unlike some other less sensitive areas of the marine environment, the Cashes Ledge Area is uniquely vulnerable to such development. Additionally, as sea level rise threatens the integrity of the region’s coastal zone, new demand for offshore sand and gravel to fortify coastal areas is expected to increase,¹⁴⁰ presenting a potential threat to areas with significant sand resources and possibly including areas within the Cashes Ledge Area.

4. Management Consideration 4: “A national marine sanctuary would provide unique conservation and management value for this area or adjacent areas.”

To conserve biodiversity, an important aspect of marine protected areas is to achieve regional representation of native ecosystem types.¹⁴¹ Currently, existing management measures do not fully protect anywhere in the Gulf of Maine. A National Marine Sanctuary will provide unique conservation and management value for the Cashes Ledge Area’s diversity of biological and physical resources. Established by Congress in recognition of the importance of preserving and restoring the marine environment, the Sanctuary System is the only program with the expertise and explicitly authorized primary objective to protect marine resources.¹⁴²

The Proposed Sanctuary will amplify recognition of the Gulf of Maine as a place of national significance and shine a light on the central Gulf of Maine and the extraordinary Cashes Ledge

Area ecosystem. Such a designation will foster significant place-based partnerships and programs at the local, national, and international levels. The Proposed Sanctuary will support the development of Cashes Ledge Area dedicated science programs, facilitate the necessary financial investment from state, federal, and private funding, and build public and stakeholder awareness of and engagement in the Cashes Ledge Area. A multi-stakeholder Sanctuary Advisory Council will be established to advise on sanctuary management and public engagement and promote opportunities for community involvement. The Proposed Sanctuary will bring much needed resources to the conservation and management of the Cashes Ledge Area.

By attracting investment in research, public outreach, and education, the Proposed Sanctuary will strengthen existing conservation and management regimes. NMFS and the regional councils have taken steps towards rebuilding the health of the Cashes Ledge Area's marine resources (see Consideration 5). A Sanctuary designation will build on these efforts by providing a coordinated and comprehensive approach to the conservation and management of the special marine resources within the Cashes Ledge Area. For example, designating the region in and around Ammen Rock to serve as a fully protected area will facilitate the study of natural variability from local and regional ecological processes (e.g., predation, competition, climate change, storms) where direct effects of fishing will not mask, or add a degree of ambiguity, to the interpretation of results (see Consideration 1). Such scientific research will not only foster greater understanding and discovery of some of the most fragile Gulf of Maine habitats but enable sanctuary managers to make informed decisions that ensure the longevity of this unique Area.

5. Management Consideration 5: *“The existing regulatory and management authorities for the area could be supplemented or complemented to meet the conservation and management goals for the area.”*

The enhanced protections and conservation of the Cashes Ledge Area afforded by a National Marine Sanctuary designation will supplement and complement the existing regulatory and management authorities. The Cashes Ledge Area has long been recognized for its ecological and scientific value, but existing management measures do not currently provide the comprehensive and permanent protection necessary to safeguard this cultural and natural resource. A sanctuary designation including a fully protected area will complement existing authorities for fisheries management, offshore energy development and deep-sea cables in support of broader conservation and effective management of the Cashes Ledge Area. Such a comprehensive management scheme will enable the prioritization of management actions that ensure long-term resilience, reduce climate vulnerability, and sustain the Cashes Ledge Area's outstanding biodiversity and most fragile habitats. Thus, a Sanctuary designation will ensure the long-term protection of the most vulnerable resources in the Cashes Ledge Area while also promoting economic opportunity through well-managed, multi-use areas.

Fisheries & Species Management: Based on the process outlined under Section 304 of the National Marine Sanctuaries Act (NMSA), we propose that, following initiation of scoping for proposed designation, NOAA approach the New England Fishery Management Council (NEFMC) to draft fishing regulations for the Proposed Sanctuary (including the fully protected area) consistent with the sanctuary's goals and objectives.¹⁴³ In doing so the regional fishery management council should consult with Tribal Nations and Indigenous communities and their natural resources or fisheries departments and other interested parties.

NMFS has jurisdiction over the fishery resources and fishing activities in the Cashes Ledge Area under the MSA. Various federal and interstate Fishery Management Plans in place for the fishery resources in the area have been developed by the NEFMC, the Mid-Atlantic Fishery Management Council (MAFMC), and the Commission, and NMFS (pelagic and shark species), depending upon the species. In addition to fisheries, NMFS and the U.S. Fish & Wildlife Service (USFWS) manage the marine mammal, seabird, and sea turtle species found in the area under the Endangered Species Act, the Marine Mammal Protection Act, and other applicable laws.

The proposed management protection scheme can be put in place with minimal disruption to the commercial fishing industry, because much of the Proposed Sanctuary overlaps with the existing Cashes Ledge Groundfish Closure and Habitat Management Areas, which

has been closed to fishing with bottom-tending gear for more than 25 years. Currently, the NEFMC, in conjunction with NMFS, manages habitat protections in the region through the designation of essential fish habitat.¹⁴⁴ The numerous species that occur in the Proposed Sanctuary are managed under Fishery Management Plans developed by the regional fishery management councils, the Commission, or NMFS. The NEFMC has used spatial closures in the Cashes Ledge Area as far back as the late 1990s to address fishing mortality and to provide protection for juvenile groundfish, spawning fish and essential fish habitat. First, in 1998, a small one-month groundfish closure was implemented on the eastern portion of Cashes Ledge to reduce fishing pressure on Gulf of Maine cod. In 1999, the closure was extended to four months and the boundaries were reconfigured to the current boundaries of the “Cashes Ledge Groundfish Closure Area” (see Figure 12). Since 2002, in response to persistent overfishing, commercial groundfish fishing has been prohibited year-round in the Cashes Ledge Groundfish Closure Area. In 2004, Cashes Ledge was further protected when year-round habitat closures were implemented.¹⁴⁵ These measures were preserved in the 2018 Omnibus Essential Fish Habitat Amendment 2 (OHA2), though the boundaries of the Cashes Ledge Habitat Management Area (HMA) were slightly altered, reducing the size of the Cashes Ledge HMA closed area (see Figure 12).¹⁴⁶ OHA2 also implemented new year-round HMAs on Fippennies Ledge and

Figure 12: Sanctuary (black) and fully protected area (blue) along with existing management areas, including the Cashes Ledge Groundfish Closure Area (brown), Ammen Rock HMA (magenta), Cashes Ledge HMA (red), Fippennies Ledge HMA (yellow), the final Gulf of Maine Wind Energy Area (beige shaded region), and the five nearest proposed sale notice lease areas (colored shaded regions).

Ammen Rock (see Figure 12). The Fippennies Ledge HMA is closed to all mobile bottom-tending gears (same as the Cashes Ledge HMA) and the Ammen Rock HMA is closed to all gears except lobster traps. The various management measures put in place by the NEFMC and NMFS, though limited in scope and not permanent, nonetheless contributed to the overall health of the Cashes Ledge Area and demonstrate a recognition by the NEFMC of the value of the Cashes Ledge Area. These spatial closures provide the initial foundation for coordinated conservation and management of the exceptional resources found at the Cashes Ledge Area.

Designating the Cashes Ledge Area as a sanctuary will supplement these fisheries-based management measures, providing long-term protection of the most vulnerable resources in the Area by prohibiting all extractive and otherwise damaging activities in the fully protected area, and enhancing management in the remainder of the Proposed Sanctuary. The collaboration and partnership between ONMS, the regional management councils, and respective Tribal Nations and Indigenous communities' natural resources or fisheries departments will inform management actions necessary for resources under the councils' purview while advancing the conservation objectives of the sanctuary program and the Proposed Sanctuary.

Offshore Energy: BOEM oversees offshore oil and gas development in federal waters, as well as offshore wind development. There are currently no oil and gas leases within the Atlantic Outer Continental Shelf (OCS) in or around the Cashes Ledge Area.¹⁴⁷ However, exploration for oil and gas extraction has taken place offshore of New England in the past.¹⁴⁸ Oil and gas development within the Proposed Sanctuary will be prohibited, ensuring the long-term protection of the Cashes Ledge Area.¹⁴⁹

Offshore wind development planning is currently underway in the Gulf of Maine. In August 2022, BOEM issued a request for interest to gauge commercial interest in obtaining wind energy leases within the Gulf of Maine.¹⁵⁰ On March 15, 2024, BOEM designated a final Wind Energy Area in the Gulf of Maine and on May 1, 2024, BOEM issued a Proposed Lease Sale Notice¹⁵¹ identifying eight potential lease areas.¹⁵² The Final Wind Energy Area in the Gulf of Maine currently excludes the current Cashes Ledge Groundfish Closure and nearly all of the Proposed Sanctuary (see Figure 12).¹⁵³ Additionally, the eight areas in the proposed lease sale notice are outside of the Proposed Sanctuary's boundaries. Offshore wind energy development will be prohibited in the Proposed Sanctuary, with the exception of transmission cables outside of the fully protected area which will be regulated by NOAA (see paragraph below). Transmission cables in the fully protected area will be prohibited.

Deep Sea Cables: At least six entities have some authority over cable-laying in the ocean, critical for global communications and energy transmission. NOAA is authorized under the NMSA,¹⁵⁴ to regulate whether and how proposed submarine cables are installed in national marine sanctuaries to protect important marine resources. Currently, there are no known subsea cables, or plans for future cables in the Proposed Sanctuary. Subsea cable exploration and development will be prohibited in the fully protected area where all extractive and otherwise damaging activities are incompatible. However, it is crucial to conduct any future cable-laying within the rest of the Proposed Sanctuary with an eye toward preservation of the special habitats and marine life within the Proposed Sanctuary, and outside of the fully protected area.

6. Management Consideration 6: *“There are commitments or possible commitments for partnership opportunities such as cost sharing, office space, exhibit space, vessel time, or other collaborations to aid conservation or management programs for the area.”*

There are many opportunities for collaborations and partnerships to support a vibrant and thriving Cashes Ledge National Marine Sanctuary. There is broad, stakeholder support for the permanent protection of the Cashes Ledge Area. Additionally, this Area’s ability to capture public attention and harness opportunities for partnerships across ocean education and awareness is demonstrated through a series of past exhibits that have been displayed throughout the region (see Consideration 2). Further, as an area of immense scientific interest, decades of scientific research and data collection have already taken place and are ongoing (see Consideration 1), and past research expeditions launched (see Consideration 2) illustrate robust future partnership opportunities.

For example, the Seacoast Science Center is home to an existing, dedicated Cashes Ledge installation that has and will continue to serve to further the public’s engagement by highlighting this unique ocean wonder for its 100,000 visitors and program participants who come to its seaside location at the shore of the Gulf of Maine in Odiorne Point State Park in Rye, NH. Additionally, the New England region is already home to the Stellwagen Bank National Marine Sanctuary, whose dedicated staff and existing resources could offer unique education and research collaborations and partnership opportunities for the Proposed Sanctuary.

Nominators further intend to explore opportunities to partner with regional Tribal Nations and Indigenous communities, dependent on their community interest, to honor cultural connections to the Gulf of Maine and the Cashes Ledge Area.

7. Management Consideration 7: *“There is community-based support for the nomination expressed by a broad range of interests, such as: individuals or locally-based groups (e.g., friends of group, chamber of commerce); local, tribal, state, or national elected officials; or topic-based stakeholder groups, at the local, regional or national level (e.g., a local chapter of an environmental organization, a regionally-based fishing group, a national-level recreation or tourism organization, academia or science-based group, or an industry association).”*

There is broad community-based support for protecting the Cashes Ledge Area in the Gulf of Maine, including a diverse coalition of supporters. Letters of support from this community are enclosed (see appendix) and include from the Houlton Band of Maliseet Indians, regional and national conservation and environmental organizations, youth serving organizations, faith-based organizations, scientists, education organizations and arts programs, recreational businesses, birding, diving, and outing clubs, as well as individual New Englanders.

Further, we propose a pre-designation Sanctuary Advisory Council comprised of a diverse group of community stakeholders be formed to facilitate stakeholder participation through the designation process and to serve as a liaison between NOAA and the community.

Scientists' Declaration of Support for the Protection of the Cashes Ledge Area

In the heart of the Gulf of Maine, approximately 90 miles off the New England coast, lies one of the most unique, diverse, dynamic and ecologically productive systems in the region's marine waters. The undersea ridge comprising Cashes Ledge, Parker Ridge, and Sigsbee Ridge and flanked by the deeper reaches of Cashes and Ammen Basins, together constituting the "Cashes Ledge Area" (Figure 1), encompass a wide range of inter-connected habitats and altogether a rich and remarkable biodiversity. Atop and along the flanks of its highest peak, on Ammen Rock, lies the deepest, densest kelp forest on the eastern seaboard and the jewel in the crown of the Cashes Ledge Area.

For several decades the Cashes Ledge Area has served as an important research site for numerous marine scientists who study ocean wildlife, fisheries sustainability, oceanography, and climate change. Research of the Cashes Ledge Area by scientists and academic institutions has already added substantially to our common understanding of New England's marine ecosystems, particularly within the Gulf of Maine. This offshore haven for ocean wildlife and laboratory of marine ecology provides an opportunity for decades of continued study of ecosystem functioning and biodiversity in a rare environment that is isolated from the polluted waters of coastal habitats and less impacted by commercial fishing.

Measured by any scale, the Cashes Ledge Area warrants protection to ensure that its intricately connected habitats and unique ecosystem can continue to serve as a reserve of ocean biodiversity, productivity and an offshore ocean laboratory for scientific research. With the Gulf of Maine warming faster than 97% of the world's oceans, the largely intact habitats and communities of the Cashes Ledge Area also constitutes a key opportunity for climate change research and stewardship.

For these reasons, we support the nomination of the Cashes Ledge Area as a National Marine Sanctuary and urge the acceptance of this nomination to the Sanctuary Inventory and the initiation of the public process for its designation. As part of the nomination, we also support the establishment of a fully protected sub-area within the Sanctuary and encompassing the Ammen Rock kelp forest and adjacent inter-connected habitats (Figure 1). In addition to conserving biodiversity and engendering ecosystem resilience to climate change, protecting this sub-area from fishing and other extractive and destructive activities would provide scientists a crucial natural laboratory to study the impacts of ocean warming and acidification without the confounding influences of additional human impacts.

Unique Ocean Habitat

The foundation of the Cashes Ledge Area is a sharply rising granitic ridge with widely spaced pinnacles and knolls that runs generally parallel to the coast and extends approximately 32 miles from the southeastern extent of Parker Ridge, through Cashes Ledge itself, to the northeastern tip of Sigsbee Ridge (Figure 1). [1, 2] Flanking this underwater mountain range are the deeper reaches of Cashes Basin to the west and Ammen Basin to the east, reaching maximum depths of approximately 725 ft. Ammen Rock, the highest peak within Cashes Ledge, rises steeply from the ocean floor at 460 feet to within 30 feet of the ocean's surface. The offshore location and steepness of the site create a unique environment where strong currents mix deep cold and shallow warmer water that contacts the rocky bottom within the photic zone. The result is a highly productive location for prey organisms like algae and plankton and a habitat dominated by predatory fish such as cod, pollock, cusk and wolffish. [3, 4, 5, 1, 2, 6, 7]

The area is typified by diverse terrain and substrates, ranging from banks, rocky peaks, and channels to a complex substrate of mud, gravel, sand, and bedrock; in a relatively small area it thus contains all of the bottom types typical of the offshore Gulf of Maine. [8] It supports vibrant bottom dwelling communities of bright orange, red and yellow sponges, sub-arctic species of sea stars, brittle and feather stars, sea squirts, sea pens, sea anemones, worms, northern shrimp, horse mussels and myriad encrusting

bryozoans. Among its defining features is one of the largest and deepest kelp forests in the Gulf of Maine, located on the uppermost reaches of Ammen Rock. [9, 2]

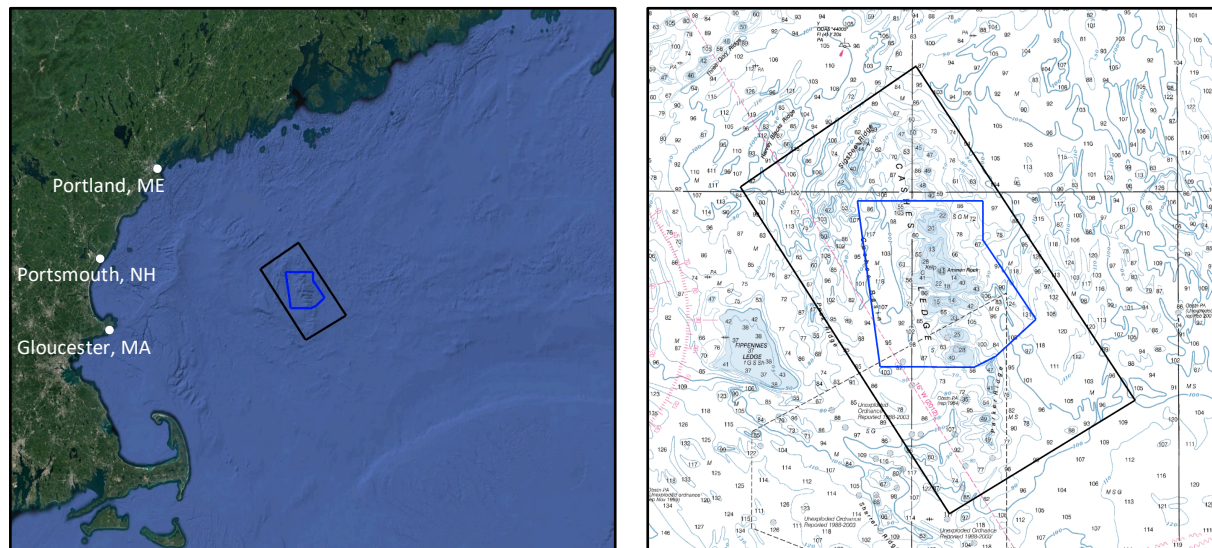

Figure 1. Cashes Ledge Area location within the central Gulf of Maine (left) and bathymetry (right; fathoms), showing the proposed National Marine Sanctuary (black) including a fully protected sub-area (blue).

Figure 2. Three-dimensional rendering of the Cashes Ledge Area. Gulf of Maine Research Institute. "Cashes Ledge." Undersea Landscapes | Maps of Cashes Ledge. Map is a 50x vertical exaggeration.

The value of the Cashes Ledge Area habitat has been recognized by the regional federal fishery management authority, the New England Fishery Management Council (NEFMC), which has designated a large portion of the area as Essential Fish Habitat for species such as Atlantic cod, haddock, pollock, monkfish, American plaice, white hake, witch flounder, and halibut. For example, the rocky cobble and gravel substrates of the Cashes Ledge Area are critical for juvenile Atlantic cod, its sandy and algal dominated areas serve as habitat for all life stages of pollock and cunner, and its deep muddy areas are essential habitat for white hake. Several of these species are depleted stocks subject to overfishing,

overfished, or both. For instance, the Gulf of Maine haddock stock is subject to overfishing, while Gulf of Maine Atlantic cod is both subject to overfishing and classified as overfished.

Ecological Importance and Characteristics

The Cashes Ledge Area's "mountain range" rises steeply from the deep adjacent sedimentary basins with many peaks lining this extensive ridge (Figure 2). Ammen Rock, located roughly in the center of the ridge is of particular prominence and provides a diverse habitat that has proven ideal for studying the structure of benthic communities along its 30-300 ft depth gradient. Ammen Rock is a dome-shaped steeply sloping granite outcrop, covered with tall laminarian kelp that rises to within 30 ft of the ocean surface. The kelp forms a canopy, providing a structurally complex habitat occupied by many species. The sloping bedrock shelf extends to depths of approximately 220 ft, before continuing gradually deeper. [2] Beyond 220 ft the bottom is a talus slope of cobble and large boulder outcroppings interspersed with patches of sand and gravel. A sand and gravel plain extends deeper than 250 ft to the base of the ridge, beyond which are the fine sand and silt sediments of the deep basins. [2] This diverse mixture of complex habitat types within a relatively small area and across a wide depth range helps to make the Cashes Ledge Area such a productive ecosystem sustaining a diverse mix of species. Within a given habitat type, it is well known that more spatially complex habitats support higher levels of diversity than simple ones. Ecological research indicates that habitat diversity also increases species diversity and is important for ecosystem functioning. [10, 11] In this sense the wide range of habitat diversity found from the peaks to the muddy deeps of the Cashes Ledge Area is a valuable ecological and research asset.

Oceanography

Another substantial factor in the health of the Cashes Ledge Area ecosystem is the confluence of currents along the ridge. These currents, heavily influenced by Gulf of Maine oceanographic gyres, provide a constant supply of cold, nutrient-laden waters. [12, 13] Waters circulate around the ridge in a pattern brought on by the ebb and flow of the tides. Another stunning oceanographic phenomenon known as internal waves, generated by the steep topography and stratified water column around Ammen Rock, bring even more of the plankton-rich waters down into this highly dynamic area. [14, 1, 15] The force of these internal waves pushes the warm water from the upper levels of the water column against the peaks and slopes of the ledge, driving it down to mix with the colder depths, delivering a rich supply of plankton to the bottom. [13, 1] The warm water then rises back to the upper photic zone where it is again pushed along Cashes Ledge forcing it downward again. This process repeats itself again and again during the late spring to fall with the movement of the internal waves producing drastic fluctuations in water temperature and plankton supply to the sea floor around Cashes Ledge that result in temperature changes of as much as 9 degrees centigrade and approximately 2-3 fold increases in phytoplankton on the bottom (100 ft depth) each time an internal wave passes through. [1]

The effect of this repetitive cycle is regular circulation of nutrient rich waters within the water column and on the bottom in this area creating an area of high productivity and energy, with a plentiful food supply and high growth rates among its resident bottom dwelling species of sponges, sea anemones, mussels and bryozoans. [7, 14, 15, 16] Another factor promoting high growth rates of benthic invertebrates at the shallow peaks of Cashes Ledge is enhanced water flow as currents speed up more than three times between 225 and 100 ft depths as the currents impinge on the topographic "ramp" that Cashes Ledge resembles (Figure 2). [17, 18] As increased water flow has been shown to increase the species richness of benthic invertebrates [19], high flow over the peaks of Cashes Ledge likely contributes to its high benthic diversity. Taken together, the characteristics of the marine communities situated atop the

long ridges of the Cashes Ledge Area reflect an incredible dynamism within this offshore ecosystem, characterized by high productivity, high growth rates of benthic invertebrates and high predation by demersal fish. [6, 20, 15, 21]

Species Diversity

The hard, rocky substrate on Ammen Rock and other pinnacles across the area are home to a variety of benthic flora and fauna that form diverse communities that vary by depth along the slopes of the pinnacles, establishing identifiable shallow, intermediate, and deep water zones. [9, 2] Although most of these species can also be found in deep rocky habitats along the New England and southern Nova Scotia coast, the unique topographic and geographic setting and enhanced productivity of Cashes Ledge has produced communities with uniquely different relative abundances and depth limits than in those coastal habitats. [9, 4, 2] In terms of the benthic invertebrate communities, the species richness at the northern edge of Cashes Ledge is higher than at any rock wall site at comparable depths in the Gulf of Maine. [4] Several undescribed species of poeciloscerid sponges occur at Cashes Ledge including one extremely rare species of blue sponge that has only been seen in rock wall communities at Cashes Ledge. [22]

In the shallow zone of Ammen Rock, which extends from the top of each pinnacle down to a depth of approximately 130 ft, exists the densest and deepest kelp forest on the eastern seaboard. [9, 2] The portion of the zone nearest to the surface is dominated by Laminarian kelp up to 20 ft tall. At 100 ft depth shotgun kelp (*Agarum clathratum*) becomes more

Figure 5. High diversity invertebrate community at Ammen Rock containing large sea anemones (*Urticina*), encrusting bryozoans (*Parasmittina*) and orange sponge (*Hymedesmia*) and many others. (J. Witman)

Figure 3. Assemblage of three species of sea stars, massive and encrusting sponges and sea anemones at Ammen Rock Pinnacle (J. Witman)

Figure 4. Vase sponge (*Phakelia*) with brittle stars (*Ophiopholis*) on Cashes Ledge (J. Witman).

dominant. In this zone, high levels of water flow and low sedimentation leads to rapid species turnover. Kelp dominated patches at the tops of the ridges are often intermixed with large aggregations of sea anemones (*Metridium senile*), with their light colored tentacle crowns swaying back and forth in the currents. [9, 22, 2] Encrusting and mobile invertebrates proliferate in part due to the abundance of kelp. [9, 2] An intermediate zone characterized by abundant suspension feeding invertebrates begins below the kelp dominated zone and continues to approximately 200 – 230 ft where the continuous rock slope ends. Large *Urticina* sea anemones, a particularly vulnerable species, and orange sea stars (*Hippasteria phrygiana*) are common predators in this range. Other prevalent invertebrates include brachiopods, small crinoids

and ascidians. Soccer ball sized yellow mounding sponges (*Mycale lingua*) dot the sea scape on these deep rocky slopes. [22, 2] As the continuous rock tapers into gravel and a muddy bottom from 230 - 250ft, the slope begins to level off and the soft bottom benthic community contains numerous tube worms (*Myxicola infundibulum*), mud anemones (*Cerianthus borealis*), and northern shrimp (*Pandalus borealis*). [9, 2] Much of the habitat structure in these deep soft substrate communities is biogenic, consisting of burrows, pits and delicate thickets of projecting tubes of mud anemones. [2]

Figure 6. Red cod and cunner in a kelp forest (Brian Skerry).

The rich and unique array of kelp and invertebrate species and diverse habitat types also helps to support and provide shelter for a productive population of finfish predators such as cod, haddock, hake and plaice in the Cashes Ledge Area. For example, though older cod are generally found in deeper water, cod up to three feet long have been found within the relatively shallow kelp forest at Ammen Rock. [20, 23] Up to five foot long “whale cod” have also been observed on the northern edge of Cashes Ledge. [21] Cashes Ledge also hosts a resident form of “red cod”—an effect likely due to some combination of diet, environmental conditions, and possibly genetics [24] — that is primarily associated with the kelp forest. [25] Juvenile cod are also most abundant in the kelp forest [26], which likely provides an important refuge from predators. [27]

Also found in relative abundance in this area are other large predatory finfish such as white hake and pollock. [23] Many other groundfish, though less abundant, are commonly present in the Cashes Ledge Area, including wolffish, monkfish, haddock, redfish, silver hake, American plaice, and halibut. [23] Blue sharks are commonly seen plying the waters around Cashes Ledge in the warmer months, sometimes feeding on seabirds at the surface. Atlantic bluefin tuna can also be found pursuing herring and using the ledges and slope of Cashes Ledge to entrap large schools of these pelagic fish. [21]

Average fish biomass on Ammen Rock has been shown to be 305 times greater than in coastal kelp communities at the same depth and to have a numerical density more than twice the average in temperate western North Atlantic waters. [27] Comparisons to similar locations in coastal Maine where populations of commercial groundfish species are generally depleted have suggested that the high abundance of large fish such as cod, pollock and wolffish at Cashes Ledge leads to an ecosystem where their predation still plays a dominant role. [20] For example, kelp forests in many regions, including the coastal Gulf of Maine, have suffered from enhanced grazing by surging sea urchin populations released from predation due to the depletion of the commercial fish species that naturally regulate their populations. At Cashes Ledge, healthier populations of predatory fish, including Atlantic cod and Atlantic wolffish, may maintain natural food web interactions that regulate sea urchin populations, allowing the kelp to thrive. [28]

Analysis of sightings data also shows a high species richness and abundance of whales and dolphins in the Cashes Ledge Area, particularly over Cashes Ledge itself and in the area over Cashes Basin just to the west. [29] Cashes Ledge, with its abundant plankton, is an important feeding stop for humpback whales during their seasonal migration in the spring and early summer. The critically endangered North Atlantic right whale is also often observed in the area. Minke whales are frequently spotted at Cashes Ledge in the summer, often diving in the internal wave slicks, presumably to feed.

Vulnerable Species and Communities

A number of the invertebrate species found on Cashes Ledge are particularly vulnerable to human disturbance. Research and modeling indicate that Cashes Ledge invertebrate communities at 30 m depth

normally experience a low rate of disturbance. [30, 31] However, simulations of resilience indicate that it would take from 7 – 268 years for a given species to recover from disturbance, with the rarer species taking more time. The large solitary sea anemone, *Urticina crassicornis*, is especially vulnerable as the model predicted 268 years for it to return to the community if removed by fishing gear or other impacts.

Large, yet sensitive, horse mussel beds that serve as foundation species are especially common at Ammen Rock. By providing a habitat and a refuge from predation for other species of invertebrates these beds serve as mini-biodiversity hotspots on the bottom. [32] Due to their diversity enhancing function, horse mussel beds are protected habitats in the Irish Sea and other northern regions. These beneficial horse mussels are susceptible to human impacts such as bottom-trawling fishing gear, lobster pots, gillnets and even the effects of fishing hooks and lines. Once damaged or displaced, horse mussel beds will be slow to regenerate on Cashes Ledge, as these beds seldom form in subtidal areas from horse mussel larvae relocated from other areas. Brachiopods, an ancient lineage of invertebrates, are another species found on the deeper walls of Cashes Ledge that are vulnerable as a result of their difficulty recruiting replacement larvae. [21]

The kelp that has come to be the identifying characteristic of the Cashes Ledge Area is itself quite susceptible to human-induced harm. Although Atlantic kelp is known to re-grow within one to two years of removal, it would take many years for the tall kelp forests found on Cashes Ledge pinnacles to return to their current stature if stripped clear by mobile fishing gear or significantly shredded by repeated impact from lines, hooks, traps or other human influences. The diverse ecosystem that depends upon these kelp forests could be completely altered, if not eliminated, during the period of re-growth. For this reason, it is crucial that this key habitat be permanently protected.

Unique Kelp Forests

The kelp forests on Ammen Rock and the deep pinnacles on Cashes Ledge stand out as one of the most unique ecological structures in the Gulf of Maine. Average biomass of sugar kelp (*Saccharina latissima*) at Ammen Rock has been recorded to be up to 3 orders of magnitude greater and density up to 162 times higher compared to coastal sites at similar depth; these are the greatest levels of biomass and density reported for this species in the western North Atlantic. [27] Kelp ecosystems are one of the most productive in the world, and the kelp forests of Cashes Ledge are no exception, providing a very important habitat for a diverse array of organisms, including fish, mollusks, and other seaweeds. [33, 34, 35] These kelp beds also likely serve as nursery grounds for large predatory fish, such as cod and pollock. [20, 9, 6]

Figure 7. *Saccharina latissima* kelp (Brian Skerry).

The ecological role of the kelp is even broader than the dense forests that they create in this Cashes Ledge ecosystem. The substantial kelp forests of Cashes Ledge likely provide a stream of nutrients and energy to the waters all around the mountainous ledge, as the kelp serves as a food source for organisms inhabiting the deeper waters surrounding the ridge and benthic organisms at the base of the ridge. Detritus from the kelp, kelp particles that have eroded and broken free over time, slowly drift down from the upper water column and serve to feed the organisms in the waters below. [36] This important ecological role of kelp has been well studied in the Pacific Northwest [37] and with the same species of kelp off Nova Scotia that occur on Cashes Ledge, where a direct link has been found between the density of the kelp bed and the extent of detritus production. [36] Burial of kelp detritus in continental shelf slopes and the deep ocean has also been identified elsewhere as a mechanism for carbon sequestration [38], and the role of the Cashes Ledge kelp in the local carbon cycle and the possibility of kelp detritus ultimately being buried in the sediments of the deep adjacent basins are important research questions that remain to be investigated.

Climate Change

The importance of climate change impacts on the Gulf of Maine cannot be overstated. The past five years (2019-2023) have been among the warmest on record [39], and waters are currently warming faster than 97 percent of the global ocean. [40] A wide variety of impacts on benthic and pelagic organisms are being observed throughout the region. The impacts of warming are particularly acute for species such as kelp and Atlantic cod for which the Gulf of Maine is near the southernmost extent of the species' North Atlantic range. [41, 42] As these trends continue, the scientific value and importance of protecting a portion of the Cashes Ledge Area as a living laboratory and oceanographic research platform only increase. The baseline of information on the abundance and diversity of organisms and temperature along a wide range of depths makes the Cashes Ledge ecosystem a particularly good area to test the hypothesis that Gulf of Maine marine life may be able to survive the exceptionally rapid warming of shallow waters by moving to deeper cooler waters, achieving a refuge at depth. [43]

On Ammen Rock, declines in sugar kelp abundance between initial surveys in the 1980s and surveys in 2015 were attributed to the rapid warming of the Gulf of Maine system, and the 2012 heat wave in particular, in combination with the spread of an invasive species of white bryozoan (*Membranipora membranacea*) encrusting the kelp blades. [27] Analyses from a 2023 scientific cruise to the Cashes Ledge Area are underway and preliminarily suggest that while overall kelp abundance remains high, the proportion of sugar kelp relative to horsetail kelp (*Laminaria digitata*) has continued to decline and that the percent coverage of the invasive red alga *Dasysiphonia japonica* has increased substantially. [44] Protecting these most pristine yet still vulnerable kelp forests of the Gulf of Maine will maximize their resilience in the face of continued warming. [45]

Fisheries and Existing Habitat Protections

Among the most significant of the risks to the Cashes Ledge Area's ecosystem is the damage posed by commercial fishing. Cashes Ledge was first described as fishing grounds in the 1800s, though fishermen generally avoided the area because the underwater topography made anchoring and fishing difficult. [46] By the 1920s, cod, haddock, and other species were being commercially harvested on Cashes Ledge. However, it was not until the late 20th century, with the advent of new technologies such as bottom-fishing gear equipped with "rock-hoppers," capable of trawling a rocky seafloor, that commercial fishing became common in the Cashes Ledge Area.

In response to declines in groundfish populations, starting in the late 1990s the NEFMC has used spatial closures in the Cashes Ledge Area as a tool to address fishing mortality and to protect essential fish habitat. Since 2002, all gear capable of catching groundfish has been prohibited year-round in the Cashes Ledge Groundfish Closure Area, a large region encompassing Cashes Ledge, Fippennies Ledge, and the areas between them. At present, this area is identified as a mortality closure linked to the status of Gulf of Maine groundfish. Within this mortality closure are also Habitat Management Areas (HMAs) limiting the fishing gear types that can be used in designated Essential Fish Habitat. The use of all bottom-tending mobile fishing gear is prohibited in the Cashes Ledge Habitat Management Area, which encompasses a portion of Cashes Ledge largely limited to its rocky ridgeline. The much smaller Ammen Rock HMA encompassing the majority of the kelp forests is closed to all gear except lobster traps. Recent studies indicate these closures are having positive impacts on managed species. Analyses of cod caught inside relative to outside the Cashes Ledge Groundfish Closure Area, for instance, have shown greater length and age inside the closed area; greater gut fullness and differences in stable isotopic signatures also indicate greater availability of prey resources and a broader range of prey types. [47]

While these commercial fishing closures demonstrate a recognition by the NEFMC of the value of the Cashes Ledge Area and have effectively prohibited the most invasive and destructive forms of fishing using various styles of bottom trawl, they are inadequate in scope and not permanent. The closures are

fisheries management tools focused on achieving optimum yield from managed species in the area and are not designed or intended to serve as a mechanism for protecting marine biodiversity. Outside of the Ammen Rock HMA, a number of other commercial fishing gears are still permitted in the Cashes Ledge Area, including mid-water trawls, purse seines, lobster pots, rakes, cast nets, tongs, weirs, dip nets, stop nets, pound nets, pelagic hook and line, pelagic longlines, single pelagic gillnets, and shrimp trawls, as well as recreational fishing. These existing management measures are furthermore subject to change and can be modified or removed through fishery management actions. Equally importantly, while the current closures do provide protection against some fishing impacts, those protections fail to address other potential impacts associated with energy development, ocean dumping and numerous other ocean uses. Consequently, the cumulative extent of the conservation measures provided by this suite of fishing regulations is simply insufficient to provide the Cashes Ledge Area with the level and permanency of protection that it warrants and needs.

Need and Benefits of Permanent Habitat Protection

For decades, the best marine science has demonstrated the critical importance of establishing permanently protected areas in our oceans as a means to maintain their long-term health, resilience and biological diversity. [48, 49] The impacts of climate change on our ocean, as well as the ongoing global biodiversity crisis, create an urgent need to build such resilience into the region's ocean ecosystem and to help ensure its adaptability to the challenges it faces. A growing movement of scientists, policy makers, conservation organizations, and others around the world have called for the protection by 2030 of at least 30 percent of the world's land and oceans for the benefit of people, biodiversity, and climate resilience [50], an effort enshrined in the US in the Biden Administration's America the Beautiful Initiative.

Marine protected areas are a key tool for achieving the 30x30 and America the Beautiful goals, playing a central role in maintaining healthy and vital oceans. Protected areas conserve living resources and habitat, maintaining biodiversity. Ecosystems with high abundances and diversity of species such as the largely intact Cashes Ledge Area also often have greater capacity to resist, recover from, and adapt to stressors associated with change, including warming and extreme events such as heatwaves and storms. At the species level, healthy and more abundant populations are generally more resilient to stress, while at the ecosystem level, healthier ecological communities are more likely to maintain natural ecosystem interactions and function; this latter effect might provide an "insurance policy" that ecosystem functioning will be maintained even if some species decline. [45, 51, 52]

The Cashes Ledge Area presents an important and unusual opportunity to permanently achieve such protection and associated ecological benefits. Given the existing fishery regulations already applicable to the Cashes Ledge Area, full and permanent protection of a sub-area of the region could be achieved with relatively minimal disruption to the commercial fishing industry, and these existing restrictions have helped to protect its sensitive environment for more than two decades. However, even if those restrictions are left in place, their scope and breadth are insufficient to ensure sustained protection against common threats to the healthy ecosystems of the Cashes Ledge Area and to allow its unique ocean floor habitat and kelp forests to be fully restored. Safeguarding the Cashes Ledge Area will ensure that this bountiful marine wonder and its many unique characteristics can be studied and admired by future generations.

For these reasons, we strongly support action to permanently protect the Cashes Ledge Area by designating it a National Marine Sanctuary. A Sanctuary designation would complement and extend existing measures in the region, providing more comprehensive and coordinated conservation and management of the exceptional resources found in the Cashes Ledge Area. It would celebrate the area's rich natural heritage and provide a refuge for its vibrant and vulnerable marine life, while also providing an exciting platform for research and education. As part of the designation, we support the creation of a fully protected sub-area within the Sanctuary, similar to fully protected portions of other Sanctuaries such as the Channel Islands National Marine Sanctuary. This area would be centered on the Ammen Rock kelp

forest but also encompass adjacent, connected habitats (Figure 1), in which all extractive and destructive activities would be prohibited, with the goals of conserving biodiversity and building climate resilience, while also facilitating research. Full protection of this sub-area would allow investigation of a multitude of important research questions in the absence of any additional human impacts, providing an unparalleled reference site for identifying and understanding the impacts of climate change in the Gulf of Maine.

Securing long-lasting protections for this important ocean wonder is vital in our rapidly changing ocean. We support this nomination and urge the addition of the Cashes Ledge Area to the Sanctuary Inventory and initiation of the public process for its designation as a National Marine Sanctuary.

Boston, MA

Dr. Richard T. Holmes, Ph.D.
Professor Emeritus of Biological Sciences
Dartmouth College
Hanover, NH

Dr. A. Randall Hughes, Ph.D.
Professor of Marine and Environmental Science
Northeastern University
Boston, MA

Dr. Malcolm L. Hunter, Jr, D.Phil.
Libra Professor of Conservation Biology
University of Maine
Orono, ME

Dr. Les Kaufman, Ph.D.
Professor
Boston University
Boston, MA

Dr. Scott D Kraus, Ph.D.
Emeritus Senior Scientist
New England Aquarium
Boston, MA

Dr. Marc Lapin, Ph.D.
Associate Laboratory Professor & Lands
Conservationist
Middlebury College
Middlebury, VT

Dr. Michael P. Lesser, Ph.D.
Research Professor, Emeritus
University of New Hampshire
Durham, NH

Dr. Joel Llopiz, Ph.D.
Associate Scientist with Tenure
Woods Hole Oceanographic Institution
Wood Hole, MA

Dr. Lucie Maranda, Ph.D.
Marine Research Scientist
University of Rhode Island
Kingston, RI

Dr. Catherine Matassa, Ph.D.
Assistant Professor of Marine Sciences
University of Connecticut
Storrs, CT

Dr. Kelton W McMahon, Ph.D.
Associate Professor
University of Rhode Island
Kingston, RI

Dr. Lauren Mullineaux, Ph.D.
Senior Scientist
Woods Hole Oceanographic Institution
Woods Hole, MA

Dr. James Palardy, Ph.D.
Director, Conservation Science
The Pew Charitable Trusts
Boston, MA

Dr. Mark R. Patterson, Ph.D.
Professor of Marine & Environmental Sciences
Northeastern University
Boston, MA

Dr. Chris Petersen, Ph.D.
Emily and Mitchell Rales Chair in Ecology
College of the Atlantic
Bar Harbor, ME

Dr. Jesús Gabriel Pineda, Ph.D.
Senior Scientist
Woods Hole Oceanographic Institution
Woods Hole, MA

Dr. Carlos Prada, Ph.D.
Associate Professor
University of Rhode Island
Kingston, RI

Dr. Jonathan B. Puritz, Ph.D.
Associate Professor
University of Rhode Island
Kingston, RI

Dr. Douglas B. Rasher, Ph.D.
Senior Scientist
Bigelow Laboratory for Ocean Sciences
East Boothbay, ME

Dr. Dov Sax, Ph.D.
Professor
Brown University
Providence, RI

Dr. Sandra E. Shumway, Ph.D., D.Sc.
Research Professor Emerita
University of Connecticut
Storrs, CT

Dr. Robert S. Steneck, Ph.D.
Professor
University of Maine
Orono, ME.

Dr. Simon R. Thorrold, Ph.D.
Senior Scientist
Woods Hole Oceanographic Institution
Woods Hole, MA

Prof. David W. Townsend, Ph.D.
Professor of Oceanography
University of Maine
Orono, ME

Dr. Geoffrey C. Trussell, Ph.D.
Doherty Professor and Chair
Northeastern University
Boston, MA

Dr. Les Watling, Ph.D.
Professor Emeritus
University of Maine
Orono, ME

Dr. W. Herbert Wilson, Jr., Ph.D.
David Arey Professor Emeritus of Biology
Colby College
Waterville, ME

Dr. Tundi Agardy, PhD
Director, Sound Seas
Washington, DC
Distinguished Visiting Fellow, Worcester
College, University of Oxford
Oxford, UK

Dr. Mike Allen, Ph.D.
Professor
University of Florida
Gainesville, FL

Dr. Andrew Altieri, Ph.D.
Assistant Professor
University of Florida
Gainesville, FL

Dr. Richard F. Ambrose, Ph.D.
Professor Emeritus
University of California, Los Angeles
Los Angeles, CA

Dr. Richard B. Aronson, Ph.D.
Professor and Head of Department
Department of Ocean Engineering and Marine
Sciences
Florida Institute of Technology
Melbourne, FL

Dr. Savanna Barry, Ph.D.
Regional Specialized Extension Agent
University of Florida
Gainesville, FL

Dr. Donald Behringer, Ph.D.
Professor
University of Florida
Gainesville, FL

Dr. Craig Benkman, Ph.D.
Professor Emeritus
University of Wyoming
Laramie, WY

Dr. Charles Birkeland, Ph.D.
Professor Emeritus
University of Hawaii at Manoa
Honolulu, HI

Dr. Carol Blanchette, Ph.D.
Research Biologist
University of California, Santa Barbara
Santa Barbara, CA

Dr. Barbara A. Block, Ph.D.
Professor
Stanford University
Pacific Grove, CA

Dr. Louis W Botsford, Ph.D.
Professor Emeritus
University of California, Davis
Davis, CA

Dr. Matthew Bracken, Ph.D.
Professor
University of California, Irvine
Irvine, CA

Dr. Richard Bradley, Ph.D.
Associate Professor Emeritus
Ohio State University
Columbus, OH

Dr. Sandra Brooke, Ph.D.
Full Research Faculty
Florida State University
Sopchoppy, FL

Dr. John Bruno, Ph.D.
Distinguished Professor
The University of North Carolina at Chapel Hill
Chapel Hill, NC

Dr. Ron Burton, Ph.D.
Distinguished Professor Emeritus
University of California
San Diego, CA

Dr. Jeb Byers, Ph.D.
Professor of Ecology
University of Georgia
Athens, GA

Dr. Paul Caiger Ph.D.
Senior Research Technician
University of Auckland
Auckland, New Zealand

Dr. Jenn Caselle, Ph.D.
Research Professor
University of California
Santa Barbara, CA

Dr. Joseph Cech, Ph.D.
Professor Emeritus
University of California
Davis, CA

Elizabeth Theresa Celia
Faculty Instructor of Biology and Marine
Biology
University of North Carolina Wilmington
Wilmington, NC

Dr. Kyle Cavanaugh, Ph.D.
Professor
University of California, Los Angeles
Los Angeles, CA

Dr. David Chagaris, Ph.D.
Associate Research Professor
University of Florida
Gainesville, FL

Dr. Grace Chiu, Ph.D.
Professor
Virginia Institute of Marine Science, William &
Mary
Gloucester Point, VA

Dr. John A. Cigliano, Ph.D.
Professor Emeritus
Cedar Crest College
Allentown, PA

Dr. Kathleen Cole, Ph.D.
Associate Professor
University of Hawaii at Manoa,
Honolulu HI

Stefan Cranston, MS
Researcher
University of Hawai'i at Manoa
Honolulu, HI

Dr. Paul Dayton, Ph.D.
Professor Emeritus
Scripps Institution of Oceanography
San Diego, CA

Dr. Edward E. DeMartini, Ph.D.
Adjunct Research Professor
University of Hawaii at Manoa
Honolulu, HI

Dr. Megan Dethier, Ph.D.
Director
Friday Harbor Labs
University of Washington
Friday Harbor, WA

Dr. Jenifer Dugan, Ph.D.
Research Biologist
University of California, Santa Barbara
Santa Barbara, CA

Dr. Ginny Eckert, Ph.D.
Professor and Director
Alaska Sea Grant, University of Alaska
Fairbanks
Fairbanks, AK

Dr. Peter J. Edmunds, Ph.D.
Professor
California State University Northridge
Los Angeles, CA

Elizabeth A. Elliott, M.S.
Research Specialist
University of North Carolina Wilmington
Wilmington, NC

Dr. Julie C. Ellis, Ph.D.
Co-Director, Wildlife Futures Program
University of Pennsylvania
Philadelphia, PA

Dr. Steve Emslie, Ph.D.
Professor
University of North Carolina Wilmington
Wilmington, NC

Daniela Escontrela Dieguez
Graduate Assistant
University of Hawaii at Manoa
Honolulu, HI

Dr. Thomas L. Fleischner, Ph.D.
Senior Advisor & Director Emeritus
Natural History Institute
Prescott, AZ

Dr. Nicole Fogarty, Ph.D.
Associate Professor
University of North Carolina Wilmington
Wilmington, NC

Dr. Steven Gaines, Ph.D.
Dean & Distinguished Professor
Bren School of Environmental Science &
Management
University of California, Santa Barbara
Santa Barbara, CA

Dr. Michelle Gaither, Ph.D.
Associate Professor
University of Central Florida
Orlando, FL

Dr. Brian Gaylord, Ph.D.
Professor of Evolution and Ecology
University of California
Davis, CA

Dr. Peter W Glynn, Ph.D.
Professor Emeritus
University of Miami
Miami, FL

Dr. Scott Goetz, Ph.D.
Regents Professor
Northern Arizona University
Flagstaff, AZ

Dr. Michael Graham, Ph.D.
Professor
Moss Landing Marine Laboratories
Moss Landing, CA

Dr. Judith Grassle Ph.D.
Professor Emerita
Rutgers University
New Brunswick, NY

Dr. Charles Greene, Ph.D.
Associate Director for Research and Strategic
Planning
Friday Harbor Labs
University of Washington
Friday Harbor, WA

Dr. Edwin Grosholz, Ph.D.
Distinguished Professor
University of California, Davis
Davis, CA

Dr. Gary D. Grossman, Ph.D.
Professor Emeritus
University of Georgia
Athens, GA

Dr. Charles B. Halpern, Ph.D.
Research Professor
University of Washington
Seattle, WA

Dr. Mark Hay, Ph.D.
Regents Professor and Teasley Chair of
Environmental Biology
Georgia Institute of Technology
Atlanta, GA

Dr. Kenneth Heck, Ph.D.
Emeritus Professor
Dauphin Island Sea Lab
Dauphin Island, AL

Dr. Marc J. S. Hensel, Ph.D.
Assistant Professor
University of Florida
Gainesville, FL

Dr. Michael Hickerson, Ph.D.
Professor
City College of New York
New York, NY

Dr. Mark Hixon, Ph.D.
Professor and Hsiao Endowed Chair of Marine
Biology
University of Hawaii
Honolulu, HI

Dr. Daniel Holstein, Ph.D.
Assistant Professor
Louisiana State University
Baton Rouge, LA

Mackenzie Jahnke
Graduate Student
University of Hawaii
Honolulu, HI

Dr. Ronald H. Karlson, Ph.D.
Professor Emeritus
University of Delaware
Newark, NJ

Dr. David Karowe, Ph.D.
Professor of Biological Sciences
Western Michigan University
Kalamazoo, MI

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

The 41 undersigned organizations write to express support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area.

Located 90 miles off New England's coast in the heart of the Gulf of Maine, Cashes Ledge is an extraordinary undersea mountain range home to myriad, and often vulnerable, marine species and habitats. As one of the most unique ecological structures in U.S. ocean waters, a sanctuary designation in this area would help conserve and protect the wildlife and habitats of the Cashes Ledge Area, provide unparalleled scientific research and education opportunities, and build climate resilience in a region that is among the fastest warming in the world's ocean.

The Proposed Sanctuary harbors a treasure trove of marine life living among the peaks and valleys of the Cashes Ledge, Parker Ridge, and Sigsbee Ridge formations, along with portions of the ecologically inter-connected, adjacent deep Cashes and Ammen basins, supporting a rich biodiversity of habitats and marine life. Cashes Ledge contains all of the bottom types typical of the offshore Gulf of Maine and atop its highest peak, on Ammen Rock, lies the deepest, densest cold-water kelp forest on the eastern seaboard. Cashes Ledge's diverse habitats, ranging from lush kelp to rocky outcroppings and deep muddy basins, provide refuge for a remarkable diversity of marine life, from the Atlantic wolffish and the rare blue sponge to the unusual red cod.

As the Gulf of Maine is overheating, with water temperatures rising faster than 97% of the global ocean, the Proposed Sanctuary's still largely intact and highly diverse benthic habitats constitute one of the most comprehensive opportunities for biodiversity and climate-stewardship in the Gulf of Maine. The Proposed Sanctuary will celebrate the region's rich natural heritage, create a refuge for vulnerable marine life as well as biodiversity generally, and provide opportunities for research and to enhance understanding of climate change impacts in the Gulf of Maine, as well as numerous education and collaboration opportunities for New Englanders to foster a connection to the Area.

We support the inclusion of a Fully Protected Area within the Proposed Sanctuary to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. This discrete area includes the Ammen Rock kelp forest and adjacent inter-connected habitats. Amidst a changing climate that is impacting the Gulf of Maine in ways we are only beginning to understand, the scientific value and ecological importance of fully protecting this Cashes Ledge sub-area as a biodiversity refuge and a living laboratory and oceanographic research platform is vital. From Cashes Ledge's lush

kelp to rocky outcroppings and deep muddy basins that provide an underwater oasis teeming with biodiverse marine life, securing long-lasting protections for this unique ocean wonder is vital in our rapidly changing marine environment and the multiple stakeholders reliant upon its health and function.

With deep appreciation for the robust, multi-step, public engagement process for considering protection of this place, we support the Cashes Ledge National Marine Sanctuary nomination and urge the Office of National Marine Sanctuaries to add it to the Sanctuary Inventory List and initiate the process for its designation.

Sincerely,

Azul

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor:

We, the undersigned 32 New England-based organizations and businesses write in support of the nomination of the Proposed Cashes Ledge National Marine Sanctuary.

Our region's iconic natural heritage reaches from the granitic slopes of the White Mountain National Forest to the brackish waters of Narragansett Bay estuary to New England's iconic 7,000-mile coastline. There off our shores lies a sea within a sea, the Gulf of Maine, which extends from Cape Cod all the way up to the Bay of Fundy and Nova Scotia and runs along the coasts of Maine, New Hampshire, and Massachusetts. Its waters provide a home to more than 3,000 species of wildlife and serve as the hub of New England's coastal economy. At its heart, and approximately 90 miles off New England's coast, lies Cashes Ledge—an extraordinary underwater mountain range and one of the most unique ecological structures in U.S. ocean waters. Sanctuary status for the Cashes Ledge Area would celebrate the rich, interconnected Gulf of Maine ecosystem and ensure its exceptional natural heritage is permanently protected for future generations of New Englanders.

The "Cashes Ledge Area" harbors a treasure trove of marine life among the peaks and valleys of its ridges and basins. On its highest peak, Ammen Rock, lies the deepest, densest cold-water kelp forest on the eastern seaboard. Cashes Ledge's diverse habitats, ranging from lush kelp to rocky outcroppings and deep muddy basins, provide refuge for a remarkable diversity of marine life, from the Atlantic wolffish and the rare blue sponge to the unusual red cod. Securing long-lasting protections for this unique ocean wonder is vital to the health of our ocean and the communities that rely upon it.

As the Gulf of Maine's waters warm faster than 97% of the world's ocean, a Cashes Ledge Sanctuary presents an outstanding opportunity for biodiversity and climate stewardship for the region. New Englanders are increasingly concerned about climate change impacts. Therefore, we support the establishment of the Proposed Sanctuary's fully protected sub-area, encompassing

the kelp forest and adjacent, interconnected habitats, to act as a biodiversity and climate refuge and serve as a living laboratory for scientists to better understand the climate impacts of our region.

We support the Cashes Ledge National Marine Sanctuary nomination and urge the Office of National Marine Sanctuaries to add it to the Sanctuary Inventory and initiate the process for its designation.

July 19, 2024

Dear Director Armor, NOAA's Office of National Marine Sanctuaries,

As young people who are dedicated to promoting the health and well-being of ecosystems in New England, the 17 youth-led and youth serving organizations and the 86 young ocean advocates signing this letter are writing to express our support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area. We are deeply committed to protecting and preserving essential habitats like Cashes Ledge which strengthen New England's resilience to climate change and supports the future of research, education and sustainable fisheries.

Cashes Ledge is a marine mountain range located 90 miles off of Portland, Maine. It is home to the most densely populated, cold-water kelp forest on the eastern seaboard and offers opportunities for environmental research and education. Like our terrestrial mountain ranges that we protect and conserve in the form of national and state parks, Cashes Ledge should also be considered a source of regional pride. While the Gulf of Maine has changed dramatically over the past 200 years, Cashes Ledge serves as a glimpse into the past and offers hope for ecological restoration and a prosperous future.

The Gulf of Maine's water temperatures are rising faster than 97% of the global ocean. The Proposed Sanctuary's still largely intact benthic habitats and diversity constitute one of the most comprehensive opportunities for stewardship in the Gulf of Maine. The Proposed Sanctuary will celebrate the region's rich natural heritage, create a refuge for vulnerable marine life as well as biodiversity generally, and provide opportunities for research and to enhance understanding of climate change impacts in the Gulf of Maine, as well as numerous education and collaboration opportunities for New Englanders to foster a connection to the Area.

As young people, we recognize that we must take diverse and complementary approaches to ensure a prosperous future for our ecosystems, climate and society. By permanently protecting Cashes Ledge, we hope to take one more step toward conservation goals in the region that will support the well-being, education and livelihoods of New Englanders for generations to come. The Gulf of Maine is changing in ways we are only beginning to understand, and will continue to change throughout our lifetimes. By permanently protecting Cashes Ledge, we can safeguard essential biodiversity, build ecosystem resilience to climate change and utilize the area to better understand the past, present and future of the Gulf of Maine.

We appreciate that the designation of a National Marine Sanctuary is a multi-step public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decision-making and collaboration. The designation of Cashes Ledge as a sanctuary should include a robust process for engagement of the public and stakeholders in the protection of this extraordinary public resource.

Securing long-lasting protections for this unique New England habitat is essential in our rapidly changing marine environment. As young people, we see marine conservation in threatened areas as a proactive step toward ensuring our future health and well-being in the region. We support this nomination and urge you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Dear Director Armor, NOAA's Office of National Marine Sanctuaries:

From the deepest and densest cold-water kelp forest on the eastern seaboard to its muddy basins, Cashes Ledge is a hotspot for vibrant and diverse marine life. I support sanctuary status for this invaluable national treasure.

A National Marine Sanctuary in this area would help conserve and protect the extraordinary and vulnerable marine wildlife and habitats of the Cashes Ledge Area, provide unparalleled scientific research and education opportunities, foster biodiversity and build climate resilience. As the Gulf of Maine's waters warm faster than 97% of the global ocean, a Cashes Ledge National Marine Sanctuary is an opportunity for biodiversity and climate stewardship.

Securing long-lasting protections for this unique ocean wonder is vital in our rapidly changing marine environment, which is why I support the nomination of a Cashes Ledge National Marine Sanctuary.

Sincerely,

Naya A

Re: Support for Nomination of the Cashes Ledge Area as a National Marine Sanctuary

Dear Director Armor,

July 24, 2024

On behalf of the Houlton Band of Maliseet Indians, I submit this letter in support of permanently protecting the Cashes Ledge area as a National Marine Sanctuary. We see this undersea mountain range as both a unique ecological resource that protected can help restore the Gulf of Maine and as a culturally significant site for Wabanaki people.

Our ancestors traveled regularly to fish, hunt and gather the abundant sea life that existed on our Atlantic Coast. Though we are now a small inland, riverine Tribe, over one hundred miles from the coast and hundreds of miles away from the unique ecosystems and diverse species that we are asking you to protect. Our belief is that everything is connected, and the land and creatures that inhabit the earth are living and are deserving of our respect. Atlantic Salmon once inhabited this river that we live along, and it is our hope to one day be able to fish for Salmon in these waters again. These fish are in danger, and a contributing factor in their decline is the health of the marine environment. Salmon, whose abundance, natural value, and seasonal spawning runs once supported the lives of our people, now are in need of our support.

We are very concerned about the health of the Gulf of Maine. This led to our participation in the Regional Oceans Planning process initiated by the Obama Administration and more recently, the Northeast Regional Oceans Council. Federal, State and Tribal participants of both have established a mutual goal of Healthy Ocean and Coastal Resources.

Protecting these critical habitats in perpetuity is essential to restoring species abundance and diversity, as well as increasing their resilience to climate change. Such protection is consistent with and essential to the Regional Planning Body's Goals, the National Oceans' Policy, and to the aspiration of our Tribe and its' members to one day fish for Salmon in the river that runs through our lands. It is our job to ensure the protection of these vital places so that our future generations can enjoy a healthy marine environment.

I urge NOAA to add Cashes Ledge to the Sanctuary Inventory list and to initiate the public process for its designation as a National Marine Sanctuary.

Woliwon,

Chief Clarissa Sabattis

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

350 Mass writes to express support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area. 350Mass is a grassroots organization fighting climate change in Massachusetts.

As the Gulf of Maine is overheating, with water temperatures rising faster than 97% of the global ocean, the Proposed Sanctuary's still largely intact benthic habitats and diversity constitute one of the most comprehensive opportunities for biodiversity and climate-stewardship in the Gulf of Maine. The Proposed Sanctuary will celebrate the region's rich natural heritage, create a refuge for vulnerable marine life as well as biodiversity generally, and provide opportunities for research and to enhance understanding of climate change impacts in the Gulf of Maine, as well as numerous education and collaboration opportunities for New Englanders to foster a connection to the Area.

350 Mass supports the inclusion of a Fully Protected Area within the Proposed Sanctuary to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. Amidst a changing climate that is impacting the Gulf of Maine in ways we are only beginning to understand, the scientific value and ecological importance of fully protecting this Cashes Ledge sub-area as a biodiversity refuge and a living laboratory and oceanographic research platform is vital.

350 Mass appreciates that the designation of a National Marine Sanctuary is a multi-step public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decision-making and collaboration. The designation of Cashes Ledge as a sanctuary should include a robust process for engagement of the public and stakeholders in the protection of this extraordinary public resource.

From Cashes Ledge's lush kelp to rocky outcroppings and deep muddy basins that provide an underwater oasis teeming with biodiverse marine life, securing long-lasting protections for this unique ocean wonder is vital in our rapidly changing marine environment.

350 Mass supports this nomination and urges you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

350 Mass Executive Committee

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

I am writing on behalf of the Blue Ocean Society for Marine Conservation to express support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary. Since 2001, we have been studying whales and other marine life and conducting educational programs in the Gulf of Maine.

We recognize the importance of extraordinary, biodiverse areas such as Cashes Ledge to the health of all marine life in the Gulf of Maine. Protecting this area is also crucial for scientific research and to build healthy marine populations that support New England's thriving ocean tourism industries. It is also important to build climate resilience, especially since the Gulf of Maine is one of the fastest-warming bodies of water in the world. We have seen the impacts of climate change in our 20+ years of study in this region, and know that it is more important than ever to protect these special places.

Located 90 miles off New England's coast in the heart of the Gulf of Maine, Cashes Ledge is an undersea mountain range and one of the most unique ecological structures in U.S. ocean waters. Home to myriad, and often vulnerable marine species and habitats, a sanctuary designation would help conserve and protect the extraordinary and vulnerable marine wildlife and habitats of the Cashes Ledge Area, provide unparalleled scientific research and education opportunities, and build climate resilience in a region that is among the fastest warming in the world's oceans.

The Proposed Sanctuary harbors a treasure trove of marine life living among the peaks and valleys of the Cashes Ledge, Parker Ridge, and Sigsbee Ridge formations, along with portions of the ecologically inter-connected adjacent deep Cashes and Ammen basins. Cashes Ledge contains all of the bottom types typical of the offshore Gulf of Maine and atop its highest peak, on Ammen Rock, lies the deepest, densest cold-water kelp forest on the eastern seaboard. Cashes Ledge's diverse habitats provide refuge for a remarkable diversity of marine life, from the Atlantic wolffish and the rare blue sponge to the unusual red cod. A variety of whale species have also been seen in this area. With increasing human impacts on whales, it is more important than ever for these majestic mammals to have areas of refuge from fishing, development and exploration.

Blue Ocean Society for Marine Conservation supports the inclusion of a Fully Protected Area within the Proposed Sanctuary to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. Amidst a changing climate that is impacting the Gulf of Maine in ways we are only beginning to understand, the scientific value and ecological importance of fully protecting this Cashes Ledge sub-area as a biodiversity refuge and a living laboratory and oceanographic research platform is vital.

We appreciate that the designation of a National Marine Sanctuary is a multi-step public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decision-making and collaboration. The designation of Cashes Ledge as a sanctuary should include a robust process for engagement of the public and stakeholders.

The Cashes Ledge region is a unique ocean wonder, like none other in the Gulf of Maine. Long-term protection of this region is important, especially as the ocean changes at a rapid pace.

Blue Ocean Society for Marine Conservation supports this nomination and urges you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

A handwritten signature in blue ink, appearing to read "Jennifer Kennedy", with a stylized flourish at the end.

Silver Spring, MD 20910

Re: Support for the National Marine Sanctuary Nomination of Cashes Ledge

Dear Director Armor,

My name is Brian Skerry and I write to express my strong support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area. I began diving and exploring the Gulf of Maine 47 years ago and for the last 26 years have worked as a *National Geographic* magazine photographer and documentary film producer specializing in marine wildlife and ocean ecosystems. Throughout my almost five decades of exploring the Gulf of Maine, I have seen tremendous loss of biodiversity. During my dives, decades ago, I routinely saw large schools of fish, abundant invertebrates, and healthy kelp habitats on nearly every dive. Today, I almost never see these things.

I first began diving Cashes Ledge in 2012 and it was like going back in time. When I first descended on Cashes, it was unlike anything I had experienced before. There was a healthy, thriving kelp forest in every direction as far as I could swim, and it was filled with life. I saw cod fish living within the kelp and the sky was filled with schools of pollock and herring. The benthic region was carpeted with baby, blue mussels, sea stars and anemones. On subsequent expeditions to Cashes, I saw magnificent Sei whales feeding directly on top of Ammen Rock, which is the highest point on Cashes Ledge. On every trip to this place, including most recently in 2023, I saw marine diversity and abundance.

The scientific research that has been conducted in the area, and the resulting data, confirms my personal observations.

- Located 90 miles off New England's coast in the heart of the Gulf of Maine, Cashes Ledge is an extraordinary undersea mountain range and one of the most unique ecological structures in U.S. ocean waters. Home to myriad, and often vulnerable marine species and habitats, a sanctuary designation in this area would help conserve and protect the extraordinary and vulnerable marine wildlife and habitats of the Cashes Ledge Area, provide unparalleled scientific research and education opportunities, and build climate resilience in a region that is among the fastest warming in the world's oceans.

- The Proposed Sanctuary harbors a treasure trove of marine life living among the peaks valleys of the Cashes Ledge, Parker Ridge, and Sigsbee Ridge formations, along with portions of the ecologically inter-connected adjacent deep Cashes and Ammen basins. This area supports a rich biodiversity of habitats and marine life. Cashes Ledge contains all of the bottom types typical of the offshore Gulf of Maine and atop its highest peak, on Ammen Rock, lies the deepest, densest cold-water kelp forest on the eastern seaboard. Cashes Ledge's diverse habitats ranging from lush kelp to rocky outcroppings and deep muddy basins, provide refuge for a remarkable diversity of marine life, from the Atlantic wolffish and the rare blue sponge to the unusual red cod.
- As the Gulf of Maine is overheating, with water temperatures rising faster than 97% of the global ocean, the Proposed Sanctuary's still largely intact benthic habitats and diversity constitute one of the most comprehensive opportunities for biodiversity and climate-stewardship in the Gulf of Maine. The Proposed Sanctuary will celebrate the region's rich natural heritage, create a refuge for vulnerable marine life as well as biodiversity generally, provide opportunities for public engagement and education, at sea and virtually, and scientific research including the impacts of climate change in the Gulf of Maine.
- The Proposed Sanctuary includes a "fully protected area" that prohibits all extractive and otherwise damaging activities to safeguard the biodiversity and habitats that depend upon the rare, intact kelp forest and interconnected habitats, in the face of dramatic climate impacts, while also providing a living laboratory for research and a better understanding of our marine environment. Permanent protection of this fully protected area will allow scientists to study the impacts of climate change in the offshore Gulf of Maine waters apart from additional human impacts.

I support this nomination and urge you to add Cashes Ledge to the Sanctuary Inventory and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

A handwritten signature in cursive script that reads "Brian Skerry".

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

The Brookline Bird Club, Inc. (BBC) is writing to you to express support for the nomination of the proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge area. The BBC is one of the oldest and most active North American bird clubs. With over 1,000 members, we lead bird trips every weekend and several annual pelagic bird trips devoted to offshore birds. Leaders and participants also note other living organisms such as whales, manta rays, sea turtles, flying fish, sharks, jelly fish and any other individuals encountered on the ocean.

I am a member of the BBC conservation committee and organized and led three or four trips to Cashes Ledge in the 1990s. The destination did not disappoint with one trip providing over 6000 Wilson's Storm-Petrels, 75 Leach's Storm-Petrels, and a rare Sabine's Gull. This area is claimed by three states--Maine, Massachusetts & New Hampshire--due to its unique location.

Located 90 miles off New England's coast in the heart of the Gulf of Maine, Cashes Ledge is an extraordinary undersea mountain range and one of the most unique ecological structures in United States ocean waters. Since it is home to myriad and often vulnerable marine species (ex: Loggerhead & Leatherback Turtles) and habitats, a sanctuary designation would help conserve and protect vital marine wildlife. It will protect habitats which provide unparalleled scientific research and education opportunities, as well as build climate resilience in a region that is among the fastest warming of the world's oceans.

It is an important feeding area for birds as well as for whales and predatory fish. This richly bio-diverse area needs protection to remain viable. Securing long-lasting protections for this unique ocean wonder is vital in our rapidly changing marine environment.

The proposed Sanctuary harbors a treasure trove of marine life among the peaks and valleys of the Cashes Ledge, Parker Ridge, and Sigsbee Ridge formations, along with portions of the ecologically inter-connected adjacent deep Cashes and Ammen basins. Cashes Ledge contains all of the bottom types typical of the offshore Gulf of Maine and atop its highest peak, on Ammen Rock, lies the deepest, densest cold-water kelp forest on the eastern seaboard. Cashes Ledge's diverse habitats, ranging from lush kelp to rocky outcroppings and deep muddy basins, provide refuge for a remarkable diversity of marine life, from the Atlantic wolffish and the rare blue sponge to the unusual red cod.

As the Gulf of Maine is overheating, with water temperatures rising faster than 97% of the global ocean, the proposed Sanctuary's still largely intact benthic habitats and diversity constitute one of the most comprehensive opportunities for biodiversity and climate-stewardship in the Gulf of

Maine. A Sanctuary will celebrate the region's rich natural heritage, create a refuge for vulnerable marine life as well as biodiversity generally, and provide opportunities for research to enhance understanding of climate change impacts in the Gulf of Maine, as well as numerous education and collaboration opportunities for New Englanders and other visitors.

The BBC supports the inclusion of a Fully Protected Area within the proposed Sanctuary to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. Amidst a changing climate that is impacting the Gulf of Maine in ways we are only beginning to understand, it is vital to protect this Cashes Ledge sub-area as a biodiversity refuge and a living laboratory and oceanographic research platform.

The BBC appreciates that the designation of a National Marine Sanctuary is a multi-step public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decision-making and collaboration. The designation of Cashes Ledge as a sanctuary should include a robust process for engagement of the public and stakeholders.

The Brookline Bird Club urges you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

Glenn d'Entremont

Recording Secretary, Conservation Committee member, and Trip Leader

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

The Center for Biological Diversity (“Center”) writes to express support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area. The Center believes that the welfare of human beings is deeply linked to nature — to the existence in our world of a vast diversity of wild animals and plants. Because diversity has intrinsic value, and because its loss impoverishes society, we work to secure a future for all species, great and small, with a focus on protecting the lands, waters, and climate that species need to survive.

Located 90 miles off New England’s coast in the heart of the Gulf of Maine, Cashes Ledge is an extraordinary undersea mountain range and one of the most unique ecological structures in U.S. ocean waters. Home to myriad, and often vulnerable marine species and habitats, a sanctuary designation in this area would help conserve and protect the extraordinary and vulnerable marine wildlife and habitats of the Cashes Ledge Area, provide unparalleled scientific research and education opportunities, and build climate resilience in a region that is among the fastest warming in the world’s oceans.

The Proposed Sanctuary harbors a treasure trove of marine life living among the peaks valleys of the Cashes Ledge, Parker Ridge, and Sigsbee Ridge formations, along with portions of the ecologically inter-connected adjacent deep Cashes and Ammen basins. This area supports a rich biodiversity of habitats and marine life. Cashes Ledge contains all of the bottom types typical of the offshore Gulf of Maine and atop its highest peak, on Ammen Rock, lies the deepest, densest cold-water kelp forest on the eastern seaboard. Cashes Ledge’s diverse habitats ranging from lush kelp to rocky outcroppings and deep muddy basins, provide refuge for a remarkable diversity of marine life, from the Atlantic wolffish and the rare blue sponge to the unusual red cod.

As the Gulf of Maine is overheating, with water temperatures rising faster than 97% of the global ocean, the Proposed Sanctuary’s still largely intact benthic habitats and diversity constitute one of the most comprehensive opportunities for biodiversity and climate-stewardship in the Gulf of Maine. The Proposed Sanctuary will create a refuge for vulnerable marine life as well as

biodiversity generally, and provide opportunities for research and to enhance understanding of climate change impacts in the Gulf of Maine.

To truly protect this area, NOAA should include a Fully Protected Area within the Proposed Sanctuary that prohibits all extractive and otherwise damaging activities to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. Amidst a changing climate that is impacting the Gulf of Maine in ways we are only beginning to understand, the scientific value and ecological importance of fully protecting this Cashes Ledge sub-area as a biodiversity refuge and a living laboratory and oceanographic research platform is vital.

From Cashes Ledge's lush kelp to rocky outcroppings and deep muddy basins that provide an underwater oasis teeming with biodiverse marine life, securing long-lasting protections for this unique ocean wonder is vital in our rapidly changing marine environment.

The Center supports this nomination and urges you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary, including the Fully Protected Area.

Sincerely,

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

On behalf of our 39 member communions, representing over 20,000 churches and over 100 Million Christians, Creation Justice Ministries writes to express support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area.

Creation Justice Ministries seeks justice for all of God's creation, both planet and people. We represent the creation care and environmental justice policies of major Christian denominations throughout the United States. We work in cooperation with 39 national faith bodies including Protestant denominations and Orthodox communions as well as regional faith groups, and congregants. We draw on the rich heritage of Christian scriptures and traditions which call us to protect, restore, and rightly share God's creation.

As followers of Christ, we are called to be faithful healers of God's creation. Cashes Ledge presents a unique opportunity to protect a sacred and ecologically-vital part of the ocean. We believe that permanently protecting the Cashes Ledge Area is necessary to preserve the vulnerable wildlife and habitats it encompasses. It is a truly irreplaceable biodiversity hotspot, which is why we are calling for sanctuary status to protect this astounding piece of God's creation.

The word "sanctuary" comes from the Latin word sanctus, meaning holy. In many faith traditions, the sanctuary is the place where God came to dwell. It is the holy place where believers can come to know and experience the presence of the divine. Cashes Ledge is an

extraordinary undersea mountain range home to myriad, and often vulnerable, marine species and habitats. A sanctuary designation in this area would affirm the holiness of the place and protect the creatures that inhabit it.

Cashes Ledge is a beautiful place of God's ocean, where we can go in awe and wonder to behold the wonder and splendor of God's creation. In addition to its scientific importance, climate resilience, and profound biodiversity, it is deserving of protection because of its inherent, unique beauty and sanctity in the eyes of the Creator.

Creation Justice Ministries also supports the inclusion of a Fully Protected Area within the Proposed Sanctuary to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. Amidst a changing climate that is impacting the Gulf of Maine in ways we are only beginning to understand, the scientific value and ecological importance of fully protecting this Cashes Ledge sub-area as a biodiversity refuge and a living laboratory and oceanographic research platform is vital. Securing long-lasting protections for this unique ocean wonder is crucial in our rapidly changing marine environment.

Robust community engagement is a value we hold dearly at Creation Justice Ministries. We appreciate that the designation of a National Marine Sanctuary is a multi-step public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decision-making and collaboration. The designation of Cashes Ledge as a sanctuary should include a robust process for engagement of the public and stakeholders in the protection of this extraordinary public resource.

On behalf of Christians and lovers of God's ocean, Creation Justice Ministries supports this nomination and urges you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

A handwritten signature in black ink, reading "Avery Davis Lamb". The signature is fluid and cursive, with the first name "Avery" being the most prominent.

Re: Support for Consideration of a Cashes
Ledge National Marine Sanctuary

Dear Director Armor:

CT Votes for Animals writes to express support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area.

CT Votes for Animals is a statewide, grass roots animal advocacy organization dedicated to improving the lives of animals by championing legislative change. CVA effects policy change by mobilizing animal supporters.

Located 90 miles off New England's coast in the heart of the Gulf of Maine, Cashes Ledge is an extraordinary undersea mountain range and one of the most unique ecological structures in U.S. ocean waters. Home to a myriad, and often vulnerable marine species and habitats, a sanctuary designation in the area would help conserve and protect the extraordinary and vulnerable marine wildlife and habitats of the Cashes Ledge Area, provide unparalleled scientific research and education opportunities, and build climate resilience in a region that is among the fastest warming in the world's oceans.

The Proposed Sanctuary harbors a treasure trove of marine life living among the peaks and valleys of Cashes Ledge, Parker Ridge and Sigsbee Ridge formations, along with portions of the ecologically inter-connected adjacent deep Cashes and Ammen basins. This area supports a rich biodiversity of habitats and marine life. Cashes Ledge contains all of the bottom types typical of the offshore Gulf of Maine and atop its highest peak, on Ammen Rock, lies the deepest, densest cold-water kelp forest on the eastern seaboard. Cashes Ledge's diverse habitats ranging from lush kelp to rocky outcroppings and deep muddy basins, provide refuge for a remarkable diversity of marine life, from the Atlantic wolffish and the rare blue sponge to the unusual red cod.

As the Gulf of Maine is overheating, with water temperatures rising faster than 97% of the global ocean, the Proposed Sanctuary's still largely intact benthic habitats and diversity constitute one of the most comprehensive opportunities for biodiversity and climate-stewardship in the Gulf of Maine. The Proposed Sanctuary will celebrate the region's rich natural heritage, create a refuge for vulnerable marine life as well as biodiversity generally, and provide opportunities for research and to enhance understanding of climate change

impacts in the Gulf of Maine, as well as numerous education and collaboration opportunities for New Englander's to foster a connection to the Area.

CT Votes for Animals supports the inclusion of a Fully Protected Area with the Proposed Sanctuary to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. Amidst a changing climate that is impacting the Gulf of Maine in ways we are only beginning to understand, the scientific value and ecological importance of fully protecting Cashes Ledge sub-area as a biodiversity refuge and a living laboratory and oceanographic research platform is vital.

CT Votes for Animals appreciates that the designation of National Marine Sanctuary is a multi-step public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decision-making and collaboration. The designation of Cashes Ledge as a sanctuary should include a robust process for engagement of the public and stakeholders in the protection of this extraordinary public resource.

From Cashes Ledge's lush kelp to rocky outcroppings and deep muddy basins that provide an underwater oasis teeming with biodiverse marine life, securing long-lasting protections for this unique ocean wonder is vital in our rapidly changing marine environment.

CT Votes for Animals supports this nomination and urges you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

Defenders of Wildlife writes to support the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area.

For over 75 years, Defenders of Wildlife has remained dedicated to protecting all native animals and plants in their natural communities, both terrestrial and marine. Given the twin crises our planet faces—the climate crisis and the species extinction crisis—it is more important than ever to protect ecosystems with high levels of biodiversity that can serve as climate refugia. Cashes Ledge is one such place.

Located 90 miles off New England's coast in the heart of the Gulf of Maine, Cashes Ledge is an extraordinary undersea mountain range and one of the most unique ecological structures in U.S. ocean waters. Home to myriad, and often vulnerable, marine species and habitats, a sanctuary designation in this area would help conserve and protect the extraordinary and vulnerable marine wildlife and habitats of the Cashes Ledge Area, provide unparalleled scientific research and education opportunities, and build climate resilience in a region that is among the fastest warming in the world's oceans.

The Proposed Sanctuary harbors a treasure trove of marine life living among the peaks valleys of the Cashes Ledge, Parker Ridge, and Sigsbee Ridge formations, along with portions of the adjacent, ecologically interconnected deep Cashes and Ammen basins. This area supports a rich biodiversity of habitats and marine life. Cashes Ledge contains all the bottom types typical of the offshore Gulf of Maine and atop its highest peak, on Ammen Rock, lies the deepest, densest cold-water kelp forest on the Eastern Seaboard. Cashes Ledge's diverse habitats, ranging from lush kelp to rocky outcroppings and deep muddy

basins, provide refuge for a remarkable diversity of marine life, from the Atlantic wolffish and the rare blue sponge to the unusual red cod.

As the Gulf of Maine is overheating, with water temperatures rising faster than 97% of the world's oceans, the Proposed Sanctuary's still largely intact benthic habitats and diversity constitutes one of the most comprehensive opportunities for biodiversity and climate-stewardship in the Gulf of Maine. The Proposed Sanctuary will celebrate the region's rich natural heritage, create a refuge for vulnerable marine life as well as biodiversity generally, and provide opportunities for research to enhance understanding of climate change impacts in the Gulf of Maine, as well as numerous education and collaboration opportunities for New Englanders to foster a connection to the area.

Defenders of Wildlife supports the inclusion of a Fully Protected Area within the Proposed Sanctuary to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. Amidst a changing climate that is affecting the Gulf of Maine in ways we are only beginning to understand, the scientific value and ecological importance of fully protecting this Cashes Ledge subarea as a biodiversity refuge and a living laboratory and oceanographic research platform are vital.

Defenders of Wildlife appreciates that the designation of a National Marine Sanctuary is a multistep public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decisionmaking and collaboration. The designation of Cashes Ledge as a national marine sanctuary should include a robust process for engagement of the public and stakeholders in the protection of this extraordinary public resource.

From Cashes Ledge's lush kelp to rocky outcroppings and deep muddy basins that provide an underwater oasis teeming with biodiverse marine life, securing longlasting protections for this unique ocean wonder is vital in our rapidly changing marine environment.

Defenders of Wildlife supports this nomination and urges you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

A handwritten signature in blue ink, appearing to read "Michael P. Senatore".

NOAA Office of National Marine Sanctuaries

John Armor

Director, Office of National Marine Sanctuaries

[1305 East-West Highway, 11th Floor](#)[Silver Spring, MD 20910](#)sanctuary.nominations@noaa.gov

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor

Gulf of Maine EcoArts writes to express support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area. Cashes Ledge is an oasis teeming with an outstanding diversity of marine wildlife and habitats that has long inspired me and the Gulf of Maine arts and education community. Securing long-lasting protections for this unique ocean wonder is vital in our rapidly changing marine environment.

In 2018, I founded Gulf of Maine EcoArts as an organization dedicated to educating the public about the existence of Cashes Ledge, the fact the Gulf of Maine was warming faster than 99% of all ocean waters in the world, and how the warming and other human impacts were negatively affecting the biodiversity in this region. I curated a team of artists and scientists to design, organize, and build two large scale public art and ecological installations: The first one, titled '*Majestic Fragility*' was installed at Bigelow Laboratory for Ocean Sciences in East Boothbay, Maine fall of 2021, open to the public until January 2023. In February 2023 we installed a second exhibition, '*SeaChange: Darkness & Light in the Gulf of Maine*' at Maine Maritime Museum in Bath, Maine. This was on display for a year.

In February, 2024 we de-installed '*SeaChange*' and moved it to Wabanaki Public Health & Wellness, in Bangor, Maine. There, the next iteration of this Project will be part of an upcoming permanent tribal Arts and Education center devoted to the Penobscot River basin. This center will include artists' version of the Penobscot river, Mt. Katahdin, Penobscot Bay and much of its wildlife. Highlighting the connection of the land to the sea, the exhibit will also include a 16'x 16' replica of Ammen Rock, Cashes Ledge's highest peaked mountain, Cashes Ledge's famous kelp forest, and educational information about its current state and importance of its conservation. It will be a place for the public to attend workshops, lectures, musical events, a café, and art exhibits.

In these Arts and Environmental Education Installations, Cashes Ledge has become both the primary example of hope, and our positive symbol for protecting all earth's ocean, lands, and air. Gulf of Maine EcoArts has worked with many professional artists, college interns, educators and students from over 16 Maine schools - from elementary through college levels, six marine scientists, and multiple environmental organizations. Over 62,000 people visited our exhibitions in East Boothbay, and Bath, Maine. All of our partners have been inspired by the Cashes Ledge area – its magnificent ecosystem and the opportunity and imperative to protect our ocean. Awarding Cashes Ledge national marine sanctuary status would be a fitting crown to our Project, and a deserved award to all the dedicated people, schools, scientists, organizations, and

donors who have worked hard to advance our goal of permanently protecting this extraordinary place.

Gulf of Maine EcoArts supports the inclusion of a Fully Protected Area within the Proposed Sanctuary to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. Amidst a changing climate that is impacting the Gulf of Maine in ways we are only beginning to understand, the scientific value and ecological importance of fully protecting this Cashes Ledge sub-area as a biodiversity refuge and a living laboratory and oceanographic research platform is vital.

Gulf of Maine EcoArts appreciates that the designation of a National Marine Sanctuary is a multi-step public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decision-making and collaboration. The designation of Cashes Ledge as a sanctuary should include a robust process for engagement of the public and stakeholders in the protection of this extraordinary public resource.

From Cashes Ledge's lush kelp to rocky outcroppings and deep muddy basins that provide an underwater oasis teeming with biodiverse marine life, securing long-lasting protections for this unique ocean wonder is vital in our rapidly changing marine environment.

Gulf of Maine EcoArts supports this nomination and urges you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

Anna D. Dibble – Founding Director of Gulf of Maine EcoArts

NOAA Office of National Marine Sanctuaries

John Armor
Director, Office of National Marine Sanctuaries
1305 East-West Highway, 11th Floor
Silver Spring, MD 20910
sanctuary.nominations@noaa.gov

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

I write on behalf of the Environmental Council of Rhode Island (ECRI) in support of the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area.

ECRI is a coalition of over 60 organizations as well as individuals whose mission is to develop and advocate for policies and laws that protect and enhance the environment in Rhode Island. ECRI has long supported permanent protection for Cashes Ledge. In 2015, ECRI wrote to NOAA's Greater Atlantic Regional Administrator in support of the permanent protection of Cashes Ledge, in recognition that the habitats of Cashes Ledge are among the most diverse and fragile in all of New England. Future New England generations depend on effective stewardship of our region's ocean resources, which support nearly 230,000 jobs, primarily in the tourism and recreation sectors. These jobs rely on clean coastal waters and beaches and healthy, abundant fish and wildlife.

The unique Cashes Ledge Area encompasses an underwater mountain range. The peaks and valleys of its ridges and basins serve as habitat for an incredible array of ocean wildlife. One of its peaks, Ammen Rock, holds the deepest, densest cold-water kelp forest along the eastern seaboard. Cashes Ledge's diverse habitats, ranging from lush kelp forests to rocky outcroppings and deep muddy basins, provide refuge for a remarkable diversity of marine life, from the Atlantic wolffish and the rare blue sponge, to the unusual red cod. Securing long-lasting protections for this unique ocean wonder is vital to the health of our ocean and the communities that rely upon it.

As the Gulf of Maine's waters warm faster than 97% of the global ocean, the proposed sanctuary's still largely intact benthic habitats and biodiversity present one of the most comprehensive opportunities for species protection and climate-stewardship in the Gulf of Maine. Establishment of the proposed sanctuary will celebrate the region's rich natural heritage, create a refuge for vulnerable marine life as well as biodiversity generally, provide opportunities for research, offer an opportunity to enhance our understanding of climate change impacts in the Gulf of Maine, and provide numerous education and collaboration opportunities for New Englanders to foster a connection to the area.

Ocean habitat protection serves as a tool for building resilience from the impacts of climate change. Therefore, ECRI supports the establishment of the proposed sanctuary's fully protected sub-area, encompassing the kelp forest and adjacent, interconnected habitats, to act as a biodiversity and climate refuge and serve as a living laboratory for scientists to better understand the impacts of climate change on our region.

ECRI appreciates that the designation of a National Marine Sanctuary is a multi-step public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decision-making and collaboration. The designation of Cashes Ledge as a sanctuary should include a robust process for engagement of the public and stakeholders in the protection of this extraordinary public resource.

Cashes Ledge—with its lush kelp forests, rocky outcroppings, and deep muddy basins that provide an underwater oasis teeming with diverse marine life—is a unique and fragile natural wonder. Securing long lasting protections for this unique ocean wonder is vital in our rapidly changing marine environment.

ECRI supports this nomination and urges you to add Cashes Ledge to the Sanctuary Inventory and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

James Crowley
President
Environmental Council of Rhode Island

294 Washington St., Ste. 500
Boston, MA 02108
(617) 747-4400

John Armor, Director
Office of National Marine Sanctuaries
1305 East-West Highway, 11th Floor
Silver Spring, MD 20910

July 24, 2024

Dear Director Armor,

Environment Massachusetts Research & Policy Center works to protect the places that people love and promote core environmental values, such as clean air to breathe, clean water to drink, and clean energy to power our lives. We are writing in strong support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area.

The ocean is a core part of New England's identity. From days at the beach to the time-honored tradition of visits to the New England Aquarium, celebrating the ocean and the marine life within is one of the benefits of living in the Bay State.

But the ocean is at risk: The Gulf of Maine is warming faster than 96 percent of the world's oceans, adding even more stress to New England's marine ecosystems.¹ There's much work to be done to halt and repair this damage, but one of the most consequential tasks is also one of the simplest: We can protect and conserve some of the last truly wild places in our ocean. Places like Cashes Ledge.

Cashes Ledge is a wonderland of kelp fronds waving in the current, where cod and crabs hide. Craggy underwater mountains plummet to sandy plains while predators like sharks hunt among the blades of kelp, cracks and crevices, sand flats and water column. The tallest underwater peak, Ammen Rock, stands about 90 miles off the Massachusetts coast in the center of the Gulf of Maine mountain range. Just like a terrestrial national park, this incredible geological feature creates a unique "mosaic" of habitats.²

On Ammen Rock sits the deepest, densest and healthiest kelp forest in the Gulf of Maine and possibly the Northwest Atlantic, a veritable "oasis" for fish.³ Cliff faces dropping into the deep Gulf host a kaleidoscope of yellow, red and rare blue sponges.⁴ In the water column, life adapted to different temperatures and conditions thrive, fed by currents and abundant kelp. The area's steep cliffs form internal waves that circulate nutrient-rich water and send kelp remnants throughout the ecosystem.

(617) 747-4400

This region is a hotspot for marine mammals, including humpback, minke, and fin whales that flock to the rich feeding grounds.⁵ But they're not the only animals traveling from afar: seabirds travel thousands of miles to feed in Cashes Ledge.⁶

Cashes Ledge is one of the last and best places to find Atlantic cod, which remains overfished in the Gulf of Maine following a massive collapse in the late 20th century.⁷ ⁸ In contrast to the greater Gulf, Cashes Ledge is home to big, healthy cod.⁹ Their presence may be key in keeping the ecosystem healthy: at places like Cashes Ledge, cod and other fish have historically been key predators in regulating sea urchins, letting the kelp thrive by preventing the urchins from overgrazing.¹⁰

This diversity of habitats and species, as well as their beauty, led ocean explorer and marine scientist Sylvia Earle to call Cashes Ledge the "Yellowstone of the North Atlantic."¹¹

From Yosemite National Park to the Arctic National Wildlife Refuge, we have long recognized the need to protect special natural places for posterity. While only a fortunate few of us will ever see Cashes Ledge in person, we can still appreciate the amazing plant and animal life filling its waters. Permanently protecting its kelp forest and surrounding ecosystems will be a great step towards preserving the beauty and abundance once found throughout the Gulf of Maine. It will help our whales feed, our seabirds soar and our cod recover. It will be a crucial investment in the future our ocean needs.

For this reason, I urge you to accept the nomination and move swiftly to begin designation for the Proposed Cashes Ledge National Marine Sanctuary.

Sincerely,

Johanna Neumann

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

First Congregational Church, UCC, South Portland, Maine writes to express support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area.

We are a United Church of Christ congregation that has been a presence in our city on Casco Bay for nearly 300 years. Our faith calls us to compassionate concern for all our neighbors, human and more-than-human. Our church building stands on a height-of-land called Meeting House Hill, only one mile from Casco Bay off the Gulf of Maine. The sea surrounds us and has been part of the heritage of this community for generations, and before us, of the Wabanaki nations who lived here for thousands of years prior to European settlement.

Cashes Ledge is a treasure-house of biodiversity. Here in South Portland, Maine, as everywhere, we are now experiencing the devastating effects of human-caused climate change, on land and in the ocean. The timeline for effective action is shrinking. It is crucial not to miss this opportunity, right in our own neighborhood, to permanently protect a unique ecological structure and the myriad marine species who depend upon this habitat.

For us, the fact that this particular refuge of life lies just 90 miles from our church, in the heart of the already-threatened and rapidly warming Gulf of Maine, makes this decision even more urgent and morally compelling.

A permanent sanctuary designation for the Cashes Ledge area would help conserve and protect its extraordinary marine wildlife and habitats. It would provide unparalleled scientific research and education opportunities, and build climate resilience in a region that is among the fastest warming in the world's oceans.

The Gulf of Maine's water temperatures are already rising faster than 97% of the global ocean. Yet the Proposed Sanctuary still contains largely intact habitats, including the deepest, densest kelp forest on the Eastern seaboard. The rocky outcroppings and deep muddy basins of this undersea mountain range provide nutrients and oxygen-rich waters for every kind of marine life typical of the Gulf of Maine, including cod and pollock, migrating bluefin tuna, endangered North Atlantic right whales and humpback whales, and rare, threatened species such as Atlantic wolffish, blue sponge and red cod. Many scientists believe it represents the best remaining example of an undisturbed Gulf of Maine ecosystem.

This is one of the most comprehensive opportunities for climate stewardship available to us in the Gulf of Maine. The Proposed Sanctuary will celebrate the region's rich natural heritage, create a refuge for biodiversity, provide unparalleled opportunities for critical research

and enhance our understanding of climate change impacts. Cashes Ledge is a living laboratory we cannot afford to lose.

As you are no doubt aware, pressure is now mounting to open Cashes Ledge to commercial fishing with modern bottom-trawling fishing gear. The damage this would cause would take centuries to repair. At this critical moment in our response to the ocean impacts of climate change, allowing such destruction would deprive scientists, environmental policy-makers and the public from the benefits of saving this threatened and unique ecosystem.

Maine has a rich heritage of preserving irreplaceable natural landscapes such as Acadia National Park, dozens of local land trusts, and Baxter State Park, pieced together with gifts to the people of Maine from Percival Baxter from 1931 to 1962, under the condition that it remain “forever wild.”

We believe we are called, in our own critical times, to continue and extend the Maine tradition of preservation of our irreplaceable natural treasures to the ocean environment, on which all of life depends.

We believe now is the time to heed the voices of the many marine scientists who support this nomination, such as Dr. Sylvia Earle, former Chief Scientist of NOAA, world-renowned American marine biologist and National Geographic Society Explorer-in-Residence, who calls Cashes Ledge “the Yellowstone of the North Atlantic...an underwater extension of the mountains of Acadia National Park. . . a ‘Hope Spot.’”

Our faith calls us to stand on the side of hope, wherever it can be found.

First Congregational Church, UCC, of South Portland, Maine supports this nomination to permanently protect Cashes Ledge. We urge you to add the proposed area to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

**FIRST CONGREGATIONAL CHURCH, UNITED CHURCH OF CHRIST, SOUTH
PORTLAND, MAINE**

Re: Letter for Support for Cashes Ledge National Marine Sanctuary

Dear Director Armor,

Please accept this letter as a strong and impassioned letter of support for the nomination of the Proposed *Cashes Ledge National Marine Sanctuary* as nominated by CLF to protect the Cashes Ledge Area. I am the president and founder of FLUKES: International Whale Tours, a Maine-based whale watch tour company founded in 2011 that operates day-long and extended educational tours in the US and internationally. On October 14, 2023, I chartered the 112' jet-powered whale watch catamaran the *Friendship V* from Bar Harbor and took 97 paying passengers and a team of naturalist trip leaders and expert photographers to Cashes Ledge on an all-day whale and seabird trip. We had an incredible day that was filled with whale and seabird sightings, and on Cashes Ledge saw a magnificent pod of between 70 to 100 common bottlenose dolphins, two finback whales, and many incredible seabirds. In waters near the Cashes, a few miles east, we found a mother humpback whale named Dross and her calf feeding and five common dolphins. I am again chartering a whale watching vessel to conduct a tour to Cashes this summer or fall. To have this unique and special region of the ocean become designated as a National Marine Sanctuary would have a lasting economic benefit for my company and others and afford us the opportunity to provide more all-day tours into the Gulf of Maine to allow the public to witness the sanctuary, and an offshore marine ecosystem, for themselves.

I have worked as a whale watch naturalist and researcher on the Gulf of Maine for over 30 years. During that time, I have had the great fortune to visit Cashes Ledge on several research cruises. My first trip to Cashes Ledge took place on 12/13/2011 while conducting right whale surveys with the New England Aquarium. On this day we saw 35 right whales in total in the waters between Jordan Basin and Cashes. We ended the day on Cashes Ledge with about 20 right whales, many of which were breaching at sunset. On the return trip the waters behind the boat were teeming with a brilliant blue bioluminescence. I went on two additional summer trips in June and in August I was onboard research cruises that found lots of fin whales and basking sharks in the waters around Cashes Ledge. This place is a special marine area and I believe should be a sanctuary with no ground fishing so this area can be a breeding area for large fish and benefit the surrounding waters through the spillover effect. People want vibrant, abundant, and healthy oceans and more than ever we need areas that anchor the ecosystem in the face of increasing climate change.

FLUKES supports the inclusion of a "Fully Protected Area" within the Proposed Sanctuary to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. Amidst a changing climate that is impacting the Gulf of Maine in ways we are only beginning to understand, the scientific value and ecological importance of fully protecting this Cashes Ledge sub-area as a

biodiversity refuge and a living laboratory and oceanographic research platform is vital.

FLUKES appreciates that the designation of a National Marine Sanctuary is a multi-step public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decision-making and collaboration. The designation of Cashes Ledge as a sanctuary should include a robust process for engagement of the public and stakeholders in the protection of this extraordinary public resource.

From Cashes Ledge's lush kelp to rocky outcroppings and deep muddy basins that provide an underwater oasis teeming with biodiverse marine life, securing long-lasting protections for this unique ocean wonder is vital in our rapidly changing marine environment.

FLUKES fully supports this nomination and urges you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

A handwritten signature in black ink, appearing to read 'R. Zack Klyver', with a long horizontal flourish extending to the right.

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

I have³ lived in both Northern New England and Southern New England. In the northern forest and in a southern NE port city. New Englanders are attached at the hip to the ocean. We love the sandy beaches and the bold headlands of granite. But what really attaches New Englanders to the coast is the abundant life we see and eat there. From Swordfish caught off Georges Banks to aquaculture in the Sakonnet, the islands of seabirds, the leaping Dolphins seen in a storm from the Block Island Ferry, to the vast schools of menhaden seen in downtown being chased in inches of water by cormorants. The creatures of the ocean draw us.

But we all know life in the sea is imperiled, as if life everywhere, by the rolling climate catastrophe. The acidification of the water, the higher temperatures, the stronger storms, the shifting fisheries, all affect not only the ocean, but the communities that rely on it for their daily bread, and the communities that rely on it for occasional recreation. The man made stressors on the ocean are growing. 8 billion of us are putting a lot of stress on every ecosystem on the planet. So when we have an opportunity to keep an ecosystem as healthy and resilient as Cashes

Ledge is, when we have a place that will provide space for climate refugees, and for the creatures of the ocean to evolve with the changes, we should keep it intact.

I have for more than 30 years heard the arguments for and against protecting ocean areas, especially the most productive places. Everything I have been able to find says that protecting key spots like Cashes Ledge provides fishers with a better livelihood outside the reserve as the reserve can produce enough critters and fish that many will strike out for other locations beyond the boundaries and be caught without undercutting the breeding stocks.

To me protecting places of great productivity insures the productivity will continue to feed us for the foreseeable future, while also feeding our souls. Please declare Cashes Ledge a National Marine Sanctuary.

Greg Gerritt

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

Halcyon writes to express support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area. Halcyon is a Maine-based nonprofit organization that strives to inspire environmental stewardship through music and the arts. We collaborate with musicians, scientists, students, composers, artists, and filmmakers to create multimedia performances that blend art and live music with contextualized fact and film to celebrate Maine's natural resources and draw attention to their vulnerabilities in the face of climate change. With many of our programs focusing on the immense changes happening in the Gulf of Maine, we recognize the importance of maintaining healthy and resilient marine ecosystems. The designation of Cashes Ledge as a Marine Sanctuary is just one step towards meaningful action.

Located 90 miles off New England's coast in the heart of the Gulf of Maine, Cashes Ledge is an extraordinary undersea mountain range and one of the most unique ecological structures in U.S. ocean waters. Home to myriad, and often vulnerable marine species and habitats, a sanctuary designation in this area would help conserve and protect the extraordinary and vulnerable marine wildlife and habitats of the Cashes Ledge Area, provide unparalleled scientific research and education opportunities, and build climate resilience in a region that is among the fastest warming in the world's oceans.

The Proposed Sanctuary harbors a treasure trove of marine life living among the peaks and valleys of the Cashes Ledge, Parker Ridge, and Sigsbee Ridge formations, along with portions of the ecologically inter-connected adjacent deep Cashes and Ammen basins. This area supports a rich biodiversity of habitats and marine life. Cashes Ledge contains all of the bottom types typical of the offshore Gulf of Maine and atop its highest peak, on Ammen Rock, lies the deepest, densest cold-water kelp forest on the eastern seaboard. Cashes Ledge's diverse habitats ranging from lush kelp to rocky outcroppings and deep muddy basins, provide refuge for a remarkable diversity of marine life, from the Atlantic wolffish and the rare blue sponge to the unusual red cod.

As the Gulf of Maine is overheating, with water temperatures rising faster than 97% of the global ocean, the Proposed Sanctuary's still largely intact benthic habitats and diversity constitute one of the most comprehensive opportunities for biodiversity and climate-stewardship in the Gulf of Maine. The Proposed Sanctuary will celebrate the region's rich natural heritage, create a refuge for vulnerable marine life as well as biodiversity generally, and provide opportunities for research and to enhance understanding of climate change impacts in the Gulf of Maine, as well as numerous education and collaboration opportunities for New Englanders to foster a connection to the Area.

Halcyon supports the inclusion of a Fully Protected Area within the Proposed Sanctuary to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. Amidst a changing climate that is impacting the Gulf of Maine in ways we are only beginning to understand, the scientific value and ecological importance of fully protecting this Cashes Ledge

6 Broad Street, Rockland ME 04841 | 207.380.6999 | halcyonstringquartet.org

sub-area as a biodiversity refuge and a living laboratory and oceanographic research platform is vital.

Halcyon appreciates that the designation of a National Marine Sanctuary is a multi-step public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decision-making and collaboration. The designation of Cashes Ledge as a sanctuary should include a robust process for engagement of the public and stakeholders in the protection of this extraordinary public resource.

From Cashes Ledge's lush kelp to rocky outcroppings and deep muddy basins that provide an underwater oasis teeming with biodiverse marine life, securing long-lasting protections for this unique ocean wonder is vital in our rapidly changing marine environment.

Halcyon supports this nomination and urges you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

Sophie Davis

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

The Healthy Ocean Coalition writes to express support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area. We are a national community of ocean lovers working to protect and restore ocean health. We work together to amplify the work and voices of our community members loud enough for those in power to hear and, together, we advocate for effective, immediate, and systematic change.

As a grassroots advocacy and policy organization, our community collectively informs, shapes, and influences conservation and climate policy by growing capacity, providing support and resources, and centering the voices, wisdom, and lived experiences of this diverse group of advocates, thereby guiding United States climate change, justice, and ocean conservation policy with those most affected in the driver's seat.

We are writing today because a pillar of our work is protecting important ocean places. Located 90 miles off New England's coast in the heart of the Gulf of Maine, Cashes Ledge is an extraordinary undersea mountain range and one of the most unique ecological structures in U.S. ocean waters. Home to myriad, and often vulnerable marine species and habitats, a sanctuary designation in this area would help conserve and protect the extraordinary and vulnerable marine wildlife and habitats of the Cashes Ledge Area, provide unparalleled scientific research and education opportunities, and build climate resilience in a region that is among the fastest warming in the world's oceans.

The Proposed Sanctuary harbors a treasure trove of marine life living among the peaks and valleys of the Cashes Ledge, Parker Ridge, and Sigsbee Ridge formations, along with portions of the ecologically inter-connected adjacent deep Cashes and Ammen basins. This area supports a rich biodiversity of habitats and marine life. Cashes Ledge contains all of the bottom types typical of the offshore Gulf of Maine and atop its highest peak, on Ammen Rock, lies the deepest, densest cold-water kelp forest on the eastern seaboard. Cashes Ledge's diverse habitats ranging from lush kelp to rocky outcroppings and deep muddy basins, provide refuge for a remarkable diversity of marine life, from the Atlantic wolffish and the rare blue sponge to the unusual red cod.

As the Gulf of Maine overheats, with water temperatures rising faster than 97% of the global ocean, the Proposed Sanctuary's still largely intact benthic habitats and diversity constitute one of the most comprehensive opportunities for biodiversity and climate-stewardship in the Gulf of Maine. The Proposed Sanctuary will celebrate the region's rich natural heritage, create a refuge for vulnerable marine life as well as biodiversity generally, and provide opportunities for research and to enhance understanding of climate change impacts in the Gulf of Maine, as well as numerous education and collaboration opportunities for New Englanders to foster a connection to the Area.

The Healthy Ocean Coalition supports the inclusion of a Fully Protected Area within the Proposed Sanctuary to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. Amidst a changing climate that is impacting the Gulf of Maine in ways we are only beginning to understand, the scientific value and ecological importance of fully protecting this Cashes Ledge sub-area as a biodiversity refuge and a living laboratory and oceanographic research platform is vital.

We appreciate that the designation of a National Marine Sanctuary is a multi-step public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decision-making and collaboration. The designation of Cashes Ledge as a sanctuary should include a robust process for engagement of the public and stakeholders in the protection of this extraordinary public resource. We are looking forward to participating in that process.

From Cashes Ledge's lush kelp to rocky outcroppings and deep muddy basins that provide an underwater oasis teeming with biodiverse marine life, securing long-lasting protections for this unique ocean wonder is vital in our rapidly changing marine environment.

The undersigned Healthy Ocean Coalition members support this nomination and urge you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

On behalf of the Ipswich River Watershed Association, I am pleased to write to express our support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area. The Ipswich River Watershed Association (IRWA) is the voice of the Ipswich River. We work to make sure there is enough clean water for people, fish, and wildlife, now and for years to come. Together with scientists, the watershed community, and volunteers, we develop solutions to the river's problems and work towards restoration of riverine function and ecology.

The Ipswich River watershed covers approximately 148 square miles, including all or part of 21 communities along the North Shore of Massachusetts. The river has a documented history of fish runs, including blueback herring, shad, alewife, and even salmon who historically swam upstream to spawn. Over time, man-made barriers such as mill dams and stream diversions, combined with increased development and changing climates, have dramatically affected the river's sensitive ecosystem. One of our main goals as an organization is to restore fish passage and fisheries in the river, which is tied to a larger, regional objective to support a robust herring population, a keystone species essential for healthy marine ecosystems in the Gulf of Maine. Our work is thereby linked to the proposed Cashes Ledge National Marine Sanctuary and we are very supportive of efforts to protect this critical marine ecosystem.

Located 90 miles off New England's coast in the heart of the Gulf of Maine, Cashes Ledge is an extraordinary undersea mountain range and one of the most unique ecological structures in U.S. ocean waters. Home to myriad, and often vulnerable marine species and habitats, a sanctuary designation in this area would help conserve and protect the extraordinary and vulnerable marine wildlife and habitats of the Cashes Ledge Area, provide unparalleled scientific research and education opportunities, and build climate resilience in a region that is among the fastest warming in the world's oceans.

As the Gulf of Maine is overheating, with water temperatures rising faster than 97% of the global ocean, the Proposed Sanctuary's still largely intact benthic habitats and diversity constitute one of the most comprehensive opportunities for biodiversity and climate-stewardship in the Gulf of Maine. In our organization's efforts to restore migratory fish populations, we can heavily influence restoration of riverine habitats but the opportunities to support the ocean phases of the migratory fish life cycles are few and far between. That is a primary reason why the Ipswich River Watershed Association supports the inclusion of a Fully Protected Area within the Proposed Sanctuary to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats.

The Ipswich River Watershed Association appreciates that the designation of a National Marine Sanctuary is a multi-step public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decision-making and collaboration. The designation of Cashes Ledge as a sanctuary should include a robust process for engagement of the public and stakeholders in the protection of this extraordinary public resource.

The Ipswich River Watershed Association supports this nomination and urges you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor:

On behalf of our 30,000 members, supporters, and volunteers, Maine Audubon writes to express support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area. Maine Audubon is an independent, state-based wildlife conservation non-profit – we fulfill our mission to “conserve Maine wildlife and wildlife habitat” by engaging people of all ages in nature through a science-based approach to education, conservation, and advocacy.

Many of Maine’s most iconic species reside in the Gulf of Maine, including the famous Atlantic Puffin, the important American Lobster, and endangered marine mammals like the North Atlantic Right Whale. Balancing the competing uses of the Gulf—such as shipping, fishing, and offshore wind—with necessary protections for wildlife is a top priority, and sometimes that balance requires setting aside special areas for protection. One such area is Cashes Ledge.

Located 90 miles off New England’s coast in the heart of the Gulf of Maine, Cashes Ledge is an extraordinary undersea mountain range and one of the most unique ecological structures in U.S. ocean waters. Home to myriad, and often vulnerable marine species and habitats, a sanctuary designation in this area would help conserve and protect the extraordinary and vulnerable marine wildlife and habitats of the Cashes Ledge Area, provide unparalleled scientific research and education opportunities, and build climate resilience in a region that is among the fastest warming in the world’s oceans.

The Proposed Sanctuary harbors a treasure trove of marine life living among the peaks and valleys of the Cashes Ledge, Parker Ridge, and Sigsbee Ridge formations, along with portions of the ecologically inter-connected adjacent deep Cashes and Ammen basins. This area supports a rich biodiversity of habitats and marine life. Cashes Ledge contains all of the bottom types typical of the offshore Gulf of Maine and atop its highest peak, on Ammen Rock, lies the deepest, densest cold-water kelp forest on the eastern seaboard. Cashes Ledge’s diverse habitats ranging from lush kelp to rocky outcroppings and

deep muddy basins, provide refuge for a remarkable diversity of marine life, from the Atlantic wolffish and the rare blue sponge to the unusual red cod.

As the Gulf of Maine is overheating, with water temperatures rising faster than 97% of the global ocean, the Proposed Sanctuary's still largely intact benthic habitats and diversity constitute one of the most comprehensive opportunities for biodiversity and climate-stewardship in the Gulf of Maine. The Proposed Sanctuary will celebrate the region's rich natural heritage, create a refuge for vulnerable marine life as well as biodiversity generally, and provide opportunities for research and to enhance understanding of climate change impacts in the Gulf of Maine, as well as numerous education and collaboration opportunities for New Englanders to foster a connection to the Area.

Maine Audubon supports the inclusion of a Fully Protected Area within the Proposed Sanctuary to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. Amidst a changing climate that is impacting the Gulf of Maine in ways we are only beginning to understand, the scientific value and ecological importance of fully protecting this Cashes Ledge sub-area as a biodiversity refuge and a living laboratory and oceanographic research platform is vital.

Maine Audubon appreciates that the designation of a National Marine Sanctuary is a multi-step public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decision-making and collaboration. The designation of Cashes Ledge as a sanctuary should include a robust process for engagement of the public and stakeholders in the protection of this extraordinary public resource.

From Cashes Ledge's lush kelp to rocky outcroppings and deep muddy basins that provide an underwater oasis teeming with biodiverse marine life, securing long-lasting protections for this unique ocean wonder is vital in our rapidly changing marine environment.

Maine Audubon supports this nomination and urges you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

Maine Conservation Voters (“MCV”) writes to express support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area. Our organization represents more than 13,000 members and supporters dedicated to building a just, thriving future for all by acting on the climate crisis, protecting the environment, and safeguarding our democracy.

We face a biodiversity, climate, and pollution polycrisis. This crisis is having severe effects on the Gulf of Maine, one of the fastest warming bodies of water on the planet. MCV works tirelessly to clean our waters, conserve wildlife and habitat, and champion the clean energy transition.

We believe we can have our cake and eat it, too. That’s why MCV supports the protection of Cashes Ledge and the responsible development of commercial-scale offshore wind in the Gulf of Maine. Allowing permitted energy development and cable placement in the broader Proposed Sanctuary while excluding such activities from the proposed Fully Protected Area appropriately balances conservation needs with climate action.

As an organization that centers racial justice and tribal consultation in all we do, we consider it imperative that the Office of National Marine Sanctuaries works in the closest consultation with the Tribal Nations in Maine, New Hampshire, and Massachusetts regarding the Proposed Sanctuary’s boundaries and allowed activities.

From Cashes Ledge’s lush kelp to rocky outcroppings and deep muddy basins that provide an underwater oasis teeming with biodiverse marine life, securing long-lasting protections for this unique ocean wonder is vital in our rapidly changing marine environment.

MCV supports this nomination and urges you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

Nicholas Janzen, Esq.

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

On behalf of Mass Audubon, I am writing to express support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area. Mass Audubon is the largest nature-based conservation organization in New England, with 160,000 members and supporters. We advocate for impactful environmental policies that address the greatest challenges facing the environment today: climate change, biodiversity, and inequitable access to nature.

Mass Audubon's concerns for biodiversity and the impacts of climate change include the ocean as well as terrestrial and inland wetland resources. Mass Audubon supported the adoption of Ocean Management laws at both the state and federal level, and the designation of protected areas including the Stellwagen Bank National Marine Sanctuary and the Northeast Canyons and Seamounts Marine National Monument. The Gulf of Maine is a particularly rich and diverse area, and it is also one of the fastest warming areas of ocean globally. Our interest in these habitats includes both marine life and the habitats they depend on, including whales and other marine mammals, sea turtles, and fish, as well as birds that forage in and migrate over the Gulf.

Located 90 miles off New England's coast in the heart of the Gulf of Maine, Cashes Ledge is an extraordinary undersea mountain range and one of the most unique ecological structures in U.S. ocean waters. Home to myriad, and often vulnerable marine species and habitats, a sanctuary designation in this area would help conserve and protect these special resources, provide unparalleled scientific research and education opportunities, and build climate resilience in an ocean environment at high risk from the impacts of climate change.

The Proposed Sanctuary harbors a treasure trove of marine life among the peaks and valleys of the Cashes Ledge, Parker Ridge, and Sigsbee Ridge formations, along with portions of the ecologically inter-connected adjacent deep Cashes and Ammen basins. This area supports a rich diversity of habitats and marine life. Cashes Ledge contains all of the bottom types typical of the offshore Gulf of

Maine. Atop its highest peak, on Ammen Rock, lies the deepest, densest cold-water kelp forest on the eastern seaboard. Cashes Ledge's habitats range from lush kelp to rocky outcroppings and deep muddy basins, providing refuge for a remarkable diversity of marine life, from the Atlantic wolffish and the rare blue sponge to the unusual red cod.

As the Gulf of Maine is overheating, with water temperatures rising faster than 97% of the global ocean, the Proposed Sanctuary's still largely intact benthic habitats and diversity constitute one of the most comprehensive opportunities for biodiversity and climate-stewardship in the Gulf of Maine. The Proposed Sanctuary will celebrate the region's rich natural heritage, create a refuge for vulnerable marine life as well as biodiversity generally, and provide opportunities for research and to enhance understanding of climate change impacts in the Gulf of Maine, as well as numerous education and collaboration opportunities for New Englanders to foster a connection to the Area.

Mass Audubon supports the inclusion of a Fully Protected Area within the Proposed Sanctuary to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. Amidst a changing climate that is impacting the Gulf of Maine in ways we are only beginning to understand, the scientific value and ecological importance of fully protecting this Cashes Ledge sub-area as a biodiversity refuge and a living laboratory and oceanographic research platform is vital. BOEM has acknowledged the sensitivity and importance of Cashes Ledge and excluded this area in the proposed offshore wind lease areas. Mass Audubon supports the responsible deployment of offshore wind, and this decision on the lease areas is consistent with that.

Mass Audubon appreciates that the designation of a National Marine Sanctuary is a multi-step public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decision-making and collaboration. The designation of Cashes Ledge as a sanctuary should include a robust process for engagement of the public and stakeholders in the protection of this extraordinary public resource.

Mass Audubon supports this nomination and urges you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

A handwritten signature in black ink, appearing to read 'Michelle Manion', with a stylized flourish at the end.

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

Mystic Aquarium writes to express our strongest support for the nomination of the proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge region in the Gulf of Maine. The mission of Mystic Aquarium is to inspire people to care for and protect the ocean planet through conservation, education, and research, and introduces approximately 800,000 guests annually to thousands of animals through structured interpretations, specially curated exhibits, and hands-on interactions. As a leading research organization, Mystic Aquarium employs a staff of scientists engaged in projects focused on the conservation and sustainability of our ocean planet.

Mystic Aquarium supports this nomination because of its extraordinary ecological significance and rich biodiversity. The area is home to a diverse range of marine species and habitats, including the deepest, densest cold-water kelp forest on the eastern seaboard. Protection as a sanctuary would help conserve these vulnerable ecosystems, offer unparalleled scientific research and education opportunities, and enhance climate resilience in a rapidly warming region. The designation aligns with Mystic Aquarium's mission to inspire ocean conservation through education and research.

Located 90 miles off New England's coast in the heart of the Gulf of Maine, Cashes Ledge is an extraordinary undersea mountain range and one of the most unique ecological structures in U.S. ocean waters. Home to myriad, and often vulnerable marine species and habitats, a sanctuary designation in this area would help conserve and protect the extraordinary and vulnerable marine wildlife and habitats of the Cashes Ledge Area, provide unparalleled scientific research and education opportunities, and build climate resilience in a region that is among the fastest warming in the world's oceans.

The Proposed Sanctuary harbors a treasure trove of marine life living among the peaks valleys of the Cashes Ledge, Parker Ridge, and Sigsbee Ridge formations, along with portions of the ecologically inter-connected adjacent deep Cashes and Ammen basins. This area supports a rich biodiversity of habitats and marine life. Cashes Ledge contains all of the bottom types typical of the offshore Gulf of Maine and atop its highest peak, on Ammen Rock, lies the deepest, densest

cold-water kelp forest on the eastern seaboard. Cashes Ledge's diverse habitats ranging from lush kelp to rocky outcroppings and deep muddy basins, provide refuge for a remarkable diversity of marine life, from the Atlantic wolffish and the rare blue sponge to the unusual red cod.

As the Gulf of Maine is overheating, with water temperatures rising faster than 97% of the global ocean, the Proposed Sanctuary's still largely intact benthic habitats and diversity constitute one of the most comprehensive opportunities for biodiversity and climate-stewardship in the Gulf of Maine. The Proposed Sanctuary will celebrate the region's rich natural heritage, create a refuge for vulnerable marine life as well as biodiversity generally, and provide opportunities for research and to enhance understanding of climate change impacts in the Gulf of Maine, as well as numerous education and collaboration opportunities for New Englanders to foster a connection to the Area.

Mystic Aquarium supports the inclusion of a Fully Protected Area within the Proposed Sanctuary to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. Amidst a changing climate that is impacting the Gulf of Maine in ways we are only beginning to understand, the scientific value and ecological importance of fully protecting this Cashes Ledge sub-area as a biodiversity refuge and a living laboratory and oceanographic research platform is vital.

Mystic Aquarium appreciates that the designation of a National Marine Sanctuary is a multi-step public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decision-making and collaboration. The designation of Cashes Ledge as a sanctuary should include a robust process for engagement of the public and stakeholders in the protection of this extraordinary public resource.

From Cashes Ledge's lush kelp to rocky outcroppings and deep muddy basins that provide an underwater oasis teeming with biodiverse marine life, securing long-lasting protections for this unique ocean wonder is vital in our rapidly changing marine environment.

Mystic Aquarium supports this nomination and urges you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

A handwritten signature in dark ink, appearing to read "Susette Tibus". The signature is fluid and cursive, with the first name "Susette" being more prominent than the last name "Tibus".

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

On behalf of our more than three million members and online activists, the Natural Resources Defense Council (NRDC) writes to express its strong support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary. Designating the Cashes Ledge Area as a sanctuary would help preserve and protect a remarkable and rich diversity of habitats and marine life. It also would provide an important opportunity for scientific research and education and would contribute to climate resilience in a region that is among the fastest warming ocean areas in the world.

Located 90 miles off New England's coast in the heart of the Gulf of Maine, the Cashes Ledge Area houses an extraordinary undersea mountain range and all the bottom types typical of offshore Gulf of Maine, ranging from lush kelp forests to rocky outcroppings to deep muddy basins. It provides refuge and vital habitat for a large number and variety of fish species and is a hotspot for species richness and abundance of marine mammals. On the top and flanks of the area's highest peak, Ammen Rock, lies the densest cold-water kelp forest on the eastern seaboard.

The Gulf of Maine is overheating, with water temperatures rising faster than 97% of the global ocean. The Proposed Sanctuary with its still largely intact benthic habitats and rich marine diversity provides a crucial opportunity to research and enhance understanding of climate change impacts on the Gulf of Maine.

NRDC strongly supports the inclusion of a Fully Protected Area within the Proposed Sanctuary that prohibits all extractive and otherwise damaging activities. The proposed 194 sq. mi. fully protected area would encompass the full range of bottom types typical of the greater offshore Gulf of Maine, along with the kelp forests on Ammen Rock and Ammen Rock Pinnacle. Fully protecting this area is vitally important to enhancing the area's resilience in the face of climate change and would provide a living laboratory for research and a better understanding of our marine environment.

For all these reasons, NRDC enthusiastically supports this nomination and urges you to expeditiously add Cashes Ledge to the Sanctuary Inventory List and initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

A handwritten signature in cursive script, reading "Sarah Chasis".

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

Andy Ouimette, Program Chair for Northwest CT Trout Unlimited writes to express support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area. We are one of the oldest chapters of TU, and continue to strive for education and protection of our limited resources, wild spaces, habitats and ecosystems.

Our chapter strives to work together and collaborate on conservation projects, because we are a community. Just the same as our waterways, rivers, lakes and ocean are also connected in many, many ways. In that as good stewards, we are bound by responsibility.

Located 90 miles off New England's coast in the heart of the Gulf of Maine, Cashes Ledge is an extraordinary undersea mountain range and one of the most unique ecological structures in U.S. ocean waters. Home to myriad, and often vulnerable marine species and habitats, a sanctuary designation in this area would help conserve and protect the extraordinary and vulnerable marine wildlife and habitats of the Cashes Ledge Area, provide unparalleled scientific research and education opportunities, and build climate resilience in a region that is among the fastest warming in the world's oceans.

The Proposed Sanctuary harbors a treasure trove of marine life living among the peaks valleys of the Cashes Ledge, Parker Ridge, and Sigsbee Ridge formations, along with portions of the ecologically inter-connected adjacent deep Cashes and Ammen basins. This area supports a rich biodiversity of habitats and marine life. Cashes Ledge contains all of the bottom types typical of the offshore Gulf of Maine and atop its highest peak, on Ammen Rock, lies the deepest, densest cold-water kelp forest on the eastern seaboard. Cashes Ledge's diverse habitats ranging from lush kelp to rocky outcroppings and deep muddy basins, provide refuge for a remarkable diversity of marine life, from the Atlantic wolffish and the rare blue sponge to the unusual red cod.

As the Gulf of Maine is overheating, with water temperatures rising faster than 97% of the global ocean, the Proposed Sanctuary's still largely intact benthic habitats and diversity constitute one of the most comprehensive opportunities for biodiversity and climate-stewardship in the Gulf of Maine. The Proposed Sanctuary will celebrate the region's rich natural heritage, create a refuge for vulnerable marine life as well as biodiversity generally, and provide opportunities for research and to enhance understanding of climate change impacts in the Gulf of Maine, as well as numerous education and collaboration opportunities for New Englander's to foster a connection to the Area.

NWCTU supports the inclusion of a Fully Protected Area within the Proposed Sanctuary to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. Amidst a changing climate that is impacting the Gulf of Maine in ways we are only beginning to understand, the scientific value and ecological importance of fully protecting this Cashes Ledge sub-area as a biodiversity refuge and a living laboratory and oceanographic research platform is vital.

NWCTU appreciates that the designation of a National Marine Sanctuary is a multi-step public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decision-making and collaboration. The designation of Cashes Ledge as a sanctuary should include a robust process for engagement of the public and stakeholders in the protection of this extraordinary public resource.

From Cashes Ledge's lush kelp to rocky outcroppings and deep muddy basins that provide an underwater oasis teeming with biodiverse marine life, securing long-lasting protections for this unique ocean wonder is vital in our rapidly changing marine environment.

NWCTU supports this nomination and urges you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

Andy Ouimette

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

Our Power Our Voice Inc writes to express support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area. O.P.O.V. Inc supports the best interest of the people and the land. We need the earth to be its best so we can be at our best. We are impacted in every way when it comes to our planet and the creatures on it (on land) and in it (in the sea). Every being has its own Divine purpose, O.P.O.V Inc goal is to help bring more awareness to the needs & importance of Cashes Ledge Area to those who doesn't live near these areas yet enjoys the scenery and beauty of. It's more than eyes can see and it's deeper as you go into the sea.

Located 90 miles off New England's coast in the heart of the Gulf of Maine, Cashes Ledge is an extraordinary undersea mountain range and one of the most unique ecological structures in U.S. ocean waters. Home to myriad, and often vulnerable marine species and habitats, a sanctuary designation in this area would help conserve and protect the extraordinary and vulnerable marine wildlife and habitats of the Cashes Ledge Area, provide unparalleled scientific research and education opportunities, and build climate resilience in a region that is among the fastest warming in the world's oceans.

The Proposed Sanctuary harbors a treasure trove of marine life living among the peaks valleys of the Cashes Ledge, Parker Ridge, and Sigsbee Ridge formations, along with portions of the ecologically inter-connected adjacent deep Cashes and Ammen basins. This area supports a rich biodiversity of habitats and marine life. Cashes Ledge contains all of the bottom types typical of the offshore Gulf of Maine and atop its highest peak, on Ammen Rock, lies the deepest, densest cold-water kelp forest on the eastern seaboard. Cashes Ledge's diverse habitats ranging from lush kelp to rocky outcroppings and deep muddy basins, provide refuge for a remarkable diversity of marine life, from the Atlantic wolffish and the rare blue sponge to the unusual red cod.

As the Gulf of Maine is overheating, with water temperatures rising faster than 97% of the global ocean, the Proposed Sanctuary's still largely intact benthic habitats and diversity constitute one of the most comprehensive opportunities for biodiversity and climate-stewardship in the Gulf of Maine. The Proposed Sanctuary will celebrate the region's rich natural heritage, create a refuge for vulnerable marine life as well as biodiversity generally, and provide opportunities for research and to enhance understanding of climate change impacts in the Gulf of Maine, as well as numerous education and collaboration opportunities for New Englander's to foster a

connection to the Area.

Our Power Our Voice Inc supports the inclusion of a Fully Protected Area within the Proposed Sanctuary to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. Amidst a changing climate that is impacting the Gulf of Maine in ways we are only beginning to understand, the scientific value and ecological importance of fully protecting this Cashes Ledge sub-area as a biodiversity refuge and a living laboratory and oceanographic research platform is vital.

Our Power Our Voice Inc appreciates that the designation of a National Marine Sanctuary is a multi-step public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decision-making and collaboration. Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

Please accept Save The Bay's letter of support for the nomination of the proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area. Save The Bay's mission is to protect and improve Narragansett Bay. A healthy, resilient Narragansett Bay depends on a thriving marine ecosystem, protective of vulnerable marine species and habitats. Climate change impacts, fishing pressure, and other stressors are affecting our marine environment at a rapid pace, amplifying the need to protect our most unique and productive ecological resources.

As you know, Cashes Ledge is an extraordinary undersea mountain range and one of the most unique ecological structures in U.S. ocean waters. A sanctuary designation would help conserve and protect the extraordinary and vulnerable marine wildlife and habitats of the Cashes Ledge Area, provide unparalleled scientific research and education opportunities, and build climate resilience in a region that is among the fastest warming in the world's oceans.

Save The Bay supports the inclusion of a Fully Protected Area within the proposed Sanctuary to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. Amidst a changing climate that is impacting the Gulf of Maine in ways we are only beginning to understand, the scientific value and ecological importance of fully protecting this Cashes Ledge sub-area as a biodiversity refuge and a living laboratory and oceanographic research platform is vital. We urge you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

NOAA Office of National Marine Sanctuaries
John Armor
Director, Office of National Marine Sanctuaries
1305 East-West Highway, 11th Floor
Silver Spring, MD 20910
sanctuary.nominations@noaa.gov

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

SEA Education Association (SEA) writes to express support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area. For over 50 years, SEA has educated and inspired oceans scholars, stewards and leaders by fostering and enhancing knowledge about the state of the oceans and coastal communities. SEA programs feature an interdisciplinary curriculum and dynamic leadership-development experience-at sea aboard tall ships and on shore.

Located 90 miles off New England's coast in the heart of the Gulf of Maine, Cashes Ledge is an extraordinary undersea mountain range and one of the most unique ecological structures in U.S. ocean waters. Home to myriad, and often vulnerable marine species and habitats, a sanctuary designation in this area would help conserve and protect the extraordinary and vulnerable marine wildlife and habitats of the Cashes Ledge Area, provide unparalleled scientific research and education opportunities, and build climate resilience in a region that is among the fastest warming in the world's oceans.

The Proposed Sanctuary harbors a treasure trove of marine life living among the peaks valleys of the Cashes Ledge, Parker Ridge, and Sigsbee Ridge formations, along with portions of the ecologically inter-connected adjacent deep Cashes and Ammen basins. This area supports a rich biodiversity of habitats and marine life. Cashes Ledge contains all of the bottom types typical of the offshore Gulf of Maine and atop its highest peak, on Ammen Rock, lies the deepest, densest cold-water kelp forest on the eastern seaboard. Cashes Ledge's diverse habitats ranging from lush kelp to rocky outcroppings and deep muddy basins, provide refuge for a remarkable diversity of marine life, from the Atlantic wolffish and the rare blue sponge to the unusual red cod.

As the Gulf of Maine is overheating, with water temperatures rising faster than 97% of the global ocean, the Proposed Sanctuary's still largely intact benthic habitats and diversity constitute one of the most comprehensive opportunities for biodiversity and climate-stewardship in the Gulf of Maine. The Proposed Sanctuary will celebrate the region's rich natural heritage, create a refuge for vulnerable marine life as well as biodiversity generally, and provide opportunities for research and to enhance understanding of climate change impacts in the Gulf of Maine, as well as numerous education and collaboration opportunities for New Englanders to foster a connection to the Area.

Warming water of the Gulf of Maine is altering ecosystems and impacting fisheries. Global climate change affects the systems oceanographic patterns, marine populations and human communities. To educate about the rapidly changing dynamics of the Gulf of Maine, SEA has launched a new program that specifically addresses the region. In *Climate Change: Gulf of Maine*, students can expect the following:

- Engage in scientific research on the rapid changes and organismal responses in the Gulf of Maine
- Utilize molecular techniques such as DNA sequencing and contribute to long-term datasets quantifying population genomic responses to the changing climate
- Explore coastal communities' responses to climate change in the Gulf of Maine
- Collaborate with partners and stakeholders in the Gulf of Maine community to contribute to the entire pipeline of climate and sustainability research (data collection, analysis, and communication) to policy formation and implementation.

During the program, SEA students participate on a two-week sea component on the Sailing School Vessel, *Corwith Cramer*. While at sea, students have the opportunity to participate in a variety of oceanographic studies in the Gulf of Maine; including, but not limited to, data collection required to monitor the biological, chemical, geological and physical features of the Proposed Marine Sanctuary.

SEA's vision and mission supports the inclusion of a Fully Protected Area within the Proposed Sanctuary to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. Amidst a changing climate that is impacting the Gulf of Maine in ways we are only beginning to understand, the scientific value and ecological importance of fully protecting this Cashes Ledge sub-area as a biodiversity refuge and a living laboratory and oceanographic research platform is vital.

SEA appreciates that the designation of a National Marine Sanctuary is a multi-step public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decision-making and collaboration. The designation of Cashes Ledge as a sanctuary should include a robust process for engagement of the public and stakeholders in the protection of this extraordinary public resource.

From Cashes Ledge's lush kelp to rocky outcroppings and deep muddy basins that provide an underwater oasis teeming with biodiverse marine life, securing long-lasting protections for this unique ocean wonder is vital in our rapidly changing marine environment.

SEA endorses this nomination and urges you to add Cashes Ledge to the Sanctuary Inventory and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

John C. Wigglesworth
President

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

Seacoast Science Center (SSC), Rye, NH writes to express support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary. We believe that the inclusion of Cashes Ledge to the National Marine Sanctuary system is a critical step to protect the incredibly valuable oceanographic and biological resources of the Cashes Ledge Area.

SSC is an environmental education institution/museum that hosts 100,000 visitors and program participants each year from its seaside location at the shore of the Gulf of Maine in Odiorne Point State Park in Rye, NH. SSC recognizes that our Blue Planet is changing at an unprecedented rate. Its health and environmental integrity are threatened by rising temperatures, pollution, and the destruction of natural habitats. Worldwide, out on Cashes Ledge, and right here at home in New Hampshire, we are facing the profound challenges of climate change and habitat degradation. Our Blue Planet is demanding attention. If we are going to keep the earth habitable for generations to come, we must dedicate ourselves to conserving the resources of our fragile planet.

At Seacoast Science Center we believe that science-based education holds the key to inspiring conservation and bringing restorative, positive change to our environment. By experiencing the natural world and understanding our impacts on its delicate systems, everyone can learn to think critically and act pragmatically in ways that will improve the long-term health of our planet.

Seacoast Science Center has already installed a feature aquarium highlighting the biologically diverse, relatively well preserved habitats of Cashes Ledge. We present Cashes Ledge as an area that would receive benefit as a marine protected areas not only for the sake of regional ecological integrity but for the additional benefits to the region's blue economy; specifically to adjacent commercial and recreational fisheries as well as scientific research and tourism. Inclusion of Cashes Ledge as a National Marine Sanctuary would demonstrate a national commitment to marine conservation that would become central messaging in SSC programs and exhibits; consistent with our mission to inspire conservation of our Blue Planet.

Located 90 miles off New England's coast in the heart of the Gulf of Maine, Cashes Ledge is an extraordinary undersea mountain range and one of the most unique ecological structures in U.S. ocean waters. Home to myriad, and often vulnerable marine species and habitats, a sanctuary designation in this area would help conserve and protect the extraordinary and

vulnerable marine wildlife and habitats of the Cashes Ledge Area, provide unparalleled scientific research and education opportunities, and build climate resilience in a region that is among the fastest warming in the world's oceans.

As the Gulf of Maine is heating up, top to bottom, with water temperatures rising faster than 97% of the global ocean, the Proposed Sanctuary's still largely intact benthic habitats and diversity constitute one of the most comprehensive opportunities for biodiversity and climate-stewardship in the Gulf of Maine. The Proposed Sanctuary will celebrate the region's rich natural heritage, create a refuge for vulnerable marine life as well as biodiversity generally, and provide opportunities for research and to enhance understanding of climate change impacts in the Gulf of Maine, as well as numerous education and collaboration opportunities for New Englanders to foster a connection to the Area.

Seacoast Science Center supports the inclusion of a Fully Protected Area within the Proposed Sanctuary to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. Amidst a changing climate that is impacting the Gulf of Maine in ways we are only beginning to understand, the scientific value and ecological importance of fully protecting this Cashes Ledge sub-area as a biodiversity refuge and a living laboratory and oceanographic research platform is vital.

Seacoast Science Center appreciates that the designation of a National Marine Sanctuary is a multi-step public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decision-making and collaboration. The designation of Cashes Ledge as a sanctuary should include a robust process for engagement of the public and stakeholders in the protection of this extraordinary public resource.

From Cashes Ledge's lush kelp to rocky outcroppings and deep muddy basins that provide an underwater oasis teeming with biodiverse marine life, securing long-lasting protections for this unique ocean wonder is vital in our rapidly changing marine environment.

Seacoast Science Center supports this nomination and urges you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

Sincerely,
James E., Chase

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

Sierra Club writes to express support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area. Founded in 1892, Sierra Club is one of our nation's oldest and largest environmental organizations. We work diligently to amplify the power of our 3.8 million members nationwide as we work towards combating climate change and promoting a just and sustainable economy.

Sierra Club is committed to protecting our marine ecosystems and preserving our coastal resources for generations to come. Keeping our waters clean, preventing irresponsible industrial development, and advocating for responsible stewardship of our coastal resources all contribute to the Sierra Club's vision for the ambitious protection of our lands and waters. The consideration of Cashes Ledge as a National Marine Sanctuary is also in alignment with past efforts to protect Cashes Ledge that the Sierra Club has supported.

Located 90 miles off New England's coast in the heart of the Gulf of Maine, Cashes Ledge is an extraordinary undersea mountain range and one of the most unique ecological structures in U.S. ocean waters. Home to myriad, and often vulnerable marine species and habitats, a sanctuary designation in this area would help conserve and protect the extraordinary and vulnerable marine wildlife and habitats of the Cashes Ledge Area, provide unparalleled scientific research and education opportunities, and build climate resilience in a region that is among the fastest warming in the world's oceans.

The Proposed Sanctuary harbors a treasure trove of marine life living among the peaks valleys of the Cashes Ledge, Parker Ridge, and Sigsbee Ridge formations, along with portions of the ecologically inter-connected adjacent deep Cashes and Ammen basins. This area supports a rich biodiversity of habitats and marine life. Cashes Ledge contains all of the bottom types typical of the offshore Gulf of Maine and atop its highest peak, on Ammen Rock, lies the deepest, densest cold-water kelp forest on the eastern seaboard. Cashes Ledge's diverse habitats ranging from lush kelp to rocky outcroppings and deep muddy basins, provide refuge for a remarkable diversity of marine life, from the Atlantic wolffish and the rare blue sponge to the unusual red cod.

As the Gulf of Maine is overheating, with water temperatures rising faster than 97% of the global ocean, the Proposed Sanctuary's still largely intact benthic habitats and diversity constitute one of the most comprehensive opportunities for biodiversity and climate-stewardship in the Gulf of Maine. The Proposed Sanctuary will celebrate the region's rich natural heritage, create a refuge

for vulnerable marine life as well as biodiversity generally, and provide opportunities for research and to enhance understanding of climate change impacts in the Gulf of Maine, as well as numerous education and collaboration opportunities for New Englanders to foster a connection to the Area.

Sierra Club supports the inclusion of a Fully Protected Area within the Proposed Sanctuary to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. The proposal should not preclude future development of responsibly sited, equitably developed offshore wind power within or adjacent to the protected area. Amidst a changing climate that is impacting the Gulf of Maine in ways we are only beginning to understand, the scientific value and ecological importance of fully protecting this Cashes Ledge sub-area as a biodiversity refuge and a living laboratory and oceanographic research platform is vital.

Sierra Club appreciates that the designation of a National Marine Sanctuary is a multi-step public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decision-making and collaboration. The designation of Cashes Ledge as a sanctuary should include a robust process for engagement of the public and stakeholders in the protection of this extraordinary public resource.

From Cashes Ledge's lush kelp to rocky outcroppings and deep muddy basins that provide an underwater oasis teeming with biodiverse marine life, securing long-lasting protections for this unique ocean wonder is vital in our rapidly changing marine environment.

Sierra Club supports this nomination and urges you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

Pete Nichols, Chapter Director, Sierra Club Maine

Catherine Corkery, Chapter Director, Sierra Club New Hampshire

Vickash Mohanka, Chapter Director, Sierra Club Massachusetts

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

St. Paul's Episcopal Church in Lynnfield, MA writes to express support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area. St. Paul's is a suburban church in the Greater Boston area with a long history of what we call *Creation Care*, which is the Church's effort to take reverent care of God's gift of this magnificent planet earth, our island home.

We have a "Young Adult" ministry made up of people in their twenties who are currently leading our parish in *Creation Care* efforts as they seek to take better care of our planet than we have. In fact, they are currently going through the scuba training and certification process together so that they can join me - a former U.S. Navy Deep Sea Diver and an avid recreational and technical diver - in diving with marine biologists from around the area to see and learn about the wonders that lie beneath the surface of our oceans.

Located 90 miles off New England's coast in the heart of the Gulf of Maine, Cashes Ledge is an extraordinary undersea mountain range and one of the most unique ecological structures in U.S. ocean waters. Home to myriad, and often vulnerable marine species and habitats, a sanctuary designation in this area would help conserve and protect the extraordinary and vulnerable marine wildlife and habitats of the Cashes Ledge Area, provide unparalleled scientific research and education opportunities, and build climate resilience in a region that is among the fastest warming in the world's oceans.

The Proposed Sanctuary harbors a treasure trove of marine life living among the peaks valleys of the Cashes Ledge, Parker Ridge, and Sigsbee Ridge formations, along with portions of the ecologically inter-connected adjacent deep Cashes and Ammen basins. This area supports a rich biodiversity of habitats and marine life. Cashes Ledge contains all of the bottom types typical of the offshore Gulf of Maine and atop its highest peak, on Ammen Rock, lies the deepest, densest cold-water kelp forest on the eastern seaboard. Cashes Ledge's diverse habitats ranging from lush kelp to rocky outcroppings and deep muddy basins, provide refuge for a remarkable diversity of marine life, from the Atlantic wolffish and the rare blue sponge to the unusual red cod.

As the Gulf of Maine is overheating, with water temperatures rising faster than 97% of the global ocean, the Proposed Sanctuary's still largely intact benthic habitats and diversity constitute one of the most comprehensive opportunities for biodiversity and climate-stewardship in the Gulf of Maine. The Proposed Sanctuary will celebrate the region's rich natural heritage, create a refuge for vulnerable marine life as well

as biodiversity generally, and provide opportunities for research and to enhance understanding of climate change impacts in the Gulf of Maine, as well as numerous education and collaboration opportunities for New Englander's to foster a connection to the Area.

St. Paul's supports the inclusion of a Fully Protected Area within the Proposed Sanctuary to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. Amidst a changing climate that is impacting the Gulf of Maine in ways we are only beginning to understand, the scientific value and ecological importance of fully protecting this Cashes Ledge sub-area as a biodiversity refuge and a living laboratory and oceanographic research platform is vital.

St. Paul's appreciates that the designation of a National Marine Sanctuary is a multi-step public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decision-making and collaboration. The designation of Cashes Ledge as a sanctuary should include a robust process for engagement of the public and stakeholders in the protection of this extraordinary public resource.

From Cashes Ledge's lush kelp to rocky outcroppings and deep muddy basins that provide an underwater oasis teeming with biodiverse marine life, securing long-lasting protections for this unique ocean wonder is vital in our rapidly changing marine environment.

St. Paul's supports this nomination and urges you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

The Rev. Robert Bacon, Rector

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

The Surfrider Foundation writes to express support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area. The Surfrider Foundation's mission is to protect our nation's ocean, waves and beaches through a powerful activist network. At Surfrider, we believe ocean protection and defending our ocean from external challenges that threaten its ecosystem is vital to our goals.

Our ocean faces growing challenges from pollution, habitat loss, development, fishing and climate change. This is why Surfrider takes a proactive approach to conservation, and strives to establish and support Marine Protected Areas and National Marine Sanctuaries across the U.S. National Marine Sanctuaries are instrumental for protecting our country's most outstanding ocean areas. As a community of coastal recreation users, our members experience firsthand the effects of poor management of our ocean and coastal resources. For this reason, we fight for water quality, beaches and marine environment protection so all people can continue to enjoy and recreate in healthy ocean ecosystems.

Located 90 miles off New England's coast in the heart of the Gulf of Maine, Cashes Ledge is an extraordinary undersea mountain range and one of the most unique ecological structures in U.S. ocean waters. Home to myriad, and often vulnerable marine species and habitats, a sanctuary designation in this area would help conserve and protect the extraordinary and vulnerable marine wildlife and habitats of the Cashes Ledge Area, provide unparalleled scientific research and education opportunities, and build climate resilience in a region that is among the fastest warming in the world's oceans.

The Proposed Sanctuary harbors a treasure trove of marine life living among the peaks valleys of the Cashes Ledge, Parker Ridge, and Sigsbee Ridge formations, along with portions of the ecologically inter-connected adjacent deep Cashes and Ammen basins. This area supports a rich biodiversity of habitats and marine life. Cashes Ledge contains all of the bottom types typical of the offshore Gulf of Maine and atop its highest peak, on Ammen Rock, lies the deepest, densest cold-water kelp forest on the eastern seaboard. Cashes Ledge's diverse habitats ranging from lush kelp to rocky outcroppings and deep muddy basins, provide refuge for a remarkable diversity of marine life, from the Atlantic wolffish and the rare blue sponge to the unusual red cod.

As the Gulf of Maine is overheating, with water temperatures rising faster than 97% of the global

ocean, the Proposed Sanctuary's still largely intact benthic habitats and diversity constitute one of the most comprehensive opportunities for biodiversity and climate-stewardship in the Gulf of Maine. The Proposed Sanctuary will celebrate the region's rich natural heritage, create a refuge for vulnerable marine life as well as biodiversity generally, and provide opportunities for research and to enhance understanding of climate change impacts in the Gulf of Maine, as well as numerous education and collaboration opportunities for New Englanders to foster a connection to the Area.

Surfrider Foundation supports the inclusion of a Fully Protected Area within the Proposed Sanctuary to safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. Amidst a changing climate that is impacting the Gulf of Maine in ways we are only beginning to understand, the scientific value and ecological importance of fully protecting this Cashes Ledge sub-area as a biodiversity refuge and a living laboratory and oceanographic research platform is vital.

Surfrider Foundation appreciates that the designation of a National Marine Sanctuary is a multi-step public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decision-making and collaboration. The designation of Cashes Ledge as a sanctuary should include a robust process for engagement of the public and stakeholders in the protection of this extraordinary public resource.

From Cashes Ledge's lush kelp to rocky outcroppings and deep muddy basins that provide an underwater oasis teeming with biodiverse marine life, securing long-lasting protections for this unique ocean wonder is vital in our rapidly changing marine environment.

Surfrider Foundation supports this nomination and urges you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

Isabella DeFrancesco

Northeast Regional Manager

Surfrider Foundation

Re: Support for Nomination of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

The Nature Conservancy (the Conservancy) is pleased to support the nomination of a new National Marine Sanctuary on Cashes Ledge. The Conservancy's mission is to conserve the lands and waters on which all life depends. With the support of more than one million members globally, the Conservancy operates marine conservation projects around the world, has protected 125 million acres of land, and restored over 5,000 river miles. We work in 77 countries, all 50 of the United States, and in the U.S. territories. The Conservancy has been working in New England and across the globe to conserve, protect, and restore ocean, coastal, and Great Lakes habitats and species for over four decades. We use a science-based and pragmatic approach to work collaboratively with people, like farmers and fishermen who depend upon healthy lands and waters, to find solutions that improve outcomes for both people and nature. We conduct this work in partnership with many NOAA programs including by serving on and chairing Sanctuary Advisory Councils.

Scientists estimate we have lost between one-third and one-half of global vulnerable marine habitats. Now is the time to scale up efforts - both worldwide and domestic - to build resilience to climate change and halt the loss of biodiversity. Consequently, the Conservancy commends the Biden Administration for its ambitious vision to "develop and pursue a locally led, nationally scaled effort to conserve, connect, and restore the lands, waters, and wildlife upon which we all depend" in its Conserving and Restoring America the Beautiful¹ report.

Cashes Ledge contains unique biological, geologic, and oceanographic conditions that warrant sanctuary nomination. Cashes Ledge is a submarine mountain chain located in the central Gulf of Maine and its peak (Ammen Rock) rises to within 40 feet of the ocean surface. This topographic feature in the middle of the Gulf of Maine creates a unique environment where nutrient rich waters from adjacent deep-water basins rise up into the photic zone. The result is a diverse habitat area with a relatively intact ecosystem including high densities of phytoplankton, lush kelp forests, a diverse marine invertebrate community, and an assemblage of predatory fish, marine mammals, and seabirds. Habitats within the proposed Cashes Ledge have been designated Essential Fish Habitat for over 40 species and life stages of fish,² a Habitat Area of

¹ <https://www.doi.gov/sites/default/files/report-conserving-and-restoring-america-the-beautiful-2021.pdf>

² <https://www.habitat.noaa.gov/apps/efhmapper>

Particular Concern,³ and the New England Fisheries Management Council has maintained year round closures for commercial groundfishing there for decades.

Cashes Ledge supports the most abundant deeper water seaweed communities in the Northwest Atlantic.⁴ Upwelling and internal waves deliver fish and invertebrate larvae to these pinnacles where settlement occurs. The combination of sunlight and nutrient-rich waters fuels the growth of these larvae creating a productive area that supports abundant populations of large predatory fish including cod, pollock, wolffish, and sharks. Cashes has also been identified as an area believed to contain deep-water corals. The unique oceanographic characteristics and habitat area found in the Cashes Ledge area satisfy many of the Sanctuary designation criteria including high biological productivity, enhancement of critical habitat, and representative biogeographic assemblages.

Cashes Ledge's central location in the Gulf of Maine, one of the most rapidly warming parts of the global ocean, is an important piece of its value as a Sanctuary. Cashes is an important refuge area for fish (and other species) sensitive to the effects of climate change. The Conservancy's marine mapping tool⁵ shows that compared to the rest of the Gulf of Maine that the proposed sanctuary area is highly important (more than two standard deviations above the mean) for fish species determined to be vulnerable to climate change, ESA listed marine mammals, and coastal bird conservation priority species, among others.

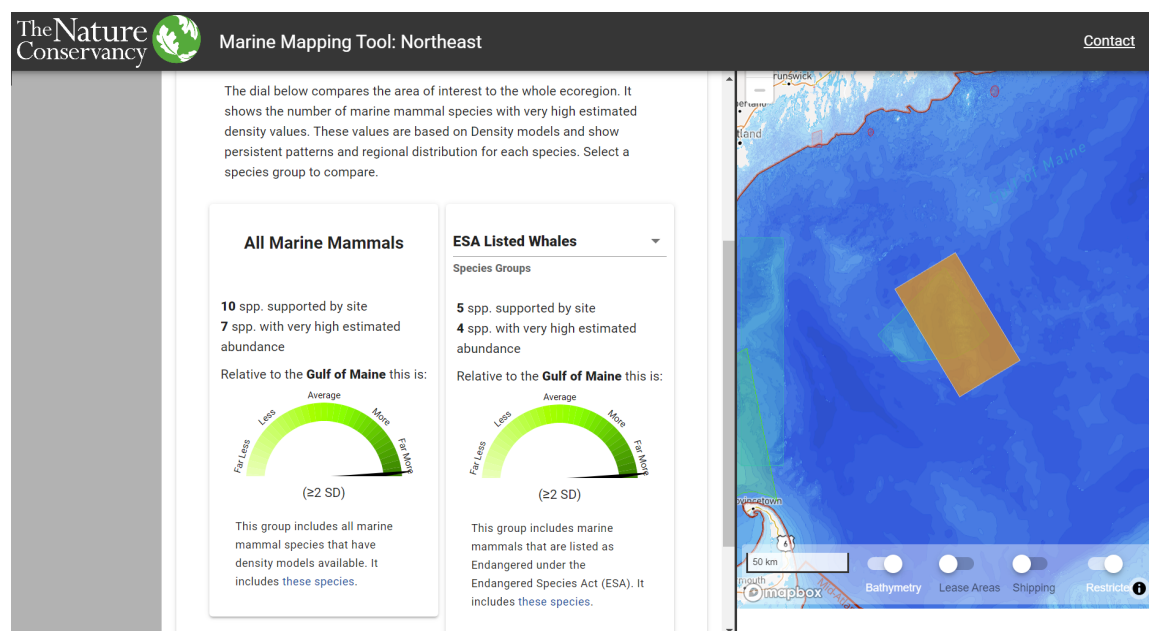

Figure 1: Dashboard for marine mammals in proposed Cashes Ledge sanctuary area shown on the Nature Conservancy's Marine Mapping Tool.

³ Omnibus Habitat Amendment 2 <https://www.federalregister.gov/documents/2018/04/09/2018-06760/magnuson-stevens-fishery-conservation-and-management-act-provisions-fisheries-of-the-northeastern>

⁴ [Persistent differences between coastal and offshore kelp forest communities in a warming Gulf of Maine \(plos.org\)](https://doi.org/10.1371/journal.plos.org)

⁵ <https://www.maps.tnc.org/marinemap/>

The Conservancy engages closely in the management of our nation's fisheries with staff serving as fishery management council members, advisory panel members and chairs, and technical team members across the US, including in New England. We support the ongoing collaborative management of fisheries with the New England Fisheries Management Council in the larger Sanctuary boundaries, consistent with current Office of National Marine Sanctuaries program regulations,⁶ and have seen first-hand the success of that approach at nearby Stellwagen Bank National Marine Sanctuary. At the same time we also support the consideration of a fully protected area for a portion of the proposed sanctuary to create a biodiversity refuge and living laboratory for research and education.

In summary, The Nature Conservancy supports the nomination of Cashes Ledge as a new National Marine Sanctuary and urges you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

We recognize that sanctuary designation is a multi-step, transparent, inclusive, and participatory planning process. Such a process would generate positive action and improve buy-in from key stakeholders, while also providing the greatest benefit for people who live near, use, visit, depend on, and value the Sanctuary and its waters. As this effort proceeds, The Nature Conservancy looks forward to working closely with NOAA and other ocean champions to help make it a success.

Sincerely,

Christopher McGuire
Director, Ocean Program in Massachusetts
Interim Northeast Division Ocean Strategy Lead

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

The Ocean Project strongly supports the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area.

As you know, The Ocean Project has been involved in supporting and promoting national marine sanctuaries and other marine protected areas for nearly 27 years. We've focused most of that time on generating involvement and support for sanctuaries at zoos, aquariums, and museums (ZAMs). Several years ago, we rallied over 200 from all 50 states to sign a letter of support to the Administration for 30x30 and America the Beautiful. As part of that campaign, we also worked closely with the Association of Zoos and Aquariums, the Association of Science-Tech Centers, and the American Association of Museums. It was the first time those three associations had collaborated for conservation, and a significant turning point for ZAMs, overall, and their role as conservation leaders in their communities and nationally.

Since 2009, based on our comprehensive market research that we conducted with support from NOAA Education for nearly a decade, we have intentionally focused more each year on supporting youth leadership and advocacy. Two years ago, we made an organizational pivot to center youth in all we do, including global coordination of World Ocean Day. We support, empower, and mobilize youth from diverse backgrounds to become ocean champions.

Over the years we have proactively engaged with many other youth-focused organizations to celebrate diversity and prioritize collaboration to advance ocean conservation, and especially focusing on issues and opportunities with marine protected areas, underwater parks, and marine sanctuaries, in particular. Additionally, we have pushed for nearly three decades with our national network to generate support for stronger budgets for NOAA, including especially around education, sanctuaries, and fisheries.

As we focus on youth engagement we have found that informing them about underwater parks and sanctuaries helps young people get excited about protecting the ocean overall. The great

diversity of plant and animal life inspires youth, and we look forward to generating lots of youth involvement around the sanctuary process.

We believe that Cashes Ledge is a very special place within U.S. ocean waters and deserves strong protection. As there are not many marine protected areas in the Northeast part of the U.S., this site would help protect some of those diverse habitats. A sanctuary designation for Cashes would help protect the extraordinary and vulnerable marine wildlife and habitats of the area, enhance further scientific research, provide a wealth of educational opportunities for youth and others of all ages. Moreover, its protection would help in building climate resilience in a region that is among the fastest warming in the world's one big, interconnected ocean.

The Ocean Project also supports the inclusion of a Fully Protected Area within the proposed sanctuary to best safeguard biodiversity, the kelp forest, and adjacent, interconnected habitats. The Gulf of Maine is changing rapidly due to climate change and we don't nearly understand the implications so strongly urge that there be a Cashes Ledge sub-area that is highly protected as a biodiversity refuge and a living laboratory.

We look forward to generating much public awareness in this site and involving hundreds of youth as key stakeholders in the protection of this extraordinary area. From California and Corpus Christi to Cape Cod, and from Downeast Maine to Detroit Michigan and to the deserts of Arizona, we will generate youth involvement to protect and conserve key places in the ocean, our nation's greatest public resource.

The Ocean Project is excited to work closely with you to support this nomination and we urge you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary as soon as possible.

Best regards,
Bill Mott

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

Whale and Dolphin Conservation, WDC, is writing to express conditional support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area. WDC is an international conservation, rescue, and research organization dedicated to the protection of whales and dolphins. Our North American office is incorporated as a 501c3 and based in Massachusetts. Over the years, members of our staff have explicitly traveled to Cashes Ledge to document whales and dolphins, including sightings of endangered blue and fin whales as well as humpback whales.

As noted by the petitioners, Cashes Ledge is located ~ 80 miles off the coast of Massachusetts and represents one of the most unique ecological structures in U.S. Ocean waters. Home to numerous endangered and protected species of marine mammals, the areas designation as a national marine sanctuary can provide an opportunity to protect both species and habitats and conduct important research in a changing climate, recognizing that the Gulf of Maine is among the fastest warming bodies of ocean water in the world.

WDC supports the inclusion of a Fully Protected Area within the Proposed Sanctuary to safeguard biodiversity including the marine mammals who forage and socialize and rest in this and its adjacent, interconnected habitats.

WDC's conditional support for this designation rests upon decisions that determine how resources will be allocated to the monitoring and enforcement of protections for this habitat versus infrastructure, staffing, and public outreach. We do not dismiss that outreach is important, but we are not supportive of funds allocated to create an infrastructure that would require designated facility, administrative expenses and fully staffed sanctuary roles. Instead, we urge NOAA to consider prioritizing costs associated with the designation for monitoring and enforcement.

WDC appreciates that the designation of a National Marine Sanctuary is a multi-step public process that provides multiple opportunities for stakeholder engagement at each phase to ensure community-based decision-making and collaboration. The designation of Cashes Ledge as a sanctuary should include a robust process for engagement of the public and stakeholders in the protection of this extraordinary public resource.

Sincerely,

Regina Asmutis-Silva
WDC-NA Executive Director

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

My name is Anita Gram and I am writing in support of the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area.

I live in Reading Massachusetts. Originally from the Midwest, I did not see the ocean until I was 12. You can only imagine what a thrill it was to experience the power of the ocean for the first time! Now an avid snorkeler, I have come to appreciate the subtle balance of life in our oceans. I am passionate about saving our oceans for future generations. In addition, my Christian faith teaches me that It is my responsibility to care for land, seas, and all creatures.

I recently learned about the incredible biodiversity of the Cashes Ledge Area. I heartily support making it a National Marine Sanctuary! It's only 90 miles off the coast and it supports an incredible mix of plant and animal life within its diverse habitats. It is essential to protect ocean diversity during this period of advancing climate change. (As you may know, the Gulf of Maine is warming faster than 97% of the world's oceans.) In addition, our coastal communities in New England depend on healthy oceans to support our livelihoods.

I am strongly in favor of the nomination of Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary. It is a matter of urgency and our children's future.
Thank you.

Sincerely,

Anita Gram

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

My name is Cheryl Duckworth and I am writing in support of the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area.

I currently live in Lynnfield, MA, but spent several years living in southeast Asia where I had the opportunity to see the beautiful ocean habitats while scuba diving, gaining an appreciation for how important these habitats are to the health of the earth and future generations. However, I also witnessed much of the destruction through floating plastic and trash as well as the bleaching of the coral through global warming. Now, back closer in my north east home, I recognize that each marine habitat that is currently healthy, needs to be protected, especially given the acceleration of warming in the oceans.

- Ocean conservation is personally important to me because of the destruction I have witnessed.
- I want to protect our ocean for present and future generations.
- New England and its coastal communities depend on a healthy thriving ocean ecosystem for tourism and commercial and recreational fishing to ecosystem services.

I support the nomination of the Cashes Ledge Area as a National Marine Sanctuary.

- The “Cashes Ledge Area” harbors a treasure trove of marine life living among its peaks and valleys
- The diverse habitats of Cashes Ledge, ranging from lush kelp to rocky outcroppings to deep muddy basins, provide refuge for an astounding diversity of marine life, from the Atlantic wolf-fish to the rare blue sponge to the unusual red cod.
- As climate impacts in the Gulf of Maine continue to increase, the scientific value and ecological importance of protecting Cashes Ledge as a living laboratory and oceanographic research platform only increases.

Securing long-lasting protections for this unique New England habitat is essential in our rapidly changing marine environment. I support this nomination and urge you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,
Cheryl Duckworth
Lynnfield, MA

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

My name is Erica Bartlett, and I'm writing to support the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area.

I live in Portland, Maine, and I've always enjoyed visiting Maine's coastal waters. Walking on the beach or the rocky coasts, while looking out at the ocean, is such a calming, restorative experience, and it can also be awe-inspiring to see crashing waves or think about all the life in those waters. I want to protect our ocean so present and future generations can continue to have the types of experiences I have by the water.

I support the nomination of the Cashes Ledge Area as a National Marine Sanctuary because I know the Gulf of Maine is overheating, with water temperatures rising faster than 97% of the global ocean. As climate impacts in the Gulf continue to increase, the scientific value and ecological importance of protecting Cashes Ledge as a living laboratory and oceanographic research platform becomes even more important.

Putting long-lasting protections around this unique New England habitat is essential in our rapidly changing marine environment. I support this nomination and urge you to add Cashes Ledge to the Sanctuary Inventory List, as well as to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,
Erica L. Bartlett
Portland, Maine

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

My name is Greg, and I am writing in support of the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area.

I live in Holliston, MA and to me, the ocean is an important part of my life and our culture in New England.

- When I visit the Gulf of Maine Coast, I swim, snorkel, SCUBA dive and kayak.
- Ocean conservation is personally important to me because it brings me great pleasure and peace of mind and provides sustenance for our community.
- I want to protect our ocean for present and future generations because we need it for our survival.
- An enduringly healthy, clean, safe ocean matters to me because without our oceans the quality of our lives and communities will be significantly diminished.

I support the nomination of the Cashes Ledge Area as a National Marine Sanctuary because we need to provide preserves for our marine species to allow them to thrive in our changing world.

Securing long-lasting protections for this unique New England habitat is essential in our rapidly changing marine environment. I support this nomination and urge you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

My name is Jenna Valente. I am a resident of Cumberland, Maine, and I am writing in support of the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area.

When we all reflect on our lives, we tend to find defining themes that weave throughout, eventually filling out a much larger tapestry. As I reflect on my life, it is increasingly clear to me that the ocean lives at the front and center of it all. I am a descendent of generations of ocean stewards, from fishers, game wardens, Coast Guardsmen, to ship chandlers, policy makers and beyond. My drive to protect the planet is in my blood. It is my life's purpose. It is what drives me, so much so that for the past 15 years I've been working in some capacity to ensure we have a safe, healthy, resilient environment to live in. That is almost half of my life. I've worked on organic farms and national wildlife refuges and served on teams that conducted research and drafted policy for estuaries in the United States.

Now, I serve as the Director of Advocacy for the Healthy Ocean Coalition, which is a community of nearly 300 grassroots advocates and frontline leaders from every corner of the country working together to inform and advance federal ocean and climate policy. Our coalition exists to remove barriers that keep people from becoming ocean advocates. One of the pillars of our work is protecting important ocean places, so you can imagine my excitement and passion around the opportunity to help ensure the ocean space that is most near and dear to my heart, home, and family's history is strongly protected and responsibly managed in perpetuity.

In addition to my deep, personal connection to the place, I support the nomination of the Cashes Ledge Area as a National Marine Sanctuary because the Cashes Ledge Area provides a glimpse in time to an undisturbed Gulf of Maine, prior to the influences of human activity. Maine's lost world has persisted relatively intact, however increased human ocean uses encroach on this wilderness vestige. Just as I am intrinsically connected to the ocean, so is New England.

Our coastal communities depend on a healthy thriving ocean ecosystem for tourism and commercial and recreational fishing to ecosystem services. The Proposed Sanctuary will

provide opportunities for research and enhance the understanding of climate change impacts in the Gulf of Maine, as well as numerous opportunities to access nature with a broader lens by creating physical and virtual engagement and collaboration opportunities for communities that would foster understanding of marine habitats, deepening their connection with nature in New England's own backyard. The sanctuary would have many benefits including addressing the interrelated goals of conserving the rich biodiversity of the Gulf of Maine and building resilience of the Gulf of Maine to the impacts of climate change. This is particularly important in the Gulf of Maine which is warming faster than 97% of the rest of the world's ocean.

Securing long-lasting protections for this unique New England habitat is essential in our rapidly changing marine environment. I support this nomination and urge you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,
Jenna Valente
Cumberland, Maine

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

My name is Karen Talentino and I am writing in support of the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area.

I live in South Portland, Maine, and to me, the ocean is the most critical of our environments on earth. As a biologist and environmental scientist, I am well aware of the role of the ocean in providing us with food, serving as a carbon and heat storage sink, influencing weather, and providing a vital transportation link for the world. When I visit the Gulf of Maine coast, I walk, kayak, swim and just enjoy the beauty and the fresh smell of the ocean. Ocean conservation is personally important to me because we have devastated so much of the ocean habitat already (I am particularly interested in coral reefs, for example) that we simply **must** take every opportunity to preserve the remaining areas, particularly those that are so full of life as Cashes Ledge. If we allow such a rich, biodiverse and healthy area to be accessible for fishing and other invasive activities, we continue to reduce the capacity of the ocean to recover from the damage we have already done.

I support the nomination of the Cashes Ledge Area as a National Marine Sanctuary.

Securing long-lasting protection for this unique New England habitat is essential in our rapidly changing marine environment. I support this nomination and urge you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

Karen Talentino, Ph.D.

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

My name is Laura Rumpf and I am writing in support of the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area.

I live in South Portland and to me, the ocean is life itself; sustaining not only humans in their livelihood and recreation, but also for mental health. When I visit the Gulf of Maine Coast, I swim, walk on the beach, kayak, act as a Citizen Scientist, helping to collect data for institutions such as Friends of Casco Bay, the Gulf of ME Research Institute, etc.

Ocean conservation is personally important to me because I have lived all over the world and seen the devastation that unfettered exploitation reeks on the health of the environment and on humans. I want to protect our ocean for present and future generations because if we give it a chance, the resilience and intelligence of nature's balance can also help solve many human-caused problems.

I support the nomination of the Cashes Ledge Area as a National Marine Sanctuary because as climate impacts in the Gulf of Maine continue to increase, the scientific value and ecological importance of protecting Cashes Ledge as a living laboratory and oceanographic research platform only increases.

The Proposed Sanctuary will provide opportunities for research and to enhance the understanding of climate change impacts in the Gulf of Maine, as well as numerous opportunities to access nature with a broader lens by creating physical and virtual engagement and collaboration opportunities for communities that would foster understanding of marine habitats, deepening their connection with nature in New England's own backyard.

Securing long-lasting protections for this unique New England habitat is essential in our rapidly changing marine environment. I support this nomination and urge you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Priscilla Dreyman [REDACTED]

Thu, Jul 18, 2024 at 1:49 PM

To: [REDACTED]

To Whom It May Concern:

I am a resident of South Portland, Maine, a city located on Casco Bay, where water temperatures are increasing at one of the fastest rates (97%) in the entire world. I am a retired United Methodist minister and certified United Methodist Earthkeeper focused on climate protection, restoration, and resilience. The city of South Portland is about 100 miles from Cashes Ledge. Casco Bay and the Gulf of Maine are directly impacted by what happens to the Cashes Ledge ocean environment.

I am writing in support of the application by the Conservation Law Foundation to nominate/designate Cashes Ledge, located in the Gulf of Maine, as a National Marine Sanctuary. This is an opportunity to preserve a priceless ecosystem, rich in its unparalleled biodiversity -- considered a "biological hotspot " by scientists -- and its huge carbon sequestering kelp forest. Preserving this 32-mile underwater mountain range is critical to the future of the Gulf of Maine as well as to efforts to slow climate warming of both our atmosphere and the ocean.

Thank you for your major efforts to make Cashes Ledge a National Marine Sanctuary!

Sincerely,
The Reverend Priscilla Dreyman

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor:

My name is Priscilla March and I am writing in support of the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area.

I live in North Reading, Massachusetts and, to me, the ocean is one of the last remaining natural mysteries in our existence. When I am on the coast of the Atlantic, or sailing on its surface, the immensity of the ocean fills me with awe and wonder. My husband and I also have a camp on the coast where we witness the daily changing and movement of our spectacular tides, and the migration of countless thousands of seabirds. Ocean conservation is important to me because of the treasure-trove of animal and plant life that depends on the ocean's ability to sustain it. As we know, ocean animals and plants don't live in a vacuum – all of life is connected – so conserving the oceans means conserving everything on our planet. As Arthur C. Clarke said, "How inappropriate to call this planet Earth, when it's quite clearly Ocean."

I support the nomination of the Cashes Ledge Area as a National Marine Sanctuary. The Gulf of Maine is overheating, with water temperatures rising faster than 97% of the global ocean. The largely intact benthic habitats and diversity of Cashes Ledge constitute one of the most comprehensive opportunities for biodiversity and climate-stewardship in the Gulf of Maine. The sanctuary would have many benefits including addressing the interrelated goals of conserving the rich biodiversity of the Gulf of Maine and building resilience of the Gulf of Maine to the impacts of climate change.

Securing long-lasting protections for this unique New England habitat is essential in our rapidly changing marine environment. I support this nomination and urge you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,

Priscilla March
North Reading, MA

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

My name is Sarah Winter Whelan, and I am a long-time resident of New England as well as Executive Director of the Healthy Ocean Coalition. I am writing to you today to strongly support of the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the vibrant, critically important Cashes Ledge Area.

I live within five miles of the ocean in Boston, Massachusetts. To my family and our community in this urban coastal city, the ocean is a vital ecosystem that provides us with happiness, food, and economic support. The ocean is also overheating, particularly in the Gulf of Maine where water temperatures are rising faster than 97% of the global ocean. One strategy to help combat the increasing climate impacts and biodiversity loss in New England is protecting important habitats.

Cashes Ledge Area is one of those places. This relatively small expanse of ocean supports a remarkable and rich diversity of habitats and marine life. The diverse habitats of Cashes Ledge, ranging from lush kelp to rocky outcroppings to deep muddy basins, provide refuge for an astounding diversity of marine life, from the Atlantic wolf-fish to the rare blue sponge to the unusual red cod. It truly is an incredibly place that constitutes one of the most comprehensive opportunities for biodiversity and climate-stewardship in the Gulf of Maine. We need to secure long-lasting protections for this unique New England ecosystem.

This month the United States celebrates its 248th birthday. In the spirit of celebrating the United States, a place that I want to have healthy ocean ecosystems for another 248 years, I write today to support the nomination of the Cashes Ledge Area as a National Marine Sanctuary. **I urge you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary as soon as possible.**

Thank you for your consideration.

Sincerely,

Sarah Winter Whelan
Boston, Massachusetts

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

My name is Sofia Bacon and I am writing in support of the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area.

I live in Lexington, Massachusetts, and I have been lucky enough to spend my whole life around the ocean. Twenty seven out of the twenty eight years of my life my family has gone camping on an island off the coast of Deer Isle, Maine. It has always been and will always be the highlight of my year. Just in that one small area of the Gulf of Maine Coast, the differences have been extremely apparent. There has been a noticeable rise in water temperature. Each year it seems that the water is a little bit warmer. It used to be excruciating to stay in the water for more than a dip. We would emerge from the water gasping to catch our breath. That is no longer the case. If I can feel the change in temperature, it is clearly a big enough change to be more than detrimental to the countless species that call those waters home. One of which is the Mussels that used to crowd the shores. There is a large sandbar that emerges with each low tide, and when I was young there was a plethora of Mussels. Due to the rising temperature of the waters, the Green Crab has been able to move into the area. These crabs, an invasive species, have demolished the population of native Mussels. Now, there is not a single Mussel to be collected. We have been shocked by the change. This is just one example of the impact of humans and climate change on the natural world.

I move that Cashes Ledge become a National Marine Sanctuary so that we can start to slow the impact of humans and climate change. The Gulf of Maine Coast is an immense area, full of a wide variety of marine life. This area deserves to be preserved so that it can remain the diverse habitat that it is. The ridges, the basins, the kelp forests, the rare Blue Sponge - all of these and more need our help. Just because they are under water and largely out of sight does not mean we should let them wither. I implore you to add Cashes Ledge to the Sanctuary Inventory List and to initiate its designation as a National Marine Sanctuary so that we can take responsibility for the damage that we have done and begin to do what we can to help our environment. Thank you for your time and attention.

Sincerely,
Sofia Bacon

Re: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

My name is Susan Santangelo and I am writing in support of the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area.

I live on Hills Beach in Biddeford, Maine, and to me the ocean is a sacred space that keeps me centered, calm, and in awe. I derive great strength and equanimity from it. I feel so fortunate to live right at its edge where it is the last thing I see and hear before going to sleep and the first thing I see and hear in the morning, where I can listen to the waves whenever the tide is in and where I see and hear so many wonderful shore birds and marine mammals. Ocean conservation is personally important to me because I know the ocean, like the rest of Mother Earth, is so vulnerable and threatened now.

As an epidemiologist and the Director of the Center for Clinical and Translational Science at the Maine Health Institute for Research, I feel it is vitally important to protect our ocean for present and future generations because the ocean's health is a barometer of the health of the rest of our only earthly home and because the ocean is such a source of great beauty and inspiration and life for so many creatures.

I support the nomination of the Cashes Ledge Area as a National Marine Sanctuary because it harbors such a treasure trove of marine life living among Cashes Ledge, Parker Ridge, Sigsbee Ridge, and Cashes and Ammen Basins. And because this relatively small expanse of ocean supports a remarkably rich diversity of habitats and marine life.

I'm sure I don't have to tell you that the Gulf of Maine is overheating, with water temperatures rising faster than 97% of the global ocean. The largely intact benthic habitats and diversity of Cashes Ledge constitute one of the most comprehensive opportunities for biodiversity and climate-stewardship in the Gulf of Maine. As climate impacts in the Gulf of Maine continue to increase, the scientific value and ecological importance of protecting Cashes Ledge as a living laboratory and oceanographic research platform only increases.

The Proposed Sanctuary will provide opportunities for research and to enhance the understanding of climate change impacts in the Gulf of Maine, as well as numerous opportunities to access nature with a broader lens by creating physical and virtual engagement and

collaboration opportunities for communities that would foster understanding of marine habitats, deepening their connection with nature in New England's own backyard.

The sanctuary would have many benefits including addressing the interrelated goals of conserving the rich biodiversity of the Gulf of Maine and building resilience of the Gulf of Maine to the impacts of climate change. This is particularly important since New England and its coastal communities depend on a healthy thriving ocean ecosystem for tourism and commercial and recreational fishing to ecosystem services.

Securing long-lasting protections for this unique New England habitat is essential in our rapidly changing marine environment. I strongly support this nomination and urge you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Yours sincerely,

A handwritten signature in cursive script, reading "S. Santangelo". The signature is written in dark ink and is positioned above the printed name.

Susan L. Santangelo
Biddeford, Maine

RE: Support for Consideration of a Cashes Ledge National Marine Sanctuary

Dear Director Armor,

My name is Sonia DeMarta and I live in Lexington, Massachusetts. I am writing to you in support of the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area.

I want to protect a healthy ocean for future generations because it is the source of life on the planet and without a healthy ocean we won't have a healthy planet.

I grew up on the coast of Venezuela and witnessed the damage done to the ocean by the oil industry, a lack of protection and conservation by the government, and a populace ignorant of the damage, including me. In the bay where we lived our coral reef died, the entire population of seahorses were wiped out, and fish populations crashed, but we ignored that because oil money was pouring into the country. Ocean conservation is important because I wish to protect our ecosystems from what I witnessed in Venezuela.

I worked at The Cousteau Society in my 20's and became more educated about the value of the ocean and the difficulty in protecting it and its inhabitants. With the Cousteau team, my husband and I traveled to Fiji and were able to dive in a pristine ocean environment, something we had never experienced before. For the past 30 years my family and I have spent weeks every August camping on an island off the coast of Deer Isle. In those years we have witnessed the warming of the surrounding ocean, the arrival of green crabs, the disappearance of mussels, and the decrease in seabirds who depend on them. I want to help protect what is left.

I support the nomination to protect the Cashes Ledge area for the following reasons:

- The Cashes Ledge Area is a biodiversity hotspot in the Gulf of Maine harboring a rich diversity of habitats and marine life.
- Cashes Ledge contains all of the seafloor types typical of the offshore Gulf of Maine each supporting its own mix of species.
- It harbors the densest cold-water kelp forest on the eastern seaboard.
- It provides refuge for Maine's astounding diversity of marine life including many endangered species such as the wolffish, blue sponge and red cod. Whales are commonly seen in the area as well.

- It provides scientific research and educational opportunities.
- It would help build climate resilience in a region that is warming faster than 97% of the world's oceans.
- It's largely intact habitats and communities of the Cashes Ledge Area constitute a key opportunity for biodiversity and climate stewardship.

The Cashes Ledge Area warrants protection to ensure that its intricately connected habitats and unique ecosystem can continue to serve as a reserve of ocean biodiversity, productivity, and an offshore ocean laboratory for scientific research. Securing long-lasting protections for this unique New England habitat is essential in our rapidly changing marine environment. I support this nomination and urge you to add Cashes Ledge to the Sanctuary Inventory List and to initiate the public process for its designation as a National Marine Sanctuary.

Sincerely,
Sonia DeMarta
Lexington, MA

Personal Letter of Support

Dear Director Armor,

My name is Wilson Haims and I am writing in support of the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area. I am from Portland, Maine and am 23 years old. As a young person, I see taking action to conserve threatened habitats in New England as an essential step toward promoting a sustainable and livable future in the region.

Growing up in Maine, I spent much of my childhood on the coast. Whether tidepooling or exploring the islands of Casco Bay, I have been curious about marine life from a young age. Now, as a young adult, I have beared witness to extreme change in the state of Maine due to climate change. Shorter winters, more extreme heat in the summers and the knowledge that the gulf of Maine is warming faster than 97% of other bodies of water in the world has catalyzed my commitment to pursue marine conservation issues. Ultimately, I see the nomination and designation of Cashes Ledge as a Sanctuary as a way to ensure the protection of a unique habitat that serves as a nursery for commercially significant species like Atlantic Cod and Haddock, as well as an opportunity to provide refuge for species that have specific habitat requirements to thrive. By safeguarding this Area, we are promoting the type of secure and healthy ecosystems we need to have in order to effectively combat climate change.

Cashes Ledge is a marine mountain range located 90 miles off of Portland. It is home to the most densely populated, deep cold-water kelp forest on the Eastern seaboard and offers opportunities for environmental research and education. Like our terrestrial mountain ranges that we protect and conserve in the form of national and state parks, Cashes Ledge should also be considered a source of regional pride. While the Gulf of Maine has changed dramatically over the past 200 years, Cashes Ledge serves as a glimpse into the past and offers hope for ecological restoration and a prosperous future.

I am writing to you today not only as a marine advocate, but also as a young person who is passionate about the well-being of Maine's future. In order to live in a sustainable and well-balanced world, we need to make bold decisions about where our long-term values lie. By designating Cashes Ledge as a National Marine Sanctuary, not only would we be demonstrating our commitment to protecting natural resources in New England, but we would also be taking one more step toward achieving the ecological stability that will foster a livable future. Thank you for your consideration.

Sincerely,

Wilson Haims, Maine, Earthecho International Ocean Protection Ambassador

July 24, 2024

Dear Director Armor,

Environment America works to protect the places that Americans love and promote core environmental values we share, such as clean air to breathe, clean water to drink, and clean energy to power our lives. Along with our affiliated state groups, we are submitting the attached 13,513 signatures in support of permanently protecting the biodiversity hotspot found in the Cashes Ledge area.

Each of the 13,513 people signed the following letter:

Dear President Biden,

CC: NOAA Administrator Rick Spinrad

Cashes Ledge is a hotspot for whales, dolphins and more, and it needs new protections.

In your America the Beautiful plan, you challenged “all of us as Americans to join together in pursuit of a goal of conserving at least 30 percent of our lands and waters by 2030.”

In the center of the Gulf of Maine, Cashes Ledge is just the place. Within it there are deep, healthy kelp forests. The area is a hotspot for marine life, including threatened and endangered species. It’s one of the last, best places to find Atlantic cod in the Gulf.

Please permanently protect this amazing place, so future generations can marvel at the wonders of nature off our shores.

Sincerely,

The Cashes Ledge area is not only home to one of the Northeast’s healthiest, deepest and densest kelp forests: the site contains an array of habitats that supports diverse ocean life, including whales, seabirds and Atlantic cod. Permanently protecting this national treasure, as the proposed Cashes Ledge National Marine Sanctuary would do, will help ensure this hotspot can adapt and thrive in the face of rising temperatures in the Gulf of Maine.

For this reason, we urge you to accept the nomination and initiate the designation process.

Sincerely,

Kelsey Lamp
Protect our Oceans Campaign Director
Environment America

John Armor, Director
Office of National Marine Sanctuaries
1305 East-West Highway, 11th Floor
Silver Spring, MD 20910

July 24, 2024

Dear Director Armor,

Please find attached a letter we submitted to the White House Council on Environmental Quality on July 19, 2024. The letter is signed by 30 birding groups who support the permanent protection of Cashes Ledge, as it provides important habitat for seabirds.

Sincerely,

Kelsey Lamp
Protect our Oceans Campaign Director
Environment America

July 15, 2024

Dear President Biden,

On behalf of 30 birdwatching and bird habitat conservation organizations, we urge you to permanently protect one of New England's ocean treasures: the incredible underwater mountain range and kelp forest around Cashes Ledge. Protecting Cashes Ledge will enable seabirds that feed in the area to sustain themselves.

As birdwatchers and enthusiasts, birds of all kinds are important to us. They excite us, bring us together, and remind us of our country's beauty. We want nothing more than to see them thrive.

But tragically, populations of American seabirds are in severe decline. Over half of all seabird species found in the U.S. are either of high conservation concern, federally endangered, or are at a tipping point - meaning that 50% of the species population has disappeared since 1970 and another 50% will disappear by 2050.¹ Human activities, like pollution, habitat destruction, and commercial-scale fishing, have contributed to these declines.² If an ocean ecosystem is in trouble, seabirds will be among the first wildlife to signal it as well - and seabirds in the Northern Hemisphere have been struggling to feed themselves. A 2021 study concluded that seabirds will struggle to breed in the Northern hemisphere unless there is an increase in the availability of local food resources.³

Cashes Ledge provides a shining respite for seabirds from these grim trends. Cashes Ledge is an underwater mountain range home to the deepest, densest and healthiest kelp forest in the Gulf of Maine and possibly the Northwest Atlantic. This area is a biodiversity hotspot and hosts all of the types of seafloor environment that can be found in the Gulf of Maine.⁴ Thanks to unique ocean currents, its nutrient rich waters provide the basis for an abundant ecosystem, known to be a hotspot for humpback whales, a feeding ground for seabirds, and for being one of the last best places to find North Atlantic cod in New England.⁵

The prohibition of commercial fishing at Cashes Ledge is another reason why the wildlife is so abundant there. A study has even found the biomass of the fish at Cashes Ledge to be 305 times greater than that of marine areas at Maine's coast.⁶ These strong numbers can help Cashes' seabirds thrive. These seabirds include the Storm Water-Petrel, the Sooty Shearwater, and the

⁴ Kraus, Scott & Auster, Peter & Witman, Jon & Hodge, Brooke & Mckee, Michael & Lamb, Robert. (2016). Scientific Assessment of a Proposed Marine National Monument off the Northeast United States. 10.13140/RG.2.1.1268.1360.

⁵ Witman JD, Lamb RW (2018) "Persistent differences between coastal and offshore kelp forest communities in a warming Gulf of Maine." *PLOS ONE* 13(1): e0189388. <https://doi.org/10.1371/journal.pone.0189388>.

⁶ Ibid.

Great Shearwater among others.⁷ These birds circle Cashes Ledge and dive for the steady numbers of fish swimming in the waters.

However, the protections behind this ecosystem could easily be rolled back. Without these protections, the area could lose the abundance that helps sustain seabirds and all the other ocean life that right now call Cashes Ledge home. A return to more intense fishing efforts could mean seabirds will also be at greater risk of becoming bycatch, perhaps the biggest contemporary contributor to their declines.⁸

To keep this ecosystem a vibrant haven for seabirds and other marine life, we ask you to implement permanent protections for Cashes Ledge. Like national parks on land, when we set ocean places aside from human activities for the conservation of nature, we see ocean life flourish and become more resilient.

Mr. President, in a time of massive species loss, your leadership could make a difference for the seabirds that feed at Cashes Ledge. Permanently protecting this ocean treasure will be an excellent addition to your ocean conservation legacy and is aligned with your commitment to protect the environment. As birders we pride ourselves on being good stewards of the birds that we search for, and the environment they depend on. We hope you join us in our effort to conserve their habitats and allow us to continue our passion.

Thank you for your consideration of this important issue – we hope that we can move forward together to ensure a healthy and abundant future for the seabirds at Cashes Ledge.

John Armor, Director
Office of National Marine Sanctuaries
1305 East-West Highway, 11th Floor
Silver Spring, MD 20910

July 24, 2024

Dear Director Armor,

On behalf of MASSPIRG Students, I am writing to express our support for the nomination of the Proposed Cashes Ledge National Marine Sanctuary to protect the Cashes Ledge Area.

MASSPIRG Students is a student-funded, student-led advocacy organization working on dozens of college campuses across the state on campaigns to protect the environment, make college more affordable, and promote youth civic engagement. Over the past year, we've worked to protect our oceans by advocating to permanently protect the wild, vibrant kelp forest off the coast of New England at Cashes Ledge.

We began advocating for Cashes Ledge because it is important: home to New England's healthiest and deepest kelp forests, Cashes Ledge is a biodiversity hotspot for whales and dolphins, a feeding ground for seabirds, and one of the last, best places to find Atlantic cod in the Gulf. It's a true national treasure.

Permanent protection of this ecosystem will allow this vibrant ocean hotspot to thrive. It will be an investment in the future health of New England's ocean life. Around the globe and here in the U.S., strong protections of ocean ecosystems have been proven to help recover fish populations, protect endangered species and create resilience to natural disasters like marine heat waves. Keeping the Cashes Ledge ecosystem healthy will be critical in building resilience for the whole Gulf of Maine in the face of rising temperatures and other threats.

As we have built support for Cashes Ledge on our campuses, we've seen how much students care about the ocean and the life within it. We've talked to students about the threats facing the Gulf of Maine, and it's clear they care about the whales, the seabirds, about having clean beaches and healthy oceans. Students have taken time out of their day to sign petitions, decorate postcards and attend beach clean ups in honor of this amazing ecosystem.

Over the course of our campaign, we've:

- Gathered over 2,000 petition signatures and letters of support for protecting Cashes Ledge
- Gathered over 500 photo petitions
- Held 6 events in honor of Cashes Ledge, which were attended by over 230 people

- Worked with professors and faculty on a support letter signed by 139 professors, faculty and administrators
- Gathered support from 39 student and youth-serving organizations

Young people recognize that saving the ocean takes more than love. We need to take action to protect what we can, now, so that we can continue to enjoy a vibrant ocean for the rest of our lives, and for generations to come.

As we work alongside our elected leaders to combat climate change, we need to give New England's ocean the best chance at adapting to rising temperatures. Protecting the healthiest marine ecosystems, like those found at Cashes ledge, is a critical tool to create that chance.

Director Armor, young people are going to inherit our ocean. We are looking to you to do what it takes to protect this ocean treasure. That starts by accepting the nomination for the Proposed Cashes Ledge National Marine Sanctuary, and eventually taking the steps needed to ensure this proposal takes its shape on the water.

Sincerely,

A handwritten signature in dark ink, appearing to be 'Dan Hochberger', written on a light-colored background.

Dan Hochberger
Board Chair
MASSPIRG Students
Salem State University.

Highlights from our grassroots support

Fall 2023 Newsletter: Protecting Our Oceans

This semester, one of our top priorities was to protect our ocean, specifically Cashes Ledge, an underwater mountain range 90 miles off the coast of Boston in the Gulf of Maine. It's home to New England's healthiest kelp forests and so many incredible and endangered species, including humpback whales, seabirds, and one of the last largest remaining populations of North Atlantic Cod.

Students across the state took action by signing our petition to call on President Biden to permanently protect Cashes Ledge, as well as a coalition of over 150 faculty, student groups, and businesses. Our awesome awareness events included beach clean-ups, ocean banner making, pumpkin decorating, and trash monster making!

New England Youth Ocean Summit

On April 7, 2024, we held our first ever New England Youth Ocean Summit at UMass Boston to inspire young people to take action to advance key New England ocean conservation initiatives, train ocean lovers in key organizing skills to turn their passion into change, and make real change to protect our oceans. More than 150 people attended the Youth Ocean Summit, including students from Western Mass, UMass Amherst, UMass Dartmouth, Salem State, and UMass Boston, college and university representatives, professionals in their field, and environmental advocates.

Cashes Ledge was one of the featured topics at the Summit. Lydia Churchill with Environment Massachusetts Research and Policy Center moderated a panel on Cashes Ledge with speakers Gareth Lawson from

Conservation Law Foundation and Isha Sangani, Alum with Earth Echo International. Participants also used Cashes Ledge as a case study during the workshop, presented by the Digital Storytelling in Asian American Studies Lab at UMass Boston, on “Telling your Ocean Story.”

The Summit was covered in the UMB student paper, Mass Media.

Photos in support of Cashes Ledge:

Over the course of the year, hundreds of young people stopped to take a photo in support of Cashes Ledge.

Petition: Tell Biden to protect New England's ocean treasure

Dear President Biden,

In your America the Beautiful plan, you challenged “all of us as Americans to join together in pursuit of a goal of conserving at least 30 percent of our lands and waters by 2030.” You made clear that we must “give every child in America the chance to experience the wonders of nature.”

We have just the place for you. In the center of the Gulf of Maine there lies a place known as Cashes Ledge. Within it there are deep, healthy kelp forests, which are a hotspot for whales and dolphins, a winter feeding ground for Atlantic puffins, and one of the last, best places to find Atlantic cod in the Gulf. It's a true national treasure.

Keeping this ecosystem healthy will be critical in building resilience for the whole Gulf of Maine in the face of rising temperatures and other threats.

Please permanently protect this amazing place, so future generations can marvel at the abundant life off our shores.

Sincerely,

CC: NOAA Administrator Rick Spinrad

Petition: Tell Biden to protect New England's ocean treasure

Dear President Biden,

In your America the Beautiful plan, you challenged “all of us as Americans to join together in pursuit of a goal of conserving at least 30 percent of our lands and waters by 2030.” You made clear that we must “give every child in America the chance to experience the wonders of nature.”

We have just the place for you. In the center of the Gulf of Maine there lies a place known as Cashes Ledge. Within it there are deep, healthy kelp forests, which are a hotspot for whales and dolphins, a winter feeding ground for Atlantic puffins, and one of the last, best places to find Atlantic cod in the Gulf. It's a true national treasure.

Keeping this ecosystem healthy will be critical in building resilience for the whole Gulf of Maine in the face of rising temperatures and other threats.

Please permanently protect this amazing place, so future generations can marvel at the abundant life off our shores.

Sincerely,

CC: NOAA Administrator Rick Spinrad

Petition: Tell Biden to protect New England's ocean treasure

Dear President Biden,

In your America the Beautiful plan, you challenged “all of us as Americans to join together in pursuit of a goal of conserving at least 30 percent of our lands and waters by 2030.” You made clear that we must “give every child in America the chance to experience the wonders of nature.”

We have just the place for you. In the center of the Gulf of Maine there lies a place known as Cashes Ledge. Within it there are deep, healthy kelp forests, which are a hotspot for whales and dolphins, a winter feeding ground for Atlantic puffins, and one of the last, best places to find Atlantic cod in the Gulf. It's a true national treasure.

Keeping this ecosystem healthy will be critical in building resilience for the whole Gulf of Maine in the face of rising temperatures and other threats.

Please permanently protect this amazing place, so future generations can marvel at the abundant life off our shores.

Sincerely,

CC: NOAA Administrator Rick Spinrad

Petition: Tell Biden to protect New England's ocean treasure

Dear President Biden,

In your America the Beautiful plan, you challenged “all of us as Americans to join together in pursuit of a goal of conserving at least 30 percent of our lands and waters by 2030.” You made clear that we must “give every child in America the chance to experience the wonders of nature.”

We have just the place for you. In the center of the Gulf of Maine there lies a place known as Cashes Ledge. Within it there are deep, healthy kelp forests, which are a hotspot for whales and dolphins, a winter feeding ground for Atlantic puffins, and one of the last, best places to find Atlantic cod in the Gulf. It's a true national treasure.

Keeping this ecosystem healthy will be critical in building resilience for the whole Gulf of Maine in the face of rising temperatures and other threats.

Please permanently protect this amazing place, so future generations can marvel at the abundant life off our shores.

Sincerely,

CC: NOAA Administrator Rick Spinrad

Petition: Tell Biden to protect New England's ocean treasure

Dear President Biden,

In your America the Beautiful plan, you challenged “all of us as Americans to join together in pursuit of a goal of conserving at least 30 percent of our lands and waters by 2030.” You made clear that we must “give every child in America the chance to experience the wonders of nature.”

We have just the place for you. In the center of the Gulf of Maine there lies a place known as Cashes Ledge. Within it there are deep, healthy kelp forests, which are a hotspot for whales and dolphins, a winter feeding ground for Atlantic puffins, and one of the last, best places to find Atlantic cod in the Gulf. It's a true national treasure.

Keeping this ecosystem healthy will be critical in building resilience for the whole Gulf of Maine in the face of rising temperatures and other threats.

Please permanently protect this amazing place, so future generations can marvel at the abundant life off our shores.

Sincerely,

CC: NOAA Administrator Rick Spinrad

Dear Biden Administration,

- ① If I was a crab and somebody took away my kelp forest I would be very upset. If crabs could own property they would, in the kelp forest.

- ② If I was a shark and somebody took away my dining hall (kelp forest) I would be very sad.

- ③ If I was a cod and somebody took away my hangout spot (kelp forest) I would find it extremely uncool.

Please protect Cashes Ledge.

Thank you,

Karen (College student)
(technically)

Owenn Myka-Smith

Hello President Biden,
My love for the ocean comes from its importance to loved ones in my life, specifically in the fishing economy. The protection of cashes ledge would support the fishing economy, and allow future generations to enjoy and utilize this beautiful resource. I am so happy with your 30 by 30 commitment, and I hope that you take Cashes ledge as part of that 30%. E

Dear Biden Administration,

Growing up in the northeast, the ocean has been a part of my life as well as a passion from a young age. From the coasts of Cape Cod to the coasts of Maine, I have always admired the biodiversity and mysteries of the Atlantic ocean. In my hometown of New Hampshire, I have seen how strongly our local water bodies are protected. Any boats that enter have to remove all algae from their boats to avoid contaminating the lake with an invasive species. Any dumping is strictly prohibited, and fishing is strictly regulated.

These regulations are what allowed my town's lake to remain a clean, thriving environment for marine life. I am writing to urge you to designate Cashes Ledge as a protected area of the ocean, so that even in the distant future it remains a vibrant and thriving ecosystem. Thank you for your efforts thus far on the 30 by 30 pledge.

Rennus Morris New Hampshire

Dear President Biden

I grew up in Vermont - a notably landlocked state. I visited lakes & rivers, and even the ocean once as a child while visiting family in Maine, but I didn't go out on the ocean until June of 2022, while visiting Provincetown with my parents. My mother had purchased tickets to a Whale Watch as a surprise, and we rode out on the ocean for the first time. We went to the Stellwagen Bank National Marine Sanctuary, a thriving protected marine ecosystem. The first time I saw a whale, I broke down crying in awe. It was a mother whale and her calf, both swimming alongside the boat for around twenty minutes. The ~~watch~~ watch was about 3 hours, but it felt short. We saw nearly half a dozen whales, several dolphins, and a few seals - the protected environment allowed these animals to live and thrive. The protection of Cashes Ledge would allow it to thrive in the same

way, and allow humpback, minke,
and fin whales to thrive.
The Gulf of Maine is already
warming ~~much~~ faster than 96%
of world oceans, ~~and~~ which
is putting stress on New
England's already strained ecosystem.
I thank you for your 30x30
pledge, and think Cashes Ledge
would make a wonderful addition
to this goal.

Thank you for your time,
Puck Bell, Boston MA UMass Boston

Protect Cashes Ledge!

PROTECT
CASHES
LEDGE!
(please)

Cashes Ledge is home to
a myriad of biodiversity
including kelp and one
of the last largest populations
of North Atlantic Cod.
Without protection then
damage to this place will
become irreversible. Life so
beautiful would cease to
exist. That is why you
and your administration
MUST PROTECT CASHES LEDGE!!!

Compared to the preservation
of natural beauty on land, the
oceans are very much neglected.
This may be because on its
surface a dead ocean looks exactly
the same as a living one. But
the vibrancy of living and thriving
marine ecosystems such as
Cashes Ledge easily compares
to any national park. And just
as deserving of protection.

Rick Spinrad

Under Secretary of Commerce for Oceans and Atmosphere, NOAA Administrator
National Oceanic and Atmospheric Administration
1401 Constitution Avenue NW, Room 5128
Washington, DC 20230

*Cc: Miriam Goldstein, Director of Ocean Policy at the White House Center for Environmental Quality;
John Armor, Director of the Office of National Marine Sanctuaries*

Dear Administrator Spinrad:

As educators, researchers, scientists and faculty, we urge you to permanently protect one of New England's ocean treasures: the incredible underwater mountain range and kelp forest around Cashes Ledge.

From rising global temperatures to declining biodiversity, our ocean is at risk. The decisions we make in the coming years will be the difference between an abundant and livable planet, and something far worse. As we work to build a better future for our environment, our climate and our communities, we look to our leaders to preserve this future. As you work to implement your America the Beautiful initiative, we urge you to protect more of our country's most important ocean places.

Places like Cashes Ledge.

Found off the coast in the middle of the Gulf of Maine, about 90 miles from Boston, Cashes Ledge is an underwater mountain range home to the healthiest and deepest kelp forest in the Gulf of Maine and possibly the Northwest Atlantic. The area is a biodiversity hotspot and hosts all of the types of oceanic habitat that can be found in the Gulf of Maine.¹ Thanks to unique ocean currents, its nutrient rich waters provide the basis for an abundant ecosystem. Cashes is known to be a hotspot for humpback whales, a feeding ground for seabirds, and one of the last best places to find North Atlantic cod.²

The ecosystems found around Cashes Ledge are incredible, and in part, have remained so because they currently enjoy some protections from commercial fishing. These protections have allowed the kelp forest to thrive, as cod and other large predators act to prevent overgrazing of the kelp by animals such as sea urchins and crabs.³

¹ J. H. Churchill, J. P. Kritzer, M. J. Dean, J. H. Grabowski, G. D. Sherwood, Patterns of larval-stage connectivity of Atlantic cod (*Gadus morhua*) within the Gulf of Maine in relation to current structure and a proposed fisheries closure, *ICES Journal of Marine Science*, Volume 74, Issue 1, January-February 2017, Pages 20–30, <https://doi.org/10.1093/icesjms/fsw139>.

² Kraus, Scott & Auster, Peter & Witman, Jon & Hodge, Brooke & Mckee, Michael & Lamb, Robert. (2016). Scientific Assessment of a Proposed Marine National Monument off the Northeast United States. 10.13140/RG.2.1.1268.1360.; National Audubon Society (2016) "Audubon Scientists Uncover Winter Home of Maine Atlantic Puffins" <https://www.audubon.org/news/audubon-scientists-uncover-winter-home-maine-atlantic-puffins>; Witman JD, Lamb RW (2018) "Persistent differences between coastal and offshore kelp forest communities in a warming Gulf of Maine." *PLOS ONE* 13(1): e0189388. <https://doi.org/10.1371/journal.pone.0189388>

³ Witman, J.D. and K.P. Stebens. 1992. Regional Variation in Fish Predation: A Historical Perspective in the Gulf of Maine. *Oecologia* 90: 305-315.

But the existing protections are not permanent and could be rolled back at any time by fishery managers. Losing this amazing place would sell-short the future of the ocean life we love, and the marine ecosystem that has made New England so unique.

Permanently protecting this special place will not only safeguard its ocean life, it will also benefit our work to understand marine systems off our shores. The diverse and comparatively-intact ecosystems found around the Cashes Ledge complex provide an unparalleled opportunity for scientific and education efforts around the rapidly warming Gulf of Maine. Setting aside this area would create a living laboratory that can help us understand the larger Gulf of Maine ecosystems and the tools to better manage these places.

As we work to understand our natural world and inspire the next generation of scientists, educators, leaders and community members, we are looking to you to do what you can today to protect and restore a vibrant, abundant ocean. Permanently protecting this ocean treasure will be an excellent addition to your ocean conservation legacy, and is aligned with your vision for America the Beautiful.

Thank you for your consideration of this important issue--we hope that we can move forward together to ensure a healthy and abundant future for the unique ocean ecosystems at Cashes Ledge.

Sincerely,

Under Secretary of Commerce for Oceans and Atmosphere, NOAA Administrator
National Oceanic and Atmospheric Administration
1401 Constitution Avenue NW, Room 5128
Washington, DC 20230

Cc: Miriam Goldstein, Director of Ocean Policy at the White House Center for Environmental Quality; John Armor, Director of the Office of National Marine Sanctuaries

Dear Administrator Spinrad,

On behalf of 39 student and youth-serving organizations, we urge you to permanently protect one of New England's ocean treasures: the incredible underwater mountain range and kelp forest around Cashes Ledge.

Our generation is facing an uncertain future – from rising global temperatures to falling biodiversity, the decisions we make in the coming years will be the difference between an abundant and livable planet and something far worse. As we work to build a better future for our environment, our climate and our communities, we look to our leaders to join us in the fight to preserve this future. That's why we are urging you to act to protect more of our country's most important ocean places, including Cashes Ledge.

Found off the coast in the middle of the Gulf of Maine, about 90 miles from Boston, Cashes Ledge is an underwater mountain range home to the deepest, densest and healthiest kelp forest in the Gulf of Maine and possibly the Northwest Atlantic. This area is a biodiversity hotspot, and hosts all of the types of oceanic habitat that can be found in the Gulf of Maine.¹ Thanks to unique ocean currents, its nutrient rich waters provide the basis for an abundant ecosystem, known to be a hotspot for humpback whales, a feeding ground for puffins, and for being one of the last best places to find North Atlantic cod.²

The ecosystems found around Cashes Ledge are incredible, and in part, have remained so because they currently enjoy some protections from commercial fishing. These protections have allowed the kelp forest to thrive, as cod and other large predators act to prevent overgrazing of the kelp by animals like sea urchins and crabs.³

¹ J. H. Churchill, J. P. Kritzer, M. J. Dean, J. H. Grabowski, G. D. Sherwood, Patterns of larval-stage connectivity of Atlantic cod (*Gadus morhua*) within the Gulf of Maine in relation to current structure and a proposed fisheries closure, ICES Journal of Marine Science, Volume 74, Issue 1, January-February 2017, Pages 20–30, <https://doi.org/10.1093/icesjms/fsw139>.

² Kraus, Scott & Auster, Peter & Witman, Jon & Hodge, Brooke & Mckee, Michael & Lamb, Robert. (2016). Scientific Assessment of a Proposed Marine National Monument off the Northeast United States. 10.13140/RG.2.1.1268.1360.; National Audubon Society (2016) "Audubon Scientists Uncover Winter Home of Maine Atlantic Puffins" <https://www.audubon.org/news/audubon-scientists-uncover-winter-home-maine-atlantic-puffins>; Witman JD, Lamb RW (2018) "Persistent differences between coastal and offshore kelp forest communities in a warming Gulf of Maine." PLOS ONE 13(1): e0189388. <https://doi.org/10.1371/journal.pone.0189388>

³ Witman, J.D. and K.P. Stebens. 1992. Regional Variation in Fish Predation: A Historical Perspective in the Gulf of Maine. *Oecologia* 90: 305-315.

But these protections are not permanent, and could be rolled back at any time by fishery managers.

Losing this amazing place would sell short the future of the ocean life we love, and the marine ecosystem that has made New England so special.

To ensure that Cashes Ledge stays intact, we need you to set aside the area from destructive human activities, permanently. Like national parks on land, when we set ocean places aside for the conservation of nature, we see ocean life recover and become more resilient. Permanently protecting this ocean treasure will be an excellent addition to your ocean conservation legacy, and is aligned with your vision for America the Beautiful.

Thank you for your consideration of this important issue – we hope that we can move forward together to ensure a healthy and abundant future for the unique ocean ecosystems at Cashes Ledge.

Our generation is facing an uncertain future – from rising global temperatures to falling biodiversity, the decisions we make in the coming years will be the difference between an abundant and livable planet and something far worse. As we work to build a better future for our environment, our climate and our communities, we look to our leaders to join us in the fight to preserve this future. That's why we are urging you to act to protect more of our country's most important ocean places, including Cashes Ledge.

Found off the coast in the middle of the Gulf of Maine, about 90 miles from Boston, Cashes Ledge is an underwater mountain range home to the deepest, densest and healthiest kelp forest in the Gulf of Maine and possibly the Northwest Atlantic. This area is a biodiversity hotspot, and hosts all of the types of oceanic habitat that can be found in the Gulf of Maine.¹ Thanks to unique ocean currents, its nutrient rich waters provide the basis for an abundant ecosystem, known to be a hotspot for humpback whales, a feeding ground for puffins, and for being one of the last best places to find North Atlantic cod.²

The ecosystems found around Cashes Ledge are incredible, and in part, have remained so because they currently enjoy some protections from commercial fishing. These protections have

¹ J. H. Churchill, J. P. Kritzer, M. J. Dean, J. H. Grabowski, G. D. Sherwood, Patterns of larval-stage connectivity of Atlantic cod (*Gadus morhua*) within the Gulf of Maine in relation to current structure and a proposed fisheries closure, *ICES Journal of Marine Science*, Volume 74, Issue 1, January-February 2017, Pages 20–30, <https://doi.org/10.1093/icesjms/fsw139>.

²Kraus, Scott & Auster, Peter & Witman, Jon & Hodge, Brooke & Mckee, Michael & Lamb, Robert. (2016). Scientific Assessment of a Proposed Marine National Monument off the Northeast United States. 10.13140/RG.2.1.1268.1360.; National Audubon Society (2016) "Audubon Scientists Uncover Winter Home of Maine Atlantic Puffins"

<https://www.audubon.org/news/audubon-scientists-uncover-winter-home-maine-atlantic-puffins>; Witman JD, Lamb RW (2018) "Persistent differences between coastal and offshore kelp forest communities in a warming Gulf of Maine." *PLOS ONE* 13(1): e0189388. <https://doi.org/10.1371/journal.pone.0189388>

allowed the kelp forest to thrive, as cod and other large predators act to prevent overgrazing of the kelp by animals like sea urchins and crabs.³

But these protections are not permanent, and could be rolled back at any time by fishery managers.

Losing this amazing place would sell short the future of the ocean life we love, and the marine ecosystem that has made New England so special.

To ensure that Cashes Ledge stays intact, we need you to set aside the area from destructive human activities, permanently. Like national parks on land, when we set ocean places aside for the conservation of nature, we see ocean life recover and become more resilient. Permanently protecting this ocean treasure will be an excellent addition to your ocean conservation legacy, and is aligned with your vision for America the Beautiful.

Thank you for your consideration of this important issue – we hope that we can move forward together to ensure a healthy and abundant future for the unique ocean ecosystems at Cashes Ledge.

Sincerely,

Eugene Katuramu
